Rev. B. Tyrwhitt, East Lockinge, says, "The want "of efficient teachers, able to read well and possessed "of the great gift of teaching. The indifference of "plough-boys to that which costs money and brings "no immediate gain; even a halfpenny a night is "something out of their wages. This is what I "charge at *Lockinge*, finding them everything, as "pens, &c., but copy-books. Bad example of older "lads. Our carter boys take their meals together "in a cottage kept for that purpose, sleeping over "the stables. If the oldest is ignorant and careless "about school, all the rest follow his advice. An "under carter is an oracle to small plough-boys. "The facility of staying out till late at night and "returning to the stables to sleep unperceived. "Entire ignorance of reading, and parental indiffer- "ence to learning."

Rev. H. A. Dodd, Sparsholt, says, "Boys and "young men after a hard day's labour in the field, "prefer their liberty to close confinement in a "night-school."

Rev. Thos. A. Houblon, Peasemore, says, "There "not being sufficient inducement for the boys to be "regular."

Rev. W. J. Butler, Wantage.—"In Wantage we "have never been satisfied with the evening school "results. The lads come for a few weeks; then "become irregular, and finally the school generally "consists of those who least require instruction. It "is very difficult to find anyone to take efficient

j.

" charge of it. The stereotyped subjects are reading, " writing, and summing, and any attempt to pass " from these to some more advanced subject, as " drawing, history, music, or the like, is disapproved " by the lads themselves. They are phlegmatic, and " have no enthusiasm or taste. Of course there are " exceptions to these, but the rank and file, who " make up the school, are as I have described them. " Our national schoolmaster, who is a good draughts- " man and teacher, and has gained the certificates in " the subjects prescribed by the Society of Arts, " tried to get up a class of drawing pupils, but it " very quickly fell to pieces. Mind in a district " seems like a soil, it requires many years of regular " working to bring it to fertility."

Mr. E. W. Moore, Coleshill, says, "All persons " needing it take advantage of it here."

Rev. T. H. Bushnell, Beenham, says, "A good " staff of teachers."

Rev. T. Stevens, Bradfield, says, "The want of " teachers, as in a night-school I think a master or " teacher cannot attend to as many scholars as in a " day-school."

Rev. Jas. Fraser, Ufton, says, "There would " probably—almost certainly—be no night school in " the parish, if the clergyman did not take an interest " in it; and it would probably become a scene of dis- " order if he did not actually superintend and teach " it. There has been an evening school in Ufton " every winter but two for the last 12 or 14 years. " It has always been conducted by the rector. The " attendance, which is stimulated by the promise of " a prize to every scholar who attends 40 nights out " of the 48, is remarkably regular. Some of the " scholars come from a distance of nearly two miles. " Even this wet season has hardly diminished the " attendance at all. The scholars pay 2*s.* for the " whole course, *i.e.*, at the rate of $\frac{1}{2}d.$ per night."

Mr. Higgs, schoolmaster, Bearwood, says: — " Reluctance of those to attend who are very igno- " rant; and lads who leave the day school before 10 " years of age are generally too tired for instruction " after a hard day's work. What is wanted is Govern- " ment aid to all poor country schools (providing they " produce the results); education will then spread " rapidly through the length and breadth of Eng- " land."

Rev. Thos. Mozley, Finchampstead, says:—"The " difficulty of finding a master. I think the school- " master has done enough, and ought not to undertake " an evening school. The want of a proper room if " there be a school. The want of, say, 12*l.* 12*s.* for " the six winter months."

BERKSHIRE EVIDENCE.

APPENDIX B.

Berkshire.
B.

Nos. 1 to 65.

CONTAINING answers given in 85 circulars of inquiry to Longer Circular question.

37. Give a general description of the cottages in your parish in respect of,—1. Construction (including size of rooms, ventilation, and drainage). 2. Accommodation (including number of rooms in proportion to the family, water supply, garden, outhouses, &c.). 3. Ownership; *i.e.*, whether by landowner, or by tradesmen with whom the tenants are obliged to deal, or by other person or persons. 4. Rent.

And Shorter Circular questions 9 and 10. What is the condition of the cottages in your parish and neighbourhood? Are they sufficient for the supply of the labour required? Are they conveniently situated with respect to the farms? Are they overcrowded, and have any evil results to morality come under your notice in consequence? Are they well supplied with water, and well ventilated?

Have all the cottages in your parish and neighbourhood good gardens, or, in default of gardens, have all the cottages allotments of land conveniently situated for the use of the labourers and their families?

Evidence as to the wages and earnings of agricultural labourers and their families. Evidence given by the labouring class themselves and such other evidence as is peculiar to the parish from which it comes.

WANTAGE UNION.

1. Aldworth - Pop., 275 - Acr. 2,000.
The cultivation is chiefly arable.

Rev. F. Ll. Lloyd, says of the cottages, "They vary " very much; some are owned by landlords, some by " tradesmen, others by the occupiers."

1*a*. *Mr. Dewe*, occupier, says, "I have employed two " boys from Wantage workhouse, they were 13 years " old when they came to me. I paid two of my carters " 1*s.* a week each to teach the boys; they came to me " in June, and at the Michaelmas hiring one of the " carters objected to be hired again if I gave him the " same boy as a driver. I was obliged to keep these " boys doing the work of boys two or three years " younger; one of them is still with me and at 16 can- " not hold a plough. Of the five lads between 13 and 18 " whom I employ, two are under-carters, two are team " drivers, and one shepherd's assistant. Of 12 men, " two are carters, and three others are hired by the " year. The cost of labour on my farm is from 32*s.* " to 34*s.* per acre (34*s.* last year)."

2. Ardington - Pop., 354 - Acr. 1,775.
Cultivation arable chiefly.

Rev. R. Barnes, says, "Most of the cottages have " been lately rebuilt or repaired, with ample accom- " modation for families; all have two or three bedrooms " and needful offices, allotments for almost every cot- " tage, with gardens also in many cases. Three-fifths " of the cottages belong to the landed proprietor, who " is removing all his old and insufficient cottages. " The rent below that of the cottages held by small " owners in neighbouring villages. There is no lack " of cottages for the agricultural population."

3. Beedon - Pop. 317 - Acr. 2,004.
Cultivation arable chiefly.

Rev. T. J. Heard, says "The 66 cottages in the " parish, I should describe as 38 good, 12 middling, " 6 bad, 10 very bad. The good cottages have for the " most part tolerable sized rooms and are fairly ven- " tilated and drained. The middling and bad ones " are the reverse, and some have only one bedroom. " In some cases the largest families have the smallest " and worst cottages. In this district water is scarce " and hard to get at; there are only seven wells for " the use of the poor of the parish. I should like to " see a law passed in reference to cottage building for " the working classes. It ought to require at least two " bedrooms to every cottage, and insist on a minimum

" amount of cubic space for living and bedrooms, " proper ventilation, drainage, water supply, and " privies. Nearly all the cottages are owned by the " landowner, Col. R. L. Lindsay, M.P. The highest " rent is 2*l.*, lowest, 1*l.*, average 1*l.* 10*s.*"

3*a*. *Mr. John G. King*, occupier and guardian (occupying the whole parish, of which he rents 1,170 acres). "I think boys should not be employed under 10 years " of age; they begin with us as carter-boys after doing " a little pig-minding or bird-keeping. I never em- " ploy them under 10; but I think any restriction after " that age would be injurious both to parents and " employers, for as soon as they become plough-boys " they are employed throughout the year. Nearly all " the labourers' wives work in the fields, some of them " all the year round. If a man has a large family and " one child is big enough to look after the others we " employ the mother all through the year. Since " Lord Overstone bought his estate in Beedon parish " in 1856, a great improvement has been made in the " cottages, and is still going on; before he bought it " the cottages were in a very bad condition. Queen's " College, Oxford, owns about 150 acres, and has " one cottage besides the old farm house which is let " as cottages. Cottage rents with a garden of about " 20 poles, sometimes more, vary from 25*s.* to 40*s.* a " year; and besides the garden each cottage has an " allotment of 16 poles at 2*s.* a year. They are better " off than if the cottages and land belonged to them. " We have a night school taught by the parish clerk, " (Mr. King pays him, G.C.) and the boys attend well. " The day school is kept by subscription; the parents " pay 1*d.* each for one child and ½*d.* each for all " others. Our men are as well off as cheap cottages, " good allotments, and the absence of a public house " can make them; they are better off than in the " adjoining parish of Hampstead Norris, the only " difference in our favour being that there is no public " house here. An able-bodied man ought to and does " earn on my farm about 17*s.* a week for the year. " My labour bill exclusive of carpenter and black- " smiths' accounts and beer, which costs me rather " over 100*l.* a year, amounts to 32*s.* per acre. I pay " my carpenter 17*s.* a week and give him a free house " and garden."

3*b*. Allotment award, dated July 26th, 1855.

By award inclosing Beedon Common the Commissioner did set out, allot, and award to the churchwardens and overseers of the poor of the said parish of Beedon a plot of land containing eight acres, to be held by them and their successors in trust as an allotment for the labouring poor of the said parish of Beedon.

And by the same award the said allotment of eight acres was exchanged for an old inclosure belonging to Sir John Read, containing 2*a.* 3*r.* 25*p.* and the said old inclosure was to be held by the said churchwardens and overseers, in trust as an allotment for the labouring poor of the said parish of Beedon, subject nevertheless to and chargeable with a clear rentcharge of 4*l.* to the said Sir J. Read and Queen's College, the owners of another estate in Beedon as therein mentioned.

4. Blewbury - Pop., 639 - Acr., 4,115.
Cultivation chiefly arable.

Rev. J. Macdonald says, " Some of the cottages, " most of them indeed, are very fair, better inside " than their appearance would warrant; but there are " three or four that are a sad exception, as they are " much overcrowded. Nearly all the cottages have " gardens and good water supply. Most of them " belong to the landowner, a few to the farmers, and " others, three or four, belong to tradesmen. The " tenants are not, however, compelled to deal with " their landlords. Rents vary from 2*l.* to 4*l.* and " upwards."

4*a*. *Mr. R. Robinson*, occupier, says of the cottages, " They are very fair, are sufficient for the supply of " labour required, are conveniently situated with " regard to the farms, are not overcrowded, and are " well supplied with water. They have all gardens."

Wages.

4*b*. Mr. Robinson thus estimates wages:—

Men attending cattle receive from 2*l.* to 4*l.* at Michaelmas.

Ordinary wages vary from 10*s.* to 13*s.* a week.

Men earn 2*s.* to 3*s.* extra when at piece work.

In hay time they are paid extra 6*d.* a day and one gallon of beer. In harvest they are paid 3*s.* 6*d.* a day and one gallon of beer.

5. Brightwaltham - Pop., 450 - Acr., 2,038.
Cultivation chiefly arable.

Rev. F. L. Currie says, " The cottages are for the " most part old and badly constructed. Drainage fair. " Accommodation bad; few have two sleeping rooms, " none three. Water supply good. Gardens good. " The cottages are almost entirely owned by one " squire. Rent from 2*l.* to 3*l.* per annum."

5*a*. *Mr. Thos. Angell Sharps*, occupier: " The con- " dition of the cottages is unsatisfactory. There are " not sufficient of them to supply the labour required. " They are conveniently placed. They are over- " crowded. They are not well supplied with water. " They are well supplied with gardens or allotments."

Boys' Hiring.

5*b*. *Mrs. Hazel* (husband a farm labourer): " My " eldest boy is 11; he was hired by the year for the " first time at Michaelmas last. He gets 3*s.* a week " and 1*l.* at Michaelmas. He's well paid for his age." [Mrs. Hazel's cottage has one bed room on the ground floor. Next it are two very poor thatched cottages.—G. C.]

Cottages.

5*c*. *Joshua Parrott*, a son of 26, a daughter, 19, and two nephews, 13 and 15, in a cottage with one bedroom.

5*d*. *George Slade*, three sons and one daughter, all grown up, in one bedroom. " Most like pigs, sir."

Boys' Hiring.

5*e*. *George Collins* (a very intelligent boy): "I'm 11 " years old, and I've been at work three years. I " went to school one half-year after I went to work. " I went 'pig keeping' at first; now I'm hired by the " year. I get 3*s.* 6*d.* a week and 35*s.* at Michaelmas."

6. Catmore - Pop., 121 - Acr., 696.

Rev. T. G. Onslow: " The cottages have kitchen, " back kitchen, and two bedrooms. Landowner is the " proprietor of cottages. Rent 26*s.* per annum."

State of Education.

6*a*. *Joseph Chapman* (on the road with a team, his son as driver): " My boy is going in his 12. He can't " read nor write, no more can't I, no more can't his " mother. I wish we could."

7. Chaddleworth - Pop., 539 - Acr., 3,322.
Cultivation chiefly arable.

Rev. E. Thompson says, " The ventilation and " drainage of the cottages is bad. Many cottages " have only one bedroom. They are owned by land- " owner. The rents are moderate."

7*a*. *P. Wroughton, Esq.*, landowner, says, " The cot- " tages are in good repair, clean and comfortable. " They are quite sufficient for the supply of labour, " and every good labourer is sure of being able to find " employment. They are situated conveniently with " respect to the farms. They are not overcrowded, " and no lodgers being allowed in my cottages, evil " results to morality are of very rare occurrence. " There are wells situated conveniently to the cot- " tages. The cottages are well supplied with means

Berkshire.
Mr. Culley.
B.
j.

" of ventilation, which perhaps are not taken advan-
" tage of sufficiently. Every cottage on my property
" has a plot of ground *attached to it* for a garden."

7*b*. *Mr. John Hedley*, bailiff, Woolley Park: " I have
" managed the home farm at Woolley Park for three
" years. Previous to that I had been in the same posi-
" tion in Northumberland for 30 years. There is a
" great difference between the labourers here and in
" Northumberland. I would much rather pay a North-
" umbrian hind 16*s*. a week than a Berks carter 12*s*.
" I have one Northumbrian as a carter foreman, what
" you would call a ploughman steward. He has 17*s*.
" a week, besides his cottage free, say 18*s*. a week ;
" and he is worth the wage. I plough with two horses
" abreast and use short carts instead of waggons. You
" will see in Mr. Wroughton's field four ploughs going,
" with eight horses and four men, and over the fence
" on another farm four ploughs with 12 horses, and
" four men and four boys, on the same kind of land,
" our ploughs doing the work quicker. There is
" nothing in the northern system beats the southern
" so much in as the management of horses. Our
" horses are kept in the stable, our neighbour's lie out
" in a yard ; our horses are well fed, and two of them
" do more work than three of the neighbour's, and
" we don't require the ploughboy. It would be a far
" better system if the ploughman had charge of his
" horses as ours have, and received the boy's wages in
" addition to his own, the boy remaining at school.
" The only difficulty I have in arranging the two-horse
" system is that we have no cottages for ploughmen.
" A ploughman cannot take charge of his two horses
" unless he lives on the farm premises, and seven or
" eight horses are handed over to one man's care as
" soon as work is over. The greatest difficulty here
" with men, especially day men, is to keep them
" from beer. If a man earns extra wages at any-
" thing he takes it to the beershop. The system of
" giving beer is bad. Men are so inferior here that
" we are obliged to employ more than you do in the
" north."

8. East Challow - Pop., 391 - Acr., 1,289.
Cultivation is mixed.

Rev. G. Purdue says, " Many of the cottages are
" badly built. The bedrooms are small. Ventilation
" imperfect. Drainage fair. Accommodation very
" bad. Water supply fair. Gardens few near cot-
" tages. There are allotments. Outhouses bad.
" There are 67 cottages in East Challow ; 24 belong
" to landowners, 43 to tradesmen or small owners.
" The rents are very high, from 2*s*. 6*d*. to 1*s*. 4*d*. per
" week."

8*a*. [Mr. Purdue rents six acres of land and sublets it at a moderate rent in allotments of 20 and 10 poles each, sufficient provision in this respect not being made by the landowners.—G. C.]

8*b*. *Michael Elliott*, with his wife and eight children, occupy a cottage with one bedroom, a thatched cottage in bad repair, for which he pays 1*s*. 4*d*. a week. He rents an allotment of 20 poles.

Eldest boy, 16, has 4*s*. a week and 30*s*. at Michaelmas ; second boy, 14, has 3*s*. 6*d*. a week and 30*s*. at Michaelmas.

None of Elliott's children are now at school, and the eldest girl of 11 has never been at any school. Elliott thinks 20 poles quite sufficient garden ground for a labouring man.

8*c*. *Mrs. Charles Payne* : " My husband is a 'fog-
" ger.' He gets 12*s*. a week and 1*s*. extra for Sundays,
" but no victuals. He earns no more during the twelve
" months, except at harvest, when he gets 6*d*. a day
" for milking, and earns what he can besides ; be-
" tween us in harvest about 17*s*. or 18*s*. a week for about
" three weeks, when we work as long as we can see.
" With extra victuals and beer the harvest money is
" little better than the weekly wage. We have four
" children, and our weekly expense is about as fol-
" lows :—

	s.	*d.*
Rent of cottage with one bedroom	1	4
Children's school fees - - -	0	3
Clothing club - - - -	0	4
Bread - - - - -	5	6
Flour - - - - -	0	7
Suet - - - - -	0	3½
Cheese, 1 lb. - - - -	0	9
Tea and sugar - - - -	1	8
Bacon, 2½ lbs. - - - -	2	1
Lard, 1 lb. - - - - -	0	11
Candles, 1½ lb. - - - -	0	10½
Coals, 1 cwt. (from the coal club) -	1	1
Soap, soda, and starch - - -	0	3½
	15	11½

" Last week we had only 14*s*. 6*d*. coming in, as I only
" earned 1*s*. 6*d*. For about six months in summer
" besides harvest I can earn on an average 3*s*. a week
" at 8*d*. a day (3*l*. 12*s*.). We rent 20 poles of garden,
" for which we pay 9*s*. a year. My husband goes 1½
" miles to his work, and he hasn't a pint of beer in
" the week."

8*d*. Mrs. Payne has four children, eldest 10, all at school. The total earnings of the family in field work would be, according to her account—

	£	*s.*	*d.*
Husband, 13*s*. a week for 49 weeks	31	17	0
Wife, besides harvest - - -	3	12	0
Man and wife in harvest (including milking pay) - - - - -	3	3	0
	£38	12	0

rather over 14*s*. 10*d*. a week, whilst she estimates the weekly expenditure at about 16*s*. An average winter earning of 1*s*. 6*d*. a week by the wife would reduce the deficit for the year from 3*l*. to 8*s*.

8*e*. *Mrs. Moby :* " My eldest son has 12*s*. a week,
" and he gives me 6*s*. for keeping him. If he lodged
" elsewhere he would have to pay 8*s*. I have a son of
" 13 at Wantage school."

8*f*. The Assistant Commissioner visited four cottages with one bedroom each and no back door in a very confined passage. In one of these cottages, sleeping in one bedroom are a man and his wife, seven of their children (most of them grown up), and two illegitimate grandchildren. This cottage was ornamented with pictorial sheets of the " Police News," a very fashionable paper for the walls of ill-kept cottages.

9. West Challow - Pop., 192 - Acr., 697.
Cultivation is mixed.

Rev. G. Purdue says of the cottages,—" Construc-
" tion, good ; size, different, some 20 × 18 ; nearly all
" have two bedrooms, some three. The water supplied
" is good. All have gardens and allotment gardens.
" 27 are the property of the landowners, four belong
" to the owner of a mill. Rent about 1*s*. per week,
" some as low as 9*d*."

9*a*. The Assistant Commissioner visited a number of roomy old cottages in this village, which is a great contrast to East Challow, both as to the accommodation and condition of the cottages and the manner in which they are kept by the occupiers. Besides the fact that the people are all pretty regularly employed and that the cottages belong to the chief landowner (though not resident), there is no public house in the village.

10. Childry - Pop., 504 - Acr., 2,900.
Cultivation chiefly arable.

Rev. S. Whittingham, D.D., says, " The drainage
" in this parish is being very much improved. Water
" supply is bad in some cottages. The cottages are
" owned by landowners, farmers, and tradesmen.
" Rents vary from 1*s*. to 1*s*. 4*d*., &c. Many of the
" cottages are very deficient in accommodation ; no
" fire-place up stairs, no back places, no garden. In
" short miserable cottages."

10*a*. *Mr. John Burson*, occupier, says, "The cottages "are sufficient as to number, but are not conveniently "situated as to the farms, nor large enough in many "instances. There are gardens or allotments to all "the cottages."

10*b*. The following additional evidence was given by Dr. Whittingham.

"Amongst my other omissions I did not mention that the women had sometimes to go two miles and a half to their agricultural work. In the village they are employed 'sheening' as they call it, forking the straw from thrashing machines. The Wesleyan school will not open till next week, I believe. I had at the Sunday school last Sunday evening 28 boys and 17 girls, all under 13 years. The master of the boys' school is appointed by Queen's College, Oxford; he receives 50*l*. a year and a good house. Owing to the severity of the present master the children attend badly, and a good many children were taken away. I have written twice to the Bursar of Queen's in consequence of complaints from the village. The late master had 25 boys, the present one had only one boy left before Christmas; the girls' school has about 30 girls."

10*c*. The following account of the Fetyplace endowment at Childrey is extracted from the "Parochial topography of the hundred of Wantage," by W. N. Clarke, printed at Oxford in 1824.

"William Fetyplace, Esq., of Childrey and Letcombe, in the year 1526 founded a chantry in the "southern transept of the church, thence called St. "Catherine's aisle, in honour of the blessed Virgin "Mary, the Holy Trinity, and St. Catherine. He "likewise gave to the provost and scholars of Queens "College in Oxford a moiety of the manor of Letcombe Basset and divers other estates" (15 other parishes or hamlets are named as containing the divers other estates), "on condition of their keeping in repair "the said aisle, and likewise an almshouse which he "had founded in the village for three poor men of "the parishes of Childrey and Letcombe Basset. In "the ordinances of the founder it was directed that "the almsmen should pray for the souls of the following persons." (Here follow the names of 21 persons of the Fetyplace family, the provost and fellows of Queen's College, Oxford, and the rector of Childrey. Whether the almsmen still continue to fulfil this duty your Assistant Commissioner did not inquire.) "The chantry priest was to receive 8*l*. per "annum, *and was to keep a school for the children of "the parish*. The allowance to each of the poor men "was 9*d*. weekly, 3*s*. 4*d*. annually for a gown, and "2*s*. 8*d*. for fuel.

"After the dissolution of the chantries the salary "was continued to the chaplain as schoolmaster, and "is still paid at the present day (1824). The original "building remains and is tenanted by the almsmen "and schoolmaster." (This has been replaced by a rather ornamental building containing three almshouses and the schoolmaster's house. — G. C.) "The former (almsmen) receive 3*l*. 3*s*. per annum "each. (Now for about two years past they have received 7*s*. a week.—G.C.) "The salary appointed "by the founder to be paid to the chantry priest, "who was directed to officiate as schoolmaster, probably bore a fair proportion to the income of the "estates bestowed on Queen's College, and was certainly adequate to maintain him, as the statutes "direct that he should not be otherwise beneficed. "It seems indeed, by a prohibition against keeping "hounds and certain other uncanonical amusements, "that such a sum was sufficient for more than bare "support, although it is at the present time scarcely "an object to a village schoolmaster. Had it been "ordained that the stipend should increase even in a "remote proportion to the income arising from the "estates, the whole charity would not thus have "become nugatory. The property in Letcombe Basset alone comprises 500 and 600 acres. In 1818, "according to a return given to the Committee on "Education by the rector there was no other school "in the parish, and all the boys (sic) in the parish "were taught at it; the schoolmaster received 10*l*. "a year besides his house." (He now receives 50*l*., —G. C.)

At the time I visited the parish, January 13th, 1869, I found three school or rather school systems in existence, a Wesleyan mixed school supported by an endowment (as far as I could learn) of about 20*l*., a church school for girls supported by subscription, and the Fetyplace Endowed School, towards which the provost and fellows now pay 50*l*. a year and provide a house for the master. The Wesleyan school was for a time without a mistress, having had about 25 pupils before Christmas. The girls' school under the care of Dr. Whittingham had not again opened after Christmas holidays, but I was told had an average attendance of about 25 girls. The Fetyplace Endowed School had been closed for two months, and at the time of closing had only three boys, as the master informed me. The following notice was hung in the window of the Endowed School.—"On Mon- "day, the 18th, the Childrey endowed school will "be re-opened free for all boys *above five years of age "and able to read simple words of one syllable.* "Parents and others wishing to send children can "see the master between the hours of 9 and 10 "o'clock on Monday the 18th. The qualifications "will be strictly adhered to." The master of the Endowed School was good enough to undertake to get me a return of the children attending each of the schools, and I left with him a form for that purpose; I have however not yet (March 30th) received the return. I have no doubt that the master of the Endowed School had great difficulties to meet through the disinclination of the labouring class to submit to such a school discipline as he thought necessary, and such as children of a higher class are constantly placed under: but, however great those difficulties, and however they may have been increased by the want of discipline in the school at the time he took charge of it, I feel sure that, had this school been under Government inspection, I should not have found one of the best endowed parishes for educational purposes yielding about the least educational fruit of any parish in Wantage Union.—G. C.

10*d*. *Thomas Lawrence*, aged 82, an almsman, up to two years ago a farm labourer:

"I worked for Mr. Godfrey for 45 years, sometime carter, sometimes anything. The labourers here are not so well off now as they used to be, and several men are out of work. The women go 'cheening' (working with steam threshing machine) now, instead of their husbands working with the flail. On one farm in this parish, where they employed 10 or 12 men in winter, in time gone by, they only employ six now. Farmers' men are older than they used to be, because the younger ones has to shift about. There was a school here when I was young, and I should think I went till I was 12; now the parents is so badly off they can't keep them there so long.

"The women don't work so much as they used to, they don't employ them, or they would go; my master employed as many as the whole parish does now, and so the farms ain't kept so clean now. The young men here that are out of work won't go elsewhere to look for it."

Cottages.

10*e*. [The Assistant Commissioner visited some very poor and badly placed cottages in the lower part of Childrey; they were one or two of them the property of the occupiers, the others belonged to small tenement holders. All of these cottages were placed against the bank on each side of a narrow hollow, and had no back doors.

10*f*. About 20 young men out of work in Childrey. —G. C.]

Berkshire.

Mr. Culley.

B.

J.

11. Chilton - Pop., 315 - Acr., 1,500.
Cultivation is mixed.

Rev. E. M. Chaplin says,—
In one cottage, at this time, in *one* bedroom sleep,

1. An old woman between 80 and 90, who is unable to leave her bed.
2. A man of about 50.
3. His wife.
4. A son of 20.
5. Ditto 18.
6. Ditto 17.
7. A daughter 16.
8. Ditto 9.

} ! ! !

12. Compton - Pop., 590 - Acr., 3,795.
Cultivation chiefly arable.

Rev. J. S. Wasey says, "As regards many of the "cottages the ventilation and drainage is exceedingly "bad; water plentiful; garden ground short; rents "generally 1*s.* to 1*s.* 6*d.* It would be well if land-"lords would look upon cottages for human beings as "being as necessary, and even more so, than stables "and comfortable shelter for cattle and other animals. "Human beings, with souls, should be cared for cer-"tainly equally, if not before, horses, herds, and "swine."

12*a*. *Mr. Brown*, a large occupier, thus estimates the earnings of a carter, hired by the year:—

	£	*s.*	*d.*
Upstanding weekly wage at 11*s.*	28	12	0
Michaelmas wage - - -	1	10	0
House and garden free at 1*s.* a week - - - - -	2	12	0
Allowance for journeys - -	2	12	0
One ton of coals and cartage -	1	5	0
Extra earnings at harvest (one week's reaping after doing his horses) - - - - -	1	6	0
Beer allowance - - - -	1	6	0
	£39	3	0

An average of about 15*s.* a week.

12*b*. *Mr. Brown* says, "I think the earnings of day "men are about the same as carters."

13. Fawley - Pop., 243 - Acr., 2,870.
Cultivation is chiefly arable.

Rev. C. C. Luxmoore, says of the cottages, "That "they four rooms and are well drained, being on the "top of a hill; they are supplied with water from "the village well. They have good gardens and "outhouses; they belong to the landowner, and the "average rent is 2*l.* 10*s.*"

13*a*. *Mr. Stephen Brown*, occupier, says, "The cot-"tages generally are good, and I consider sufficient for "the labour of the parish, but unfortunately they are "all held by the squire of the parish, therefore the "tenant has not the means of selecting the best "labourers.

"They have all a good garden to each cottage.

"My carters earn about 16*s.* a week for the year. "Under carters have from 9*s.* to 10., and carter-boys "from 4*s.* 6*d.* to 5*s.* 6*d.* a week.

"About one-third of my adult labourers are "carters."

Mr. Brown has 27 horses on a farm of 940 acres, about 100 of which are in sainfoin, and the clover-seed is allowed to lie two years.

14. Farnborough - Pop., 232 - Acr., 1,845.
Cultivation mixed.

Rev. Edmund Price says, "In six cottages only "are there but one bedroom, the rest have two and "some three bedrooms. Water supply bad. Gardens "all good; outhouses sufficient. They belong to the "landowner. Rents vary from 50*s.* to 60*s.* per "annum."

14*a*. *Mr. T. G. Wells*, occupier, "I think two hill "men are equal to three vale men. They get more "regular employment throughout the year and are "better servants. It is very difficult to keep carters "from spending their allowance of 1*s.* in beer when "they are out with a waggon, and they often add "something to it; there is a public house (the "Blue "Boar") in Wantage where they give an annual "dinner gratis to the carters who frequent it." (The Assistant Commissioner was not able to ascertain the certainty of this custom, but he frequently saw a couple of waggoners standing at the door of the "Blue Boar," the carters being inside and the team-boys out-side looking after the horses.)

14*b*. *Mrs. John Brind*, "I would rather go out to "work in the fields myself than allow my girls to go; "they learn no good. I went out to work to help to sup-"port them, and other women do the same; it is not "much that we earn, but we can't do without it. I "think parents with large families could not do with-"out the earnings of their children till they are 10; "my boys have been out at 7 years old to keep pigs "and do errands, and I was glad to get their earnings. "Some girls go out at 7 or 8, the same as boys. I "would like to have kept my children longer at school, "but they can all read and write. We have no beer-"house in the village."

15. Hampstead Norris - Pop., 1,358 - Acr., 5,769.

Mr. Luke Lowsley, owner and occupier, says, "The "condition of the cottages is very good; they are "sufficient for the supply of labour required, and "several labourers walk two or three miles to work "in other parishes where there is not sufficient "supply. They are conveniently situated with respect "to the farms, and the occupiers are mostly the "owners, and have generally built their cottages. "They are not overcrowded. They are well supplied "with water. They have mostly good gardens, and "there are allotments which 30 years since were only "let to those with large families, but there are now "sufficient for all, and some have two or three. Too "much garden often proves an ultimate loss."

For the Hamlet of Hermitage.

15*a*. *Rev. P. A. Longmore*, says, "The cottages are "of all descriptions, from the newly built of red brick "to the old hut of rubble. They are owned by land-"owners. Rent of cottage with a few poles of "garden ground, usually about 4*l.* a year."

15*b*. Mr. Luke Lowsley thus estimates farm servants' wages,—

"Shepherds,	£	*s.*	*d.*
Weekly wage, 11*s.* or 12*s.*, say 11*s.* -	28	12	0
Michaelmas money - - -	3	0	0
Rent of free cottage - - -	2	12	0
Firing - - - -	1	5	0
Keep of dog and tax - -	2	10	0
Food for five weeks in lambing time	1	15	0
	£39	14	0

Something over 15*s.* 3*d.* a week, besides other perqui-sites, such as 1*s.* for each extra lamb and extra pay for extra work in harvest; but almost every farm varies in some of these particulars, and in many farms the weekly wage is 12*s.* for shepherds, making the average wage, besides some perquisites, 16*s.* 3*d.* a week.

"Carters have generally 1*s.* more than ordinary labourers, a house rent free, firing, double money in harvest, 1*s.* for each journey from home, from 3*l.* to 5*l.* Michaelmas wages, and often food when drilling &c. The system of wholly victualling them in harvest is now abolished in this county, but everyone gives them more or less food and about one gallon of beer per man per day; there are also so many perquisites given that it is impossible to calculate the amount in money. All our carters and shepherds are hired by the year, from old Michaelmas day (Oct. 11th), and at the time of hiring 1*s.* is given to bind the bargain.

"Under carters have about 7*s.* a week and 4*l.* at Michaelmas. Strong boys from 4*s.* to 5*s.* and 50*s.* at

Michaelmas. Boys of 12 or 13 have 3*s.* 6*d.* a day and 30*s.* at Michaelmas. These prices vary according to locality and price of bread, but this is general.

"The hired servants are lodged and have generally fresh beer and vegetables; my own have beer three times a day and a bottle to take with them to the field in summer, they have also vegetables three times a week. The earnings of an ordinary labourer entirely depends on his wife and family at piece work in the summer, but I believe a safe average is taking, from June to September inclusive, 1*l.* per week, and at other times, at certain kinds of piece-work, quite as much, although nominal wages may be 11*s.* As regards women we in this parish pay 8*d.* per day, but nearer towns they pay 1*s.* per day for nine working hours in summer, eight in winter."

16. Hanney - Pop., 947 - Acr., 1,990.
Cultivation chiefly arable.

Rev. Jas. Macdougall says, "The cottages in my "parish are like other cottages in poor parishes, some "tolerably comfortable, some very poor. The water "supply is good, and to the greater part of them "gardens are attached. Several are attached to the "larger farms, but a great many belong to small "proprietors."

16*a. Mr. H. Betteridge*, occupier, says, "We have "sufficient cottage room for the population and the "labour required for the parish. Ventilation and "water, no lack of. They have generally gardens."

16*b.* [Some very poor cottages in East and West Hanney; the worst I visited belonged to the occupier. There are some other very poor ones with one bedroom and no garden let at 1*s.* a week. The drainage is bad in both villages, and several ashpits and dungheaps are almost over the shallow wells. —G. C.]

16*c. Mr. W. Athawes*, occupier, says, "The condi- "tion of the cottages generally can't be fairly said to "be good, though they are here quite sufficient for the "labour required. The village is conveniently situ- "ated *nearly* in the middle of the parish. Some "cottages are overcrowded, with the usual results. "There is a never-failing supply of the purest water "at a depth of from four to 10 feet. Ventilation fair, "if appreciated. Nearly all cottages have good "gardens, the soil of which is very fine and rich; "some few have little gardens attached. There is "an allotment of good working land at about a "quarter of a mile distant from the village, let to "the poor by a near resident country gentleman at a "high rent. The matter wants revision: some, "having no need, farm these allotments; others, real "paupers, can't get a rood."

16*d. Mr. H. Betteridge* gives the following statement of wages:—

Cattle-men,	12*s.* a week and	4*l.* at	Michaelmas.
Carters,	12*s.* „	3*l.* „	
Carter-boys	4*s.* „	30*s.* „	

17. East Hendred - Pop., 889 - Acr., 3,400.
Cultivation is chiefly arable.

The Rev. A. Pott:—"Cottages vary a good deal, "some are good and some *very bad*. Water is "abundant and good. Privies are sometimes very "badly placed. I should think half the cottages "belonged to resident landowners, the rest to all sorts "of small proprietors."

17*a. Rev. T. Luck*, says, "The cottages on the "whole are bad; many very old and out of repair, many "with very insufficient accommodation, and with the "exception of three some way out of the village "there have been no new ones built as far as I know "with the last ten or twelve years, though there is a "demand for them."

17*b. C. J. Eyston, Esq.*, J. P., says, "Many of the "cottages are very bad. If all the labour were confined "to the parish I think the supply of cottages would "be sufficient. They are tolerably well situated with "respect to the farms; they are overcrowded; they "are fairly supplied with water but are not well "ventilated. Some of the cottages have little or no "garden, but the greater number have small gardens. "Some allotments of land have recently been placed "at the disposal of the cottagers."

17*c.* The following evidence was given by Police Constable George Holliday, who has been five years at East Hendred:—

"There are 35 cottages with one bedroom in East "Hendred, of these eight belong to one landowner "and one to another, four belong to a farmer, 10 "belong to a miller, eight belong to small holders, "one belongs to the occupier, and of three I do not "know the proprietorship. In one of these cottages "there are 10 occupants, in three of them there are "nine, in three there are eight, in two there are "seven, in four there are six, in four there are five, "in the others four or a less number. For one no "rent is paid, for one 26*s.* a year, for 22 of them 52*s.* "a year, for three of them 3*l.*, for seven of them 4*l.*, "and for one 5*l.*

"15 of them have no garden, one has two poles, "five have four poles, four have six poles, one has "eight poles, and two have 12 poles. Their con- "dition is as follows: 12 are good, three are middling, "and 20 are very bad. There have been about 26 "young men out of work lately, but they haven't the "heart to go away from home to look for work."

[Of the cottages described by the police constable as *very bad* nine belong to a landowner, three to a farmer, two to a miller, five to small holders, and two to unknown proprietors. The chief landowner only possesses one of these one-roomed cottages, and his cottages, of which there are about 40, are generally in good condition, a great contrast to those of the owner of nine of those described by the police constable at the request of the Assistant Commissioner. In one of a block of five miserable cottages with one bedroom lives David Bosher with his wife and eight children, eldest son 22, eldest girl 20, next lad 17, youngest child four. Not one of this family can either read or write. In the next house to Bosher there are nine persons who sleep in one bedroom; these five houses are falling to pieces, and are unfit for persons to live in. I saw more signs of poverty in this village than in any one which I visited in Wantage Union, except perhaps in East Challow.—G. C.]

18. West Hendred - Pop., 351 - Acr., 1,974.
Cultivation chiefly arable.

Mr. John Kingham Reeves says, "The cottages "may be put under three heads:—

"Good. These are well built, with two rooms on the ground floor and two or three bedrooms; with plenty of good water, ventilation, and gardens.

"Fair. These have one or two rooms on the ground floor, two up-stairs rooms, plenty of water, moderate ventilation, and garden.

"Bad. These have two rooms only, one up and one down, or both on the ground floor; no garden; badly built and in bad repair; generally sufficient, mostly convenient; about half-a-dozen over- crowded.

"The greater number of cottagers have gardens, and the vicar rents two acres of land and lets it to the people in allotments of 10 pole each at 3*s.* 5*d.* per year.

"I occupy about 1,200 acres of land situated in three parishes, my labourers being employed indis- criminately on each farm, so that I find it impossible to give a separate return of labour for the farm in this parish."

Mr. Reeves' farm is six miles in length, stretching from the deep land of the vale to the ridge of the chalk down; the upper land is in four-course husbandry and the lower in three-course, and the following statement given to the Assistant Commissioner by Mr. Reeves will show the variation in the cost of

Berkshire.
Mr. Culley.
B.
j.

labour on this farm in the same course of husbandry since 1855:—

		£	s. d.	
In 1855 the cost of labour was		1,468,	about 24 6	per acre.
„ 1860	„ „	1,546,	„ 26 0	„
„ 1865	„ „	1,539,	„ 25 6	„
„ 1866	„ „	1,600,	„ 27 6	„
„ 1867	„ „	1,819,	„ 30 0	„
„ 1868	„ „	1,849,	„ 31 0	„

In 1866 labourers' wages were 10*s.* a week; in 1868 they were 11*s.*

18*a.* Three lads spreading dung on the Down, ages 14, 16, and 16. Two of them can read and write, and were each of them five years at school. The third, William White, can neither read nor write, and has been at work since he was seven; is a well grown lad of 16, and has 6*s.* a week and 4*l.* at Michaelmas.

18*b.* *Jas. Chadwell*, carter (with him a team-boy, Thos. Rickson, 10 years old, and has been at work for two years; was at school, but cannot read or write now). "Boys are sent to work too young to get through the "dirty ground with a belly not half full of victuals. "They should not be sent to this job before they are "13; they would soon be as good carter boys, and "would be far better men at 20. I think the parents "of large families should be allowed a little rather "than let the children go to work so young."

[The boy Rickson cannot attend night school, as he lives at a "lone house."—G. C.]

18*c.* [I visited three very poor cottages in West Hendred. One of them, in which live Wm. Shepherd, a carter, his wife, and nine children, all sleeping in the one bedroom or loft, the eldest children being 20 and 17, is about the dirtiest and worst specimen of a cottage I ever saw, and the nearly naked children are as dirty as their home. Two of the other cottages I visited are, as far as their structure goes, as bad as Mrs. Shepherd's, but the holes in walls, floors, and roofs were patched over, and everything was clean and tidy, though one good lady apologized for being found all of a "caddle." I visited several other cottages in West Hendred, some poor ones and others fairly good. —G. C.]

19. East Ilsley - Pop., 746 - Acr., 2,845.
Cultivation chiefly arable.

Rev. E. H. Hansell says, "The cottage accom- "modation might be better than it is. Water supply "from wells is fair. Rents vary from 1*s.* 6*d.* to 2*s.* "and 2*s.* 6*d.*"

20. West Ilsley - Pop., 432 - Acr., 3,200.
Cultivation is mixed.

Rev. Wm. Chambers says, "The cottage accommo- "dation has been bad, but it has been considerably "improved within the last few years, and will soon, "I hope, be fairly satisfactory. As a rule cottages "in the hands of a large landowner or any gentleman "are in better condition than those which belong to "the poor themselves, or those just above the poor."

21. Letcombe Basset - Pop., 283 - Acr., 1,562.
Cultivation chiefly arable.

Rev. C. F. Willis, says, "The worst cottages are "built of wattle and plaster or chalk rubble and "thatched with straw. The best are of brick with "slated roofs. Water abundant, there being a well "of pure water to every four or five cottages. To "most there is a small plot of garden ground attached; "there are also four acres let to the poor in allot- "ments at a mere nominal rent. Total number of "cottages 31. 22 owned by a resident farmer, four "by Queen's College, Oxford, (proprietors of about "550 acres, they have two more cottages being "built,) 20 by small tradesmen residing in the next "village, three by non-resident landlords, and two by "the rector. Average rent 1*s.* a week."

"21*a.* Five women working with thrashing machine at Letcombe Basset, three unmarried and two married, all women of from 20 to 30 years of age. One forking in the rick, two untying bands, and two shaking out the straw from the machine. These women come at 7 and work with the men till 5 or 6, according to the light, and receive 1*s.* a day.

21*b.* Three young men have been out of work for six weeks.

22. Letcombe Regis - Pop., 431 - Acr., 3,720.
Cultivation chiefly arable.

Rev. T. Lanfear, says, "There are several cottages "having but two rooms, a room on the ground floor "and the room over it. Ground floor room 13 feet by "11 feet, bedroom, 19 feet by 11 feet; bedroom in some "cases divided into two parts by a partition of wood or "curtain. Some cottages have two rooms on ground "floor 11 feet by 9 and 9 feet by 7, bedrooms same "size. No drains; ventilation very bad; slops thrown "out at the back door. One privy to five cottages, "inhabited by 14 persons, male and female. Water "supplied by a small stream running through the "village coming from a spring. This water is used "for all purposes, although wherever there is any "drainage it is carried off by this stream. Each cot- "tage has a small garden. Some of the cottages are "owned by landowners, some by tradesmen and "others. None are required by their landlords to "deal at any particular shop. Landowners and "farmers charge 1*s.* a week rent, and others charge "1*s.* 3*d.*"

22*a.* *Mr. W. Palmer*, occupier and vice-chairman of guardians, says, "There are no very bad cottages here, "though a good many want improvement. They are "fairly supplied with water. Most have gardens, "but not large enough. I think the garden should be "nearly a quarter of an acre, and I think that land- "owners would get a certain amount of return for "money invested in cottage building by attaching "more land; land worth 1*l.* an acre on a farm would "be as a garden worth 3*l.*, it becomes accommodation "land."

23. East Lockinge - Pop., 318 - Acr., 2,822.
Cultivation is chiefly arable.

Rev. B. Tyrwhitt says, "New model cottages built "by Col. Lloyd Lindsay here and at Ardington are "visited by Berkshire squires and are considered by "them to be first-rate. They have perceptibly raised "the inhabitants in the social scale by making them "more cleanly and decent and respectable. These "cottages are large, well ventilated, and drained. "Besides these cottages the old cottages are being "repaired and improved by Col. Lindsay, chief land- "owner. There are also three or four smaller cottages "built by the Rev. J. F. Collins, landowner, with "two or more bedrooms. The new cottages have "an ample water supply from wells in the cottage "gardens. Besides small gardens there are allot- "ment grounds for potatoes, &c. All out-houses new "and very good. Rent 1*s.* 6*d.* a week."

23*a.* *Rev. J. F. Collins*, J.P., chairman of board "of guardians, says, "The condition of the cottages "in this parish is good; there are barely sufficient "for the supply of the labour required; not "overcrowded; well supplied with water, and ven- "tilated. Very few of the cottages have gardens "attached to them. A convenient piece of land was "allotted to the poor at the Enclosure in lieu of their "right of cutting furze on the downs. This is about "sufficient to allow 12 poles of ground to each house- "holder."

23*b.* *Mr. Hardy*, bailiff to Col. Lloyd Lindsay. Has been six years in Berkshire, five as under bailiff and one as bailiff; came to Berkshire from Mid-Lothian.

"Our men will average 15*s.* a week or more, taking the year through. I have two men now chaff-cutting, who, with the help of a girl each, are earning 21*s.* a week, and one man with a hand box is earning 17*s.* a week. The worst fault our men have is beer-drinking; they are very inferior to Scotch labourers, such as those in the Lothian for instance; two men there do as much as three here and require less looking after. We use very few boys, as we plough mostly with reins and

a pair of horses, and I have sent for tackle to use three abreast with reins when we want more than two, as we do sometimes. It's all nonsense about three horses abreast doing more harm than three or four in a line on wet land; the surface you turn over is less trodden with three or four in a line, but they make a fine water bed in each furrow that is forgotten because it is out of sight. Some of our land is as stiff as any in the neighbourhood. We have two Clidesdale mares; they will plough as heavy land as any three of the ordinary Berkshire horses and do it quicker. We give a gallon of beer a day per man in harvest.

23*c*. Men are out of work at Hendred because they won't leave their village, they'll rather starve or beg; they are not worth hiring, I would rather do without them. We give as much piece-work as we can to let men earn a fair wage and make them work for it. Men cannot be trusted to do day-work here as they can in Scotland."

23*d*. *Mr. Dalby*, clerk of works, Lockinge,—"The "barrack system for hired boys is a very bad feature "in this neighbourhood; there is no one to look after "them and they go off at night to the public-house. "The public-house here is shut up at 10 o'clock by "Col. Lindsay's desire, and the effect on the young "men has been very good."

23*e*. Allotment award for East Lockinge, dated June 1st, 1853.

By the award inclosing the parish of East Lockinge the Commission did award in lieu of and satisfaction for the right of cutting furze and bushes upon part of the down lands inclosed to the rector and churchwardens of the parish of East Lockinge and the Rev. J. F. Collins, of Betterton, as trustees, a plot of ground containing three acres, one rood, and 24 perches, to hold to them upon trust to let the said piece of land in 43 equal lots to the then present inhabitant householders of East Lockinge, being labourers, upon such terms and conditions as the trustees should appoint, and when any lot should become vacant to let the same to labourers living in the same parish, and after payment of rates and expenses of management to divide the rents in the month of December, yearly, equally between every settled inhabitant householder of East Lockinge who should apply for same in manner to be directed by said trustees.

23*f*. The following table showing the wages and allowances of hired men and boys on Col. Lloyd Lindsay's farm was kindly supplied to the Assistant Commissioner by Mr. Morland.

Name of Labourer.	Occupation.	Wages per Week.	Michaelmas Wages.	Cottage Rent.	—
		s.	£ *s.* *d.*		
Alfred Welsh - -	Head shepherd -	14	5 0 0	Rent free - -	Shearing 3*s.* 6*d.* per score. Six weeks in lambing time at 1*l.* per week.
John Greenough -	Under shepherd	13	5 0 0	„ „	
William Miles -	Shepherd boy -	5	2 0 0	Lives with his father.	
James Ballard -	Head carter -	14	6 0 0	Pays 3*l.* 5*s.* a year rent.	1*s.* extra for five weeks, both in harvest and haymaking, and one gallon of beer allowed per day when at cart; if on a long journey allowed 1*s.*, if a short journey 6*d.*
James Miles - -	Carter - -	14	4 0 0	Rent free - -	„ „
John Dawson -	„ - -	13	5 0 0	Pays 3*l.* 18*s.* a year for rent.	Half a gallon of beer when at cart and the same journey money as the head carter.
Stephen Hicks -	„ - -	13	4 0 0	Rent free - -	One gallon „ „
John Robey - -	„ - -	13	—	Sleeps on the farm	Half a gallon „ „
George Alder -	„ - -	11	4 0 0	„ „	Allowed journey money the same as the head carter.
Enoch Walker -	„ - -	11	4 0 0	„ „	„ „
William Woodley -	„ - -	10	4 0 0	Lives with his father.	„ „
Ernest Barnet -	„ - -	10	4 0 0	Sleeps on the farm	„ „
Henry Miles - -	„ - -	8	3 0 0	„ „	„ „
Charles Stratton -	Attends bailiff's horses.	6	3 0 0	„ „	
Jacob Wilkins -	Fogger - -	13	5 0 0	Rent free.	
John Woodley, junr.	Fogger boy -	5	2 10 0	Lives with his father, rent free.	
John Wilkins - -	Fogger - -	11	2 0 0	Lives with his son, rent free.	

The other 16 men are not hired, but with a few exceptions are paid 13*s.* per week.
About 14 women are employed and are paid 6*s.* per week.

[Allowing 3*l.* as value of rent-free cottage these earnings are about as follows for the year :—
Head shepherd, over 18*s.* a week.
Under „ „ 16*s.* „
Head carter „ 18*s.* „
Married carters, from 18*s.* to 17*s.* a week.
Unmarried „ „ 14*s.* 6*d.* to 12*s.* „
Foggers - „ 16*s.* to 12*s.* „
The day-men at an upstanding wage of 13*s.* cannot earn less than an average of 15*s.*—G.C.].

24. Peasemore - Pop., 332 - Acr., 2,055.

Rev. Thomas A. Houblon says, "Almost all the cottages have kitchen and *pantry* down stairs and two bedrooms upstairs, and are well ventilated; the

Berkshire.

Mr. Culley.

B.
j.

drainage is tolerably good; very good water supply; garden and wood houses. For the most part they belong to the landowner, and are at moderate rents."

25. Upton - Pop., 306 - Acr., 1,378.
Cultivation mixed.

Letter from Rev. Richard Hooper to G. Culley, Esq., Assistant Commissioner.

My dear Sir, March 17, 1869.

I must apologize for not replying to your note and circular, but Lent and Confirmation preparation, and the many applications of all sorts, have made me dilatory in my correspondence. I will say, then, that this parish is essentially agricultural. (2.) That I think the boys are sent to work far too young, as the low rate of wages makes it imperative on parents to get them from school as soon as possible. That this tells upon their physical strength I infer from their dwarfish stature, as I have many boys from 16 to 18 apparently not more than 12 or 14. The girls go out to service when about 13 or 14; and those who remain for field service invariably fall from virtue. This I attribute to *hereditary example*. Mark this, if you please; all the teaching, all the preaching, you can give seems to have *no* effect on this point. I don't mean *whoredom* but fornication before marriage. The cottage accommodation in this parish was and *is* simply abominable; but my chief farmer (Mr. N. Humfrey), who is a considerable landowner, is building *every year* some admirable cottages. Will this correct the above sin? It may go far to do so, but as long as children can point to their parents I am afraid we shall have uphill work.

Till I came here there was *no* school; the children had the privilege of going to the endowed school at Blewbury, but they never availed themselves of the privilege, as there was always a jealousy on the part of the trustees of the Blewbury school. I built a capital school by my own exertions, and mainly support it out of my own pocket. The average attendance is about 35. I have no Government assistance, and *do not want* it. Being a liberal in politics, I do not refuse admission to the children of dissenters, although I have only *one* dissenting family in the village. When Mr. Gladstone disestablishes the Church, my school shall be a private school, and not in his power.

I have a night school from November 1st to March 1st at the vicarage, for farm lads; and it is very successful.

What we want is,—

1. An inspector of nuisances for our villages.

2. Better cottage accommodation; which we are getting in this village.

3. An elevation of the tone of morality; which *I hope* education and example may promote, for there had never been a resident clergyman till I came.

4. I think no boy ought to go to farm work till he is 14. Here they begin at 10.

5. Higher wages; for my farmers confess they grow 10 times as much corn as their grandfathers did. A confession that made me suggest that my tithe ought to be 10 times as much as at commutation; but *they could not see that.*

6. I find field work for women very demoralizing, and the pay insignificant, 8*d.* a day.

I must do *my* farmers the justice to say that we have *no pauperism*, as they employ every one *all the year round.*

An inspector of cottages and dwellings of agricultural labourers would probably be one of the most efficacious means of remedying much of the social evils now prevalent. Compulsory powers of repairing, draining, &c. ought to be given. Many of our Berkshire villages contain cottages utterly unfit for human dwellings.

Yours very truly,
Richard Hooper.

26. Sparsholt - Pop., 493 - Acr., 3,693.
Cultivation mixed.

Rev. H. A. Dodd says, "Many of the cottages are "old, but are at this time being repaired by the "landlord. In some the ventilation is insufficient "and the drainage unsatisfactory. The water supply is adequate to the wants of the village. The "people spend their money where they please, and "the rents are low."

26*a.* The Assistant Commissioner visited some very poor thatched cottages, some of them with one bedroom; 12 or 14 of them, all in bad condition, belong to a non-resident landowner. In one of these lives,

26*b. Samuel Basson*, who says, "I pay 45*s.* a year for the cottage and a bit of garden, and I have an allotment of one chain (16 poles), for which I pay 8*s.* (at the rate of 4*l.* an acre). Squire Atkins lets his allotment land at about half the price and has been doing up some of his cottages. I have two boys at work; one of 15 years gets 4*s.* 6*d.* a week, and 30*s.* at Michaelmas; and the other of 8 gets 2*s.* 6*d.* a week and 10*s.* (this was the youngest boy hired for the year that the Assistant Commissioner discovered the age of). We have six children, two little ones at school; one girl 17, out at service. My wife works out when she can, but she has been ill lately. Both my boys went out to work at 7, when there's many to keep they must go; they can neither of them write, but they can read a little. I am a fogger, and get 11*s.* a week and nothing at Michaelmas; I get no regular work at harvest; I have worked for Mr. Frogley for 20 years."

27. Wantage (including hamlets) - Pop., 3,925. Acr., 8,000.
Cultivation chiefly arable.

Rev. W. J. Butler says, "The cottages in Wantage "are generally owned by small proprietors, who are "utterly reckless of the health and morals of their "tenants. Wretched hovels destroy decency, self-"respect, and love of home. Nothing is more necessary than that some measures should be taken to "prevent small capitalists from running up utterly "unfit dwellings and reaping a large per-centage at "the expense of health, life, and morality. I could "mention frightful results of the present system of "dwelling houses. The commissioners of the town "are becoming more strict as to sanitary arrangements; still much is wanted. The drainage is "unsatisfactory. Water supply is generally good. "Rents vary from 1*s.* 3*d.* to 2*s.* 6*d.* a week. I have "built six cottages at a cost of 710*l.*, including the "land they stand on. The tenants pay 2*s.* 3*d.* weekly, "and thus yield a per-centage of nearly 5*l.* per annum "on the cost. I believe this can be done in most "neighbourhoods. My cottages are large enough for "comfort, have three bedrooms, a boarded parlour, "and a small bricked kitchen. Each has a small "piece of garden ground."

27*a. W. D. Washrough, Esq.*, owner and occupier, says, "The cottages in Wantage are mostly good. "There are, however, many bad ones in out of way "places occupied by the lowest class. They are much "overcrowded, and immorality is the natural result. "They are all well supplied with water, but ventilation "is generally objected to. Of course in the town there "are only a few gardens, but in the outskirts there is "a large plot of land (in Charlton) occupied by many "of the Wantage labourers. In the neighbourhood "there are mostly gardens, though small, to the cottages, and also allotments near their homes, but "rather dearly let."

27*b.* [Assistant Commissioner's Note.—Wantage: Visited six new cottages built of brick by the vicar (Rev. W. J. Butler) on the site of 10 old cottages, which he bought and pulled down. These cottages have a living room about 10 × 10 on the ground floor, with a back room for washing, &c.; on the first floor a bedroom about 10 × 10 and another about 7 × 10, and above a very good attic room about 10 × 12. The cost was,

for old cottages and ground, 230*l.*; for cost of new cottages, using old materials, 480*l.*; total cost, 710*l.* for six cottages, let at about 2*s.* 3*d.* a week each, a return of 3½*l.* 2*s.* for an outlay of 710*l.* These cottages were built from Mr. Butler's own designs, and give a return of nearly 5 per cent. This does not include a wooden porch. The offices are not very good, *i. e.* too near the cottages, and not sufficient, there being only two privies for the six. Each cottage has about 5 poles of garden in front of it—a great improvement on the 10 old cottages, all standing on the ground now occupied by six.]

27*c*. *Mrs. Hughes:* Husband a labourer; occupies a very poor thatched cottage with one bedroom, rent 1*s.* 7*d.* a week. Father and mother and six children at home. Eldest girl, 16, at home. Mother and eldest girl work in the fields, the girl on a farm three miles off. She leaves home at 7 a.m. and gets home about 6 p.m., and then goes two nights in the week to a night school. Next girl "minds the baby," and five other children go to school. Eldest boy works on a farm about four miles off, and comes home on Saturday night. He is 14, and is a carter's boy, and gets 3*s.* 6*d.* a week. It takes it all to keep him. "I give him a "quartern loaf and money to buy two others, ½ lb. of "lard, ½ lb. of bacon, ¾ lb. of cheese, and some coffee "and sugar to take with him every week. My girl "gets 9*d.* a day and 1*s.* at haymaking. She has "worked out since she was 15."

27*d*. *Mrs. Ranklin* (age 65, husband a farm labourer): "I have worked out since I was a girl, at first with "my father. People never work now like what girls "worked when I was young. My husband couldn't "do harvest work this year, so I went with another "woman. I have been spreading dung all day to-day. "We work from 8 to 5 now, and have an hour for "dinner. We get 8*d.* a day now, 10*d.* a day and beer "in hay time, when we work from 7 to 6, with one "hour's rest. Working out in the fields is good for "women, does young women good. A girl going out "with married women may hear a good many things "she shouldn't; it greatly depends on whom they "work with. A great many young women work out. "I have only one daughter, and she wouldn't work "out in the fields. I wouldn't like to send a girl out "till she's 12 or 13. I don't think the eight hours' "work would hurt her. It would be a good thing if "women hadn't to work in winter. It would be a "great deal better for women with families to stay at "home; they lose as much as they get by not looking "after their families.

"Boys don't go so early to work now as they did. "Half-day wouldn't do for farm boys. The little "boys are very 'deedy' boys, more deedy nor the "bigger boys. It would not hurt the families if boys "were not allowed to work before 10. They earn "very little pay below that. Me and Mrs. Watson "could cut half an acre a day at 10*s.* an acre. We "have earned 5*s.* each a day."

27*e*. *Maria Elborough* and her sister, single women about 40: "We used to be able to earn 5*s.* a week "each of us slopping, working nearly 12 hours. We "don't look after the hours at that work. Field work "we can do more at. We go haymaking. I don't "think girls are done good to by working out; it "makes them too bold. We get 1*s.* a day and beer, "three pints, in haymaking time."

27*f*. I saw (December 18) seven teams at work on the down land. Six had three horses abreast behind and one in front, with a man and a boy. One team was a pair of horses with reins. No boy was under 10, but one of 10 said he had been at work before 10. Another team had a boy of 14 holding the plough and a boy of 13 driving. These boys both hired by the year; boy of 14 had 5*s.* 6*d.* a week and 50*s.* at Michaelmas; boy of 13 had 3*s.* 6*d.* a week and 30*s.* at Michaelmas. Both boys could read, but neither could write.

27*g*. The man with two horses (*John Chapman*) says, "I am a carter. I have charge of seven horses. "I am hired by the year, and get 11*s.* a week, upstanding wages, 3*l.* 10*s.* at Michaelmas, and a house and "a bit of land they reckon at 5*l.* I don't justly know "how much land there is. A day man gets about as "much in a year as a hired carter. It seems to suit some "men better, and there ain't much in it. Shepherds, "carters, and foggers are hired by the year from old "Michaelmas day (October 11). That boy you were "talking to is my son. He can read a little, but he "can't write. I was sent out to work almost before "I was breeched, but boys don't go out now before "they're 10; they're no use so young."

Supposing this man's cottage and ground is worth 5*l.*, his wage amounts to about 14*s.* 3*d.* a week. "Day "men get 10*s.* a week."

27*h*. The following evidence was given by a labourer in Wantage:—

"You see there's ten times the schooling now than there was when I was a boy; and when a boy knows a thing or two he looks about him and gets an errand boy's place or such like, or an older boy gets a groom's place up towards London, and a real able-bodied young man, if he hasn't a wife and can't help himself won't stay to get the wages they give here, and so the work is left to the old men and boys."

28. Charlton (hamlet of Wantage).

H. D. De Vitré, Esq., says, "The cottages are "certainly not good and require much looking after, "as in several cases they are overcrowded, and as a "rule the water supply is bad. As a rule the cot-"tagers have either gardens around their cottages or "allotments within a quarter of a mile of the village."

28*a*. *Mr. B. Castle*, occupier: "A large portion of "the cottages have gardens attached and about from "10 to 20 poles of land in allotments.

"Hired men have about 14*s.* a week for the year.

"Carter lads, 8*s.* 6*d.* to 9*s.* Boys as drivers, "4*s.* 6*d.* to 5*s.* 6*d.*

"Daymen, I should say, earn from 15*s.* to 17*s.*

"Married shepherds have from 16*s.* to 18*s.*

"Under shepherds (lads of from 16 to 18 years) "have from 8*s.* to 10*s.*"

28*b*. *Mrs. John White:* "Ordinary farm labourers "get 11*s.* a week at Lockinge, my husband works "there; we have no other means just now besides "this 11*s.* a week. We buy a bit of bacon that my "husband may have a bit to carry out with him. I "have one child at home. I work out whenever I "can get work. Very few unmarried women work "out here. We pay 1*s.* 4*d.* a week for our cottage. "We have two bedrooms; it is only one brick thick "four inches, and it rains in all about the roof. There "is only one privy for four cottages here, which is "very indecent. I worked out and was also in service "nine years before I was married. I think that some "girls who work out are bolder than girls in service, "they have more time on their own hands. I don't "think farm work itself injures them, but they earn "very little by it. I don't think parents with a large "family could keep all their children from work up "to 10 years of age; as soon as they can earn a penny "we're glad of it. When my husband is up at "3 o'clock for grass mowing and doesn't get home "till 8 he requires more than the little necessaries "he generally gets, and then the tools are to pay for. "There's very little left, and sometimes we are obliged "to pay off in summer *what we have been obliged to "owe in the winter*. In summer last year my husband "only earned about 2*l.* 10*s.*, I wasn't out. In ordinary "summers between us we have earned 1*l.* more. "Women are paid 8*d.* a day, but we seldom can "make out all the week. We begin about the end "of March and go on till the end of October, and we "may earn (this year there was no weeds growed "and nothing to do) 5*l.* This is as much as we women "can make good."

The best wife for a labourer is the woman who has worked out.

28*c*. *Mrs. Henry Champ* (husband farm labourer): "We have six children, eldest 13. Our cottage is very "bad, only one bedroom, and made of wattle and dab.

Berkshire.
Mr. Culley.
B. j.

" My boy of 13 gets 3*s.* 6*d.* a week and 1*l.* at Michael-
" mas. My boy of 9 is at school, he is too young to
" workbut he must be out soon."

28*d. William Champ*, " I can't read, I am 13. I am
" a ploughboy. I was at school a long while, but I
" never learnt to read."

28*e. Mrs. John Kent:* " My husband is a farm la-
" bourer, he has 10*s.* a week. We earned about 3*l.* in
" harvest besides the 10*s.* I can earn 4*s.* a week
" when I make a full week. I have six children ;
" my three boys went out to work at 9 years old."

28*f. George Godwin*, carter, says, " It is quite right
" that children should go to school, but with so little
" coming in how are the parents to keep them ? I
" have a boy of 11, he went to work before he was
" 9 and has grown well, but stiff land were cruel
" on him at first. Both these boys (two boys of
" 13 and a lad of 17 with them) and the lad go to
" night school. My boy went driving a plough when
" he began first, they mostly begins so, and there's a
" smartish few at it before they are 10. I heard of
" this business about educating the children more, but
" if the Parliament gentlemen wants our children to
" go to school they'll have to help all them as have
" young children."

29. Grove (hamlet of Wantage).

There are cottages by the brook side here with no wells and no drinking water, but from the brook which has just passed through Wantage and receives the sewage of Letcombe Regis and Wantage. I would have been very sorry to drink it to-day (January 6th in flood). In a block of two cottages live John Webb, farm labourer, and his family, four children (two boys 18 and 15), and his wife. In the other Daniel Webb kept by the parish. These cottages have each what have been two bedrooms, but only one is habitable. Webb's account of the cottages is " If it wasn't for
" the gardens these houses ain't worth 6*d.* a week ;
" they are all tumbling down about our ears and now
" they be raising our rent to 4*l.* a year. The brook
" was far dirtier yesterday."

FARINGDON UNION.

30. Ashbury - Pop., 742 - Acr., 5,520.
Cultivation mixed, in four and five course husbandry.

Mr. Heber Humphrey, occupier and guardian, says,
" Some cottages still in great need of improvement ;
" a fair supply for the requirements ; not so conveni-
" ently situated as could be wished, not overcrowded
" generally, though many have as yet only one or
" two bedrooms—*which should be made illegal*—a
" fair supply of water.

" All deficiencies of gardens made up by good
" allotments let out by the lord of the manor, and the
" same in the neighbourhood generally.

" I may add that we are fast growing away from
" the evils which this inquiry is intended to remedy.
" As a rule, those mothers who have themselves been
" in service when young are the best managers in a
" home (beyond comparison) ; and, what is of equal
" consequence to the family, they know and feel the
" value of education for their children, and see that
" they attend when the others do not, and this is the
" true cause of good or bad attendance at the schools.
" I am so convinced of the benefit of a few years
" domestic service to young women that I could not
" say a word against a restriction on their field work
" if I could be sure that it would not drive them in
" too many cases to anything worse. A general re-
" striction on older women's field work I do not think
" could be fairly maintained, for a woman when she
" has brought up her family and they are got away
" from home, even if she had been to service, might
" be much more comfortable helping her husband earn
" a little to put by for old age in the open air than in
" competing with the fast increasing number of those
" who prefer indoor employments.

" With what machinery has done in the last 10
" years I don't think we employers should be affected
" much by a general restriction, but this same ma-
" chinery provides a certain amount of very light
" work exactly suited to the parties mentioned
" above."

31. Bourton - Pop., 328 - Acr., 1,200.
Cultivation one-third arable, two-thirds pasture.

Henry Tucker, Esq., landowner and high sheriff, says, " There are few villages better provided with
" cottages than this, the old hovels having been re-
" placed within the last few years by substantial,
" comfortable, and convenient dwellings, well venti-
" lated and supplied with good water, and small
" gardens attached, which are supplemented by ample
" allotments close to the village. Rules are laid down
" to prevent overcrowding, and all let by the week.
" The writer obtained at his own cost in 1859 a
" return of all the cottages in the Faringdon Union,
" with the number of rooms in each, and number, ages,
" and sexes of their inmates in a tabulated form,
" which he still holds. He made a digest from these
" tables of some of the worst cases, which was pub-
" lished in the *Times* and produced a great impres-
" sion on the public mind. He failed in his endeavours
" to induce some member of Parliament to bring the
" matter before the House of Commons with the
" object of obtaining a similar return for all England,
" which he still believes to be the only proper course
" to adopt, and all that different Governments have
" since done in sending Dr. Hunter and others through
" the country to obtain information on this subject
" only serves to confirm that opinion, because all such
" desultory modes of seeking information must fail
" to give anything like a true idea of the deplorable
" condition of our agricultural labourer and artizan
" with respect to their dwellings. Since the estab-
" lishment of these schools a marked improvement is
" to be observed in the general intelligence of the
" labourer, which is seen in the desire of the boys to
" get more lucrative employment away from the
" village, and the girls greatly prefer domestic service
" to field work. Formerly the parish had to keep a
" number of young able-bodied men during winter,
" but of late years there has been scarcely an idle
" hand in the village either in winter or summer."

32. Buckland - Pop., 912 - Acr., 4,434.
Cultivation mixed.

The Assistant Commissioner visited several very comfortable cottages in this parish belonging to the chief landowner. Speaking of the farm labourers, Mr. Williams, land steward to Sir William Throckmorton, said, " The men here will only work from 7
" to 12 and 2 to 5 o'clock, and won't, except in
" harvest, make any effort at piece-work."

33. Coleshill - Pop., 464 - Acr., 2,660.
Cultivation mixed, larger proportion grass.

Mr. E. W. Moore, land-agent, says of the cottages,
" Dining room, 14 × 12 ;
" back rooms, 12 × 10.
" Bedrooms over.
} Ventilation and drainage excellent.

" Usually three bedrooms ; excellent supply of
" spring water ; gardens about a quarter acre. All
" belong to the Earl of Radnor. Varies according to
" accommodation from 1*s.* 2*d.* to 2*s.* per week."

The following evidence as to the condition of the agricultural labourers was given by Mr. Moore :—

" When I came here the men were a lawless, lazy set, and always badly off ; they had allotments of half an acre each, and tried to live off them.

" Lord Radnor soon after gave them allotments or gardens near home of 40 poles, and they are now about the best instead of being about the worst labourers in the county. All the cottages on Lord Radnor's estate are good [these on Coleshill are very good.—G. C.]. We have a difficulty in dealing with cottages held on quit rent by the occupiers. They prefer the wretched place. ' Good enough for we.'

" The reduction of the pauperism in Faringdon Union is only the result of a careful examination of cases ; the board are liberal when relief is necessary. The rule is not to give immediate relief to a man who

has been in regular work up to the time of application. We make him wait a few days or a week. Another rule is not to pay a member of the patient's family as a nurse, except under peculiar circumstances."

33*a*. *Mr. James Robertson*, farm bailiff, Coleshill:—"Men won't take the trouble to send their children "to school here even if they can; they send them "out half-naked to starve birds and starve themselves, "poor things. I always employ as many men here "in doing such things as spreading dung as we used "to employ women in Scotland, four to a plough "opening the drills, and the men think they are "going to be killed with hard work. We are obliged "to use three horses in a line here on sticky ground "when it is wet. I would not have believed it had I "not seen the land."

33*b*. Earnings of five day labourers in Coleshill House Farm from Michaelmas 1867 to Michaelmas 1868, as given by Mr. Moore.

	£	s.	d.		s.	d.	
1.	38	7	9,	or	14	9	per week.
2.	34	2	9,	or	13	1	„
3.	36	13	10,	or	14	1	„
4.	34	11	6,	or	13	4	„
5.	40	6	7,	or	15	6	„

Average, 14*s*. 2*d*. per week, nearly.

34. Little Coxwell - Pop., 302.
Cultivation chiefly arable.

Mr. John Dyke, occupier and guardian, says, "The "cottages are bad and insufficient, and many of them "overcrowded.

"Water supply pretty good.

"Ventilation often bad.

"The cottages generally have gardens or allot-"ments."

35. Eaton Hastings - Pop., 185 - Acr., 1,511.
Cultivation mixed on four-course system.

Mr. W. T. Kinch, owner and occupier:—"The "cottages are generally very good; they are sufficient "for the supply of labour and conveniently situated; "they are not overcrowded and are well supplied "with water. Nearly all have gardens."

36. Hinton Waldrish - Pop., 329 - Acr., 1,847.
Cultivation mixed.

Rev. Wm. Jephson:—"The cottages are better "than they used to be. In our parish some not fit for "habitation; the squire has promised to pull down "and build others in their place; but there are not "enough cottages, and some are very crowded. In "the neighbourhood there are some very disgraceful "habitations with no prospect of amendment, very "great moral evil has been the consequence; they "are supplied with water but not well ventilated. "The cottages have gardens and allotments."

37. Longworth - Pop., 1,131 - Acr., 2,024.
Cultivation about ⅓ pasture, arable land in four-field system.

Mr. Albert Edmonds, occupier and land-agent,—"The condition of the cottages is tolerably good with "a few exceptions. They are sufficient for the supply "of labour required, they are conveniently situated "with respect to the farms; they are overcrowded in "some cases; they are well supplied with water, they "are generally well supplied with gardens or allot-"ments."

38. Pusey - Pop., 134 - Acr., 1,070.

The Assistant Commissioner visited several very good and roomy stone cottages with three bedrooms each, belonging to the chief landowner; these cottages were built at a cost of about 250*l*. each.

Esau Ballard, hurdle-maker, shearer, and thatcher,—"I can make about 2*s*. 3*d*. in short days; in sum-"mer I have made my 3*s*. and 3*s*. 3*d*. a day. My "wife goes with me sometimes. We have eight "children, two girls, 14 and 15, are out at service, "three girls 13, 12, and 10, and a boy 8, are at school. "Boys should not go to work before they are 10. I "would not let any girl go out to field work if I could "get her out to service, they are not worth anything "for service after they have been at field work, not "one in twenty. I am getting money from my club "just now, as I am too ill to work."

39. Uffington - Pop., 644 - Acr., 3,147.
Cultivation mixed.

Mr. Jas. Lawrence, occupier and guardian, says, "The condition of the cottages are not good, but are "fast undergoing improvement. They are quite "sufficient for the supply of labour required, and are "conveniently situated with respect to the farms, "but in some cases where there are large families "they are rather overcrowded, and I have no doubt "it has a very bad effect on the morals of the chil-"dren. The supply of water is good, but the venti-"lation is not good. Most of the cottages have a "good garden and also an allotment."

40. Stanford-in-the-Vale - Pop., 1,075 - Acr., 3,829.

There is some land in this parish belonging to the poor of the parish of Shrivenham, and let by the trustees to the rector of the adjoining parish of Shellingford. Some part of this poor's land is let in allotments of 20 poles to the poor of Stanford at the rate of 4*l*. per acre. (There are several labourers in Stanford who have not got any allotment ground.)

Stanford is a scattered village, containing some good and some very bad cottages belonging to many different proprietors. Rents vary from 1*s*. to 1*s*. 6*d*. a week. One cottage, rented by Mrs. Puzey at 1*s*. a week, is a mere den—a ground floor room about eight feet by seven, with a so-called bedroom open to the thatch over it, with no back premises. Many of these cottages have been built on the waste, and have no back premises and no room in front for offices. In such a cottage, with one bedroom, live Charles May, with his wife and three children, eldest girl 17. The cottage inside was neatly kept, but the midden and offices close in front of the door were anything but pleasant. For this cottage May pays 1*s*. 2*d*. a week.

41. Woolstone - Pop., 256 - Acr., 1,674.
Cultivation mixed.

Mr. W. J. Butler, occupier and guardian, says, "The cottages here are better than many in the neigh-"bourhood. Some are unoccupied. They are well "situated for the farms. Though I know of no evil "results from overcrowding, it would be better if "some new ones on a three-roomed plan were built. "The supply of water and ventilation are good. "Every cottage has an allotment of garden ground "conveniently situated, and most have a small piece "of garden in front. The allotment is 25 poles."

ABINGDON UNION.

42. Cumnor - Pop., 1,021 - Acr., 6,800.
Cultivation mixed.

Rev. F. G. Henley says, "The cottages are fair "and improving. There is sufficient for the labour. "Some few are crowded, but not as a rule. We have "never heard of any case of immorality resulting "from it. Plenty of water to nearly all. They are "old fashioned cottages. Nearly all gardens or allot-"ments; most of the people have both. The allot-"ments are about half a mile from the village.

"The women in this parish do slop work, *i.e.* "smock frock, trousers, and waistcoat making for the "Oxford and Abingdon ready-made shops. They "earn, take the year through, about 4*s*. a week, but "have to work late to do it."

43. Frilford - Pop., 1,111 - Acr., 4,948.
Cultivation mixed.

J. Aldworth, Esq., landowner, says of the cottages, "They are very good, not enough in number to supply "labour, well situated, not overcrowded, plenty of "water, and well ventilated. They have all good "gardens."

Berkshire.

Mr. Culley.

B.
j.

44. Kingston Bagpuze - Pop., 283 - Acr., 1,180.
Cultivation chiefly arable.

J. Blandy Jenkins, Esq., landowner, says, "The "cottages are mostly in good order, and are more than "sufficient for the supply of labour, and are conve- "niently situated, and are not overcrowded; are well "supplied with water, and are well ventilated. All "the cottages in my parish have good gardens adjoin- "ing them, and I should say that in the neighbour- "hood generally they have gardens."

45. Longcot - Pop., 446.
Cultivation mixed.

Mr. John Fairthorne, occupier and guardian, says of the cottages, "They are not very good, but quite "sufficient for the supply of labour. They are con- "veniently situated and not overcrowded. They are "well supplied with water and well ventilated. All "the cottages in the parish have gardens or allot- "ments."

46. Steventon - Pop., 886 - Acr., 2,382.
Chiefly arable; rich loam.

This is an uninclosed parish, the Dean and Chapter of Westminster being lords of the manor; it is now in the hands of the Ecclesiastical Commissioners, and will probably soon be enclosed. The following is extracted from the Assistant Commissioner's notes on this village:—

Eleven old thatched cottages of the very worst description near the railway station by the side of the brook, which drains any filth washed into it and sewers to make the tea of the inhabitants. These cottages have each of them one bedroom, *i. e.* a room open to the thatch, which in any other house would be called an attic, with a window on the floor, and are approached by a ladder. One of these, in which Wm. Brewer lives, belongs to a maltster in Abingdon, for which, with a shed at the back, he pays 2*s.* a week rent; two belong to a charity and are let at 6*d.* per week, and eight belong to the parish and are let at 6*d.* per week. Anything more unfit, inside and out, for human habitation it would be difficult to conceive. In one lives a Mrs. Prior and her daughter and five children. There are two very bad cottages on the hill above, one belonging to the man who occupies it, and the other to the railway company. Railway workmen occupy the best cottages in this village, which is badly supplied with clean water and very much too well supplied with dirty. If there is not always typhoid fever in Steventon, it is not for want of a standing invitation.

46*a*. In 1864 a very excellent school was erected in Steventon at a total cost of 1,066*l*. 8*s*., which was made up by the following contributions:—

	£	*s.*	*d.*
Sale of old school	160	0	0
Government grant	174	10	0
Grant from National Society	30	0	0
Oxford Diocesan Education Society	20	0	0
Offertory at Ruridecanal meeting	3	0	0
Church collection	15	8	0
Dean and Chapter of Westminster (lords of the manor)	100	0	0
The Rev. H. Waddington, vicar	433	0	0
Subscriptions, chiefly from residents in the parish	130	10	0
	£1,066	8	0

[The living is described in the Clergy List as of the annual value of 160*l*., and in the County Directory as being worth 260*l*.]

WALLINGFORD UNION.

47. Long Wittenham - Pop., 583 - Acr., 2,115.
Cultivation is chiefly arable.

Rev. J. C. Clutterbuck says, "The cottages in this parish are in bad condition (the neighbouring parishes, Clifton and Little Wittenham, are better); they are nearly all in the village, scarcely sufficient for the supply of labour required; their situation with reference to the farms is a minor evil. I do not know of *direct* moral evils with reference to overcrowding, that is an evil. Well supplied with water, but generally badly ventilated.

"The cottages in this parish (and neighbourhood) have generally fairly good gardens. I let five acres of land near the village in 50 allotments. I have reason to believe this has worked well. The rent 5*s*. per annum.

"There are about 22 cottages belonging to St. John's college, nearly all let on lease or copyhold with the farms. They are in *very bad* condition."

47*a*. MY DEAR SIR, March 13th, 1869.

I SEND you an account or rather abstract of an account of the school in this parish for 22 years, up to the time the children may be cast on their own resources. It is a curious fact that in a parish purely agricultural so many should have left the parish, the number of emigrants does not include those who have died abroad, this would make it about 30. It is a great mistake to think that our rural population sticks to one place; this is so no doubt when they are settled in life, but the young bees certainly leave the hive—especially the females. If they looked to field labour this would not be the case.

Yours faithfully,

G. Culley, Esq. J. C. CLUTTERBUCK.

An account of the children who have passed through the school at Long Wittenham, from 1833 to 1854 inclusive.

Population of the parish, varying from 550 to 600.
First admission 57, when the school was opened.
Average of admissions yearly 20.

Total during 22 years - 213 males, 187 females.

Of these,—

Known to be dead, some having left the parish	75
Living in the parish at present	128
Left the parish	197

As a rule the best conducted have left the parish. Of these 25 have emigrated either to the United States or to Australia or New Zealand.

It is difficult to ascertain the time under instruction; most were admitted as infants at 3 years. There has been a decided tendency of late, and by a somewhat regular progression, to leave school at an earlier age.

None, that I am aware of, have been tried or convicted of any serious offence.

The period taken includes all that may be fairly supposed to be on their own resources.

The whole number admitted to the present time, March 1869, is 648 from February 1833.

Of these there are now in the parish 83 males and 45 females; left the parish 85 males and 112 females. This excess of females leaving the parish is due to marriage and domestic service.

48. South Moreton - Pop., 371 - Acr., 1,300.
Cultivation is mixed.

Mr. S. Hart, occupier, says, "Some very good "cottages and some convenient for the farm. All "the cottages have good gardens.

"Carters are hired by the year from Michaelmas, "and unless it is stated at the hiring that we will "not keep a man in sickness, we are bound to do so. "I have five cottages let with my farm, and I think "every farm ought to have such cottages for the use "of shepherds, cattle-men, and carters. My carters "have 12*s*. a week, a cottage and garden rent free, "and 3*l*. at Michaelmas; they get a week or two to "reap by piece work in harvest.

"My shepherd has 12*s*. a week, cottage and gar- "den rent free, and 3*l*. at Michaelmas; he also has "1*l*. for lambing and supper for a month, and in har- "vest he gets some reaping with his wife.

" Day-labourers are now at 11*s.* a week, they were " at 12*s.* a week ago, but we sunk them 1*s.* because " corn went down (December 1868). They have 20*s.* " a week in harvest for four weeks, and what more " they can earn (with a wife and child they generally " draw 2*l.* or 3*l.* more); for carting they have 3*s.* a " day. In hay time they have 2*s.* 6*d.* to 3*s.* a day " and beer. We allow a gallon a day, but they are " never satisfied. One of my neighbours gives 1*s.* " extra per day instead of beer.

" Women have 8*d.* for short days, 1*s.* when work- " ing men's hours, and 1*s.* 6*d.* for long days in har- " vest and hay time."

BRADFIELD UNION.

49. Beenham - Pop., 505 - Acr., 1,728.
Cultivation is chiefly arable.

Rev. T. H. Bushnell says, " The construction of " the cottages is too various to admit of general " description. Ventilation is usually by means of a " window which can be opened, fire-places are usually " stopped up by the tenants. Drainage is very de- " fective, the sewage forcing its way into open ditches " at the back of the cottages. Water supply is also " defective, the people in a dry summer being obliged " to go long distances to procure sufficient water. A " large majority of the cottages have no, or very " small, gardens attached to them. Some belong to " the landowners, most to small tradesmen. Rent " varies from 1*s.* to 2*s.* a week."

49*a.* The accounts for 1868 of the Beenham school show that the total expenditure for the year amounted to 41*l.* 11*s.* 8½*d.*, of which 17*l.* 16*s.* 2*d.* was paid by school pence and sale of books, leaving 33*l.* 15*s.* 6½*d.* to be made up by subscription. This school is a very efficient one, and is conducted at this comparatively low cost from the fact that the salary of the mistress only amounts to 22*l.* 10*s.* per annum

The clothing club shows an expenditure of 66*l.* 6*s.*, and is provided for as follows :—

	£	*s.*	*d.*
Deposits	49	14	8
Interest	1	9	7
Subscriptions in aid	15	1	9
	£66	6	0

50. Bradfield - Pop., 1,167 - Acr., 4,020.

Rev. T. Stevens says, " The cottages in this parish " are not good, the rooms small and ventilation bad. " Very few cottages have three rooms; the majority " have two, but some only one, bedroom. Water " supply in some localities bad. Rent about 3*l.* per " annum."

50*a. Mr. Charles Witherington*, occupier and guardian, says, " The cottages are generally bad; they are " deficient in number for the supply of the labour re- " quired; they are very inconveniently situated with " respect to the farms; they are not overcrowded " now, as the guardians in board have attacked that " nuisance vigorously. In places the cottages are " badly supplied with water and badly ventilated. " The garden ground varies in size and quality very " much. Some gardens are very bad, as a rule only " about from 10 to 15 perches. No allotment ground. " I believe that a larger garden would enable the " man to pay for a better cottage a fair rent. I " should like to see one rood of ground to each " cottage, and every one contain at least two if not " three bedrooms."

50*b. Mrs. Wm. Sidy.*—" My husband is a farm la- " bourer, he has 11*s.* a week now when he gets work " full time. We pay 30*s.* rent for our cottage (a very " poor thatched one) and garden. Wages were 12*s.* " about six weeks ago (January 1869); they have sunk " them because bread is cheaper. There are not many " men out of work about here. I worked out a little " before I was married and a short time after. Most " young women get out to service and that is a great " deal the best place for them."

50*c.* Three very poor cottages at Tuch Clump and two or three poor ones at Cock Lane. (The cottages in this and some of the neighbouring parishes, as Beenham, Ufton, Sulhampstead, Burghfield, &c. are very much scattered, there being no particular collection of cottages which could be called a village.)

50*d. Mrs. John Froude.*—" My husband (a carter) " has 12*s.* a week, a cottage rent free (a very poor one " with one bedroom), and 2*l.* at Michaelmas; when " a carter pays his own rent he has 5*l.* or 6*l.* at " Michaelmas. In this parish the men have 11*s.*, " in Beenham they have 10*s.* I have six children at " home and two girls out at service; they went at 13. " Most girls get out to service easily here, and its " better for them than field work. I have two boys " at work, one of 11 hired by the year as a plough- " boy; he gets 4*s.* a week and 2*l.* at Michaelmas; the " other is 10, he is to get 3*s.*, he goes with a pony " cart for a farmer." The house next Mrs. Froude's has five persons sleeping in one bedroom, the youngest 14.

51. Burghfield - Pop., 1,139 - Acr., 4,133.
Cultivation is mixed.

Mr. A. F. M. Druce, occupier and guardian, says, " The cottages are very bad, being principally built " by the labourers themselves on waste grounds. " They are insufficient for the supply of the labour " required; they are not conveniently situated with " respect to the farms; to my knowledge the cottages " are not overcrowded; in many parts they are badly " supplied with water. The chief part of the cottages " have good gardens."

51*a.* [Most of the cottages in this parish have been built by the labourers themselves, and are held by them at a quit rent of 4*s.* 6*d.* to 8*s.* 6*d.*, according to the quantity and quality of garden ground attached to them. All such cottages have ground varying in quantity from about 20 to 80 poles (⅜th to ½ an acre), and I found that some of the quit rents had lately been raised. These squatters cottages are scattered about all over the parish, but most plentifully in the common; the pattern is usually the same, though the condition of the cottages varies from tolerably good to very bad (some examples, such as those occupied by William Crocker, James Day, and others, being altogether unfit for habitation). The usual squatter's cottage consists of walls of mud or brick, or both, with a thatch roof enclosing one living and one bedroom, both on the ground floor, with occasionally an additional so-called bedroom covered by a lean-to at the back. The occupiers of all the cottages which I visited pay their quit-rent to the Earl of Shrewsbury. There is a parish school near the church and another school erected and maintained by Mr. Bland, placed as conveniently as possible for squatters on the common. Some part of the parish lies wide of the school. I visited one family living in a very bad waste cottage with half an acre of garden round it, for which 8*s.* 6*d.* is paid. There are six children of this family (five above 7 years of age), none of whom have ever been at school (the cottage is two miles from the school). The walls of this cottage were largely adorned with sheets of the *Police News*, whilst those of another waste cottage in good condition close to it were ornamented with very presentable scriptural pictures. The result of the cottage system in this parish is that one occupier of 500 acres has no labourer (except some boys lodging in his house) who comes less than 1¼ miles to his work (one comes 3 miles). This gentleman suffers so much from the want of cottages that he informed me he had offered 7 per cent. on the outlay if his landlord would build a sufficient number for his servants who have to attend to live-stock.—G. C.]

52. Englefield - Pop., 392 - Acr., 1,500.
Cultivation is mixed.

Rev. F. J. Eyre says, " The cottages belong to the " landowner, and the rents are moderate."

Berkshire.
Mr. Culley.
B.
j.

The cottages in this parish are many of them (29) new and all well cared for.—G.C.

52*a*. The following evidence was given by Mr. Turner, agent to Mr. Benyon.

"The parish of Englefield has one labourer's cottage for every 21 acres of land; the parish of Mortimer with West End has one labourer's cottage for every 22 acres; the parish of Ufton has one labourer's cottage for every 31 acres, but three-tenths of it is woodland.

"We have built during the time I have been agent, namely, 12 preceding years, 64 new labourers' cottages at an average cost of 110*l*. each or 220*l*. the pair; six others are now in hand, exclusive of school houses and curate's cottage; 11 new farm houses with entire sets of new buildings; 4 new farm houses smaller; 1 doctor's house; 1 public house (small)."

Of wages Mr. Turner, who has charge of one of Mr. Benyon's farms, says, "I have paid between "Michaelmas 1867 and Michaelmas 1868 to F. Cooper "(our best carter) 39*l*. 16*s*. 10*d*., S. Horn (a useful "good labourer) 34*l*. 16*s*. 1*d*., C. Collins (an average "good carter) 35*l*. 4*s*. 10*d*.; these sums include all "money payments."

52*b*. The following account of men's earnings is given by Mr. William King, who has charge of Mr. Benyon's other farm.

"Cash received for 52 weeks' labour performed for R. Benyon, Esq., M.P., on Chalkpit Farm, Englefield, Berks, from January 3rd till December 31st:—

	£	*s*.	*d*.
By James Wickins	37	1	5
By David Day	38	6	10
By George Allen	36	12	8
By Thomas Hoin	37	19	8
By Thomas Dixon	35	4	4
By James Allen, senior	35	1	4

53. Grazeley - Pop., 648.
Cultivation is mixed.

W. J. Mount Esq., J.P., says, "Speaking generally "the cottages in this parish are bad; in the neighbourhood I think they are better. There are quite "enough for the requirements of the farms, and conveniently situated for that purpose. Many of them "are badly supplied with water, and the ventilation "indifferent. Some of them are overcrowded, and "the moral tone of the inhabitants is evidently "lowered by this. There are gardens, and in some "cases there are allotments in addition."

54. Mortimer-West-End - Pop., 461 - Acr., 2,363.
Cultivation chiefly arable.

"In my parish five cottages have three sleeping rooms, four of these cottages being very good; 33 have two sleeping rooms, 19 being fairly good, the rest defective as to space and repair; 26 have one sleeping room only. There are more cottages than the demand for farm labour in this place would require. They are conveniently placed with respect to the farms. Four of the two-bedroomed cottages are decidedly overcrowded. I need say nothing with respect to those with one sleeping room only; they speak for themselves. In the 12 years I have been here no facts have come to my notice which prove this want of proper accommodation to have been the cause of immorality. Such huddling together of all ages and both sexes must obviously degrade the moral sense. Water supply good. Ventilation in most of the cottages sufficient. All the cottages here have good gardens.

"My 'parish,' ecclesiastically speaking, does not include the whole of Mortimer-West-End, which is a distinct parish so far as the support of the poor, &c., is concerned. The population of my district is 345, and my return of the cottages refers to this portion of the tithing only. I have not included in it houses inhabited by those who are not usually included among the 'labouring classes,' *e. g.* families of gentlemen's servants, small tradesmen, public-houses, &c.

"The indifference of some of the parents to their children's education shows itself in the irregularity of the children's attendance, not in withdrawing them altogether from school before they are of the usual age for leaving school. Except in the matter of shoes, poverty is no hindrance to the children's schooling, for I have never met with a woman who did not admit that the 1*d*. fee was amply repaid in the week by the saving in her children's clothes. The mothers (three) of illegitimate children have all come home pregnant from service."

55. Ufton - Pop., 367 - Acr., 2,080.
Cultivation is mixed. 600 acres in woods.

Rev. Jas. Fraser says, "The cottages are generally "of brick and slated. A considerable number are "thatched; in many the lower rooms are not ceiled. "The rooms vary considerably in size. The only ventilation is by doors and windows and chimneys; a "large number are very smoky. There is not often "a nuisance in respect of drainage. The water "supply is fairly accessible and abundant. In some "cases there is a deficiency of outhouses and of privies. "Almost all the cottages belong to the landowners; "only one belongs to a tradesman. The rent is moderate, from 1*s*. a week to 3*l*. and 3*l*. 10*s*. a year. "*Most* have good gardens, *all* have *some* garden. "But, speaking generally, the cottages are not in a good "state of repair, and a few originally erected by "squatters on the waste, and which are at present "held upon lifehold under the lord of the manor, are "unfit for habitation, and only fit to be condemned."

55*a*. *George Brimsden*, 18, hired by the year at 8*s*. a week and 5*l*. at Michaelmas; had 7*s*. and 4*l*. last year. Has lodgings found him in farm house, but no board. Can read and write well (was at school till he was 14). Does not think any of the other four lads who lodge with him can read or write.

The cottages, which are scattered about over the parish, are sufficiently described by Mr. Fraser.

55*b*. Speaking of the lad Brimsden and of the custom of hiring lads by the year and finding them lodgings in the farm house or elsewhere, Mr. Fraser says:—

"He (Brimsden) is one of those boys hired by the year and put, a lot of them, into a place which they occupy by themselves, with nobody responsible for looking after them, who are utterly ungetatable by any civilizing or improving influences. It is an arrangement which I should be heartily glad to see broken down. The boys themselves,—at least the mass of them,—like it, because it makes them independent; but it is fraught with mischief to them in every way. These particular lads on Case's farm,—there are four of them,—live 2½ miles off; so it has been hopeless to persuade them to attend night school.

"I endeavoured to persuade him to be confirmed, but without success.

"I quite agree with your suggestion as to the proper remedy for doing without these 'off-hand' boys, viz., a sufficient number of cottages attached to the farms."

56. Sulhampstead - Pop., 432.

A parish with cottages scattered about in it and no village. The chief landowner has 51 cottages, and eight in the adjoining parish of Burghfield. All of these cottages are in good repair, with two or three bedrooms; and the Assistant Commissioner was very much struck with the neatness and cleanliness of about 12 which he visited. Of four of these 12 the mistresses work out when they can get work, and their houses are equally well kept.

All the cottages appeared to keep pigs and a good supply of bacon, with a well stored dresser, and shelves were prominent features in each cottage. Some of these cottages are very roomy, being old farm houses converted, and some are newly built brick cottages of a very good description. The rent, with a garden of

from 16 to 20 poles (which all have), varies from 1*s.* to 1*s.* 6*d.* a week.

56*a*. *Mr. Thos. Leaver,* bailiff to M. G. Thoyts, Esq. —"All the cottages on Mr. Thoyts' estate are in good "condition, and are well looked after. There are 51 "in Sulhampstead and eight in Burghfield, scattered "about the parishes in blocks of two cottages gene- "rally. Each cottage has a garden of from 16 to 20 "poles, which I consider sufficient. The rent varies "from 1*s.* to 1*s.* 6*d.* per week. Mr. Thoyts ploughs "with two horses in reins, and does not employ any "ploughboys. Ploughmen when with horses work "from 7 a.m. till 11 a.m. and from 1 p.m. to 5 p.m. in "summer, and as long as it is light in winter. Mr. "Thoyts uses a steam plough; the two engineers "have 18*s.* a week each, and the man who guides the "plough has 14*s.* These men have no extras. We "have three lads of from 16 to 17, who are called "engine boys. They are paid 6*s.* 3*d.* to 7*s.* a week, "and have 4*l.* to 5*l.* at Michaelmas. A carter has "12*s.* to 11*s.* a week, as ordinary wages are 11*s.* "or 10*s.*, and 6*l.* 10*s.* to 6*l.* at Michaelmas. A "cowman has the same, with 6*l.* at Michaelmas. "Shepherd has 14*s.* a week and 6*l.* at Michaelmas, "and 1*l.* per hundred for all lambs cut and tailed. "We do not cut our corn with a machine, because we "can get plenty of hands."

Newbury Union.

57. Shaw-cum-Donnington - Pop., 680 - Acr., 1,989.

The chief landowner, Mr. H. R. Eyre, has 35 cottages for 1,500 acres, of which 150 are wood, 150 water meadow, and 1,200 let in farms, chiefly arable. Of these 20 are newly-built very good cottages, with three bed-rooms, built in blocks of two each, costing from 300*l.* to 400*l.* per block, and are placed in different parts of the estate, where healthy sites presented themselves convenient for supply of labour to the different farms. The other 15 cottages belonging to the estate are old cottages enlarged and improved. There are in addition cottages built on the waste and on charity lands, which supply labour to this property. The 20 new cottages were built to replace a number of old ones inconveniently placed at one end of the parish, the proprietor regarding cottages in the same light as other necessary farm offices. Each cottage has 20 poles of garden, and some of the labourers have in addition 20 poles of allotment ground, paying for the cottage and garden 4*l.* a year, and for the 20 poles of allotment ground 6*s.*, *i.e.*, a farmer's rent plus the rates and taxes paid by the landlord. The whole educational provision for this parish is left to Mr. Eyre, who is now waiting for some Governmental interference to compel the other landowners to bear their share of the expense necessary for enlarging the school. Mr. Eyre is decidedly in favour of an educational rate for such purposes levied on the *owners* of property.

58. Thatcham - Pop., 2,729 - Acr., 8,000.
Cultivation chiefly arable.

G. White, Esq., landowner and occupier.—"The "cottages are certainly on the whole not very good. "I think them perhaps worse in this parish than in "some others of the union. They are quite sufficient "for our own labour, and supply labourers to other "parishes. My own farm has not a single cottage. "The late Mr. Tull and Mr. Northway bought up "cottages to exclude liberal voters from the county. "The results to morality are precisely what would be "expected under similar circumstances. The water "supply is almost nil, and little or no ventilation."

"My own cottages in the adjoining parish of Shaw have excellent gardens, and out of the village of Thatcham most cottages have tolerable gardens. In the village most persons have allotments conveniently situated, but expensive enough. The allotments are let by the parson and by the chief tenant farmer at 6*d.* a pole, four pounds an acre!!"

59. Welford - Pop., 1,030 - Acr., 5,086.
Cultivation chiefly arable.

Mr. T. Tanner, owner, occupier, and guardian.— "A great part of the land of this parish belongs to "C. Eyre, Esq., and he has done and is doing a good "deal to the cottages under his control, and takes "care they are not overcrowded. Those belonging "to some others are not so good, and especially where "they belong to small proprietors.

"The greater part of the cottagers throughout the parish have a cottage and 20 poles of ground for 1*s.* per week."

59*a*. Copy of a letter from Mr. Tanner to the Assistant Commissioner.

Dear Sir,

Yours to hand of the 7th inst., which I will endeavour to answer. As to Mr. Cherry's (chairman of the Hungerford Union) observation that the work is left to old men and boys: for the last few years the drain of young men from the country districts has been very great, but since the stoppage, to a great extent, of engineering works, the discharge of soldiers, and the railway companies not being very prosperous, there has been rather a reaction, and this winter we have seen more young men out of employ than for some time past.

I do not think a scarcity of labour would injure to any great extent the employer or the employed, as we should bring machinery to our assistance and we should soon get a more intelligent class of men. I think you will find as a rule where there is a resident landlord, who is in a position to assist his poorer neighbours, that the agricultural labourer is better off than he has ever been. That is the case here. You will find a very few cases of real distress, and where it does exist it is from the effects of drunkenness, and that is caused from the "beershop," the curse of this country, being brought to their own doors. I think if our rulers would turn their attention to this, it would be a certain step towards improving the condition of the working class. They themselves would be glad to have the temptation removed.

With regard to the more immediate inquiry, I think very few children are employed under nine years of age in this locality. There may be a few bird keeping, attending cattle, &c., for a few weeks in the summer. Since there have been so many openings for young men, the labourers are anxious that their children should have a certain amount of education, and I have one or two cases where the parents have stipulated that the boy should go to school for the winter months from November 1st to February 1st, or longer if I could spare them. I do not think this parish quite a fair specimen, as the poor have so many advantages which are not to be found in many places.

I have given in the return a statement of the actual earnings of three men, exclusive of anything earned by the wife and children during harvest. I think they may be taken as a fair average, as I have men (whom you would not call skilled labourers) who earn a good deal more, and some who are scarcely able bodied who earn less. I find in many places the cottage accommodation very bad and very crowded, particularly where there is no resident landlord or where you are dependent on speculators for cottages. I think a great deal of evil arises from young girls working in the fields, and if they could be restricted from it they would be induced to go to service and eventually do better for themselves.

There can be no doubt one of the most crying evils of the day, both in town and country, and which are the source of nearly every evil which befalls the labouring class, are the gin shops in the town and the beershops in the country. I do not think that any great amount of evil arises from agricultural labour, either mentally or physically, except through the medium of the latter of these abominations.

Yours respectfully,

G. Culley, Esq. Thos. Tanner.

Berkshire.
Mr. Culley.
B.
j.

59*b*. The following is the statement of the earnings of three average able-bodied labourers referred to by Mr. Tanner in his letter :—

No. 1 earned in 1867, 39*l*. 19*s*. 8*d*.; in 1868, 36*l*. 12*s*. 4*d*.
No. 2 „ „ 40*l*. 9*s*. 6*d*.; „ 36*l*. 17*s*. 6*d*.
No. 3 „ „ 36*l*. 0*s*. 2*d*.; „ 32*l*. 11*s*. 2*d*.

In a note Mr. Tanner says, "Nos. 1 and 2 had a "better opportunity from task work than No. 3, who "has the lowest amount of earnings of any able-bodied "man I employ."

It will be observed, that these men earned on an average 3*l*. 9*s*. 5*d*. less in 1868 than in 1867, and that in both years they held the same relative position in regard to amount of earnings. In 1867 their average weekly earning was 14*s*. 9*d*., in 1868 it was 13*s*. 7*d*.

60. Winterbourne - Pop. 377.
Cultivation chiefly arable.

Mr. R. Fisher, occupier and guardian : "The cot- "tages are generally near the farms, and most of them "have gardens."

Hungerford Union.

60*a*. Kintbury - Pop., 1,802 - Acr., 7,645.

G. C. Cherry, Esq. landowner and chairman of board of guardians, says, "The condition of the cot- "tages is not such as I wish to see it. The system "of drainage in the village is bad. There are many "small cottages, seldom more than two sleeping rooms, "with privies built close to the living apartments, and "in many instances one only to three or four families. "Cottages are much wanted in the parish. Those "which exist are tolerably convenient to the farms, "but I do not regard proximity to the farms as of "permanent importance in the placing of cottages. "To be near the church, the schools, and the village "shop is at least equally important. Some of the "cottages are overcrowded, on which state evil results "to morality must follow, but I cannot quote any "particular instance of such mischief. Probably the "bad state of the home is generally only one of several "causes of immorality. The supply of water is good "from wells and dipping places. The cottages are "situate in rows or are detached, and the opportunities "of ventilation are sufficient, but frequently they are "not used. Most of the cottages have gardens, but "probably it would be an exaggeration to speak of "the gardens being on an average 12 perches in ex- "tent. There are convenient allotments of land for "some."

Wokingham Union.

61. Barkham - Pop., 280 - Acr., 1,050.
Cultivation is mixed.

Rev. A. Roberts says, "The cottages, with a few "exceptions, are commodious and owned by land- "owners. The average rent is 1*s*. 6*d*. a week. The "population in this parish is so exceptionally small "that there is some difficulty in answering some of the "questions in this paper. We have only about 30 "cottages of any kind, and about 10 labourers' "families."

62. Bearwood - Pop., 750.

The cottages in this village and parish belong to the landowner. Most of them are new and in every respect excellent. There is also an excellent school maintained by the landowner without any Government grant, the master not being certificated. The attendance, which not only includes all the available children in the parish, but many from neighbouring parishes, some children walking as many as four miles to school, attests the success of the teacher, as well as the general management of this school. Absence without sufficient cause is looked upon as so grave an offence that children seldom present themselves after missing a day's attendance without an explanatory note from their parents, some specimens of which were shown to the Assistant Commissioner, as well as a medical certificate which the parents of one family had thought it necessary to send to the master. The architectural arrangements of this school are very good.

62*a*. Evidence of *Mr. Simmons*, bailiff to Mr. Walter.

"I asked four of our men this morning what size of garden or allotment they would like. They all said that 25 poles, the quantity which Mr. Walter allows, is sufficient. Day men in this neighbourhood are paid from 11*s*. to 12*s*. a week. When at day work we pay 12*s*. and give as much piece work as possible. In summer almost everything is done by piece work.

"Our carters look after two horses each. They get 12*s*. a week, a cottage and garden, worth 4*l*. a year, and 2*l*. at Michaelmas. That, with about 1*l*. for extra hours in harvest and beer in haytime and harvest, is the whole wage. Ten of our 28 men are carters. The use of the steam plough reduces the number of horses, and therefore of carters. It makes way, however, for some labourers at higher wages.

"With Howard's machinery we employ—

1 engineer	at 18*s*. a week.
1 windlass man	at 15*s*. a week.
2 anchor men	at 14*s*. a week each.
1 ploughman	at 14*s*. a week ; and
3 boys	at 8*s*. a week each.

"Our drainers at piece-work earn about 18*s*. a week.

"A man and his wife in harvest should earn 30*s*. a week. For day work in harvest we pay 3*s*. a day and beer, say 3*s*. 6*d*. a day. It doesn't much matter, however, how much many men earn ; all beyond what is absolutely necessary to keep their family goes to the beershop.

"Cottages are very dear about here, and if the farmers had them they might be tempted to let them to their labourers at high rents.

"A five-course cropping, taking oats after wheat, is very common about here. Sometimes they make it six by taking wheat, beans, oats after clover."

63. Finchampstead - Pop., 639 - Acr., 3,926.
Cultivation is mixed.

A large portion of this parish is covered with heath and fir wood growing on sand and moorland. A good many cottages have been built lately by Mr. Walter of Bearwood, who is one of the chief landowners ; a free school was also built a few years ago by the same gentleman, and is now supported by subscription. Scattered about the woods are many huts of broom-dashers who earn a hard living by making heath brooms or besoms. The larger proportion of the broom-dashers live in huts built by themselves, for which, with about 1½ acres of poor land, they pay a rent varying from 10*s*. to 15*s*.; others live in brick cottages run up by speculators, paying a rent of about 2*s*. 3*d*. a week for cottage and garden. The huts built by the broom dashers for their own occupation are very much of the same character as the squatters' cottages described in the notes on Burghfield parish. Before the introduction of machine-made brooms, or the instruments which now serve to do the work of brooms, broom dashing was a pretty thriving trade. In those days, too, the heath and handles were to be had for the gathering or cutting, now all is changed except the habits of those who stick to the trade, and prefer their hut on the heath to a better cottage with the restraint of a village or town. Broom dashers have now hard work to earn a living, and the trade is evidently dying out. In manner the broom dashers are somewhat blunt, after the fashion of those who are lords of all they survey, but the bluntness is as far removed from rudeness as from servility. After conversing with these people you cannot help regretting that broom dashing will soon be a thing of the past.

63*a*. The beerhouse nuisance crops up in all its strength in this parish ; wherever a bit of land can be purchased a speculative brewer or publican runs up three or four cottages and a public, trusting to a good

return from the sale of beer if not from the rent of the cottages; if such a bit of land can be obtained near any cottages already in existence so much the better for the beer speculation.

64. Wokingham - Pop., 4,144 - Acr., 8,131.
Cultivation mixed.

Captain Walter, occupier, says, "The condition of "the cottages is fair, vastly superior in every respect "to the houses occupied by the labouring classes in "towns. The supply is not sufficient for labour re- "quired, and I consider no farm complete without "the landlord finds ample accommodation for all the "labourers required to work it."

64*a*. Many children of the agricultural labouring class attend a school attached to the district church, both of which have been recently built by Mr. Walter of Bearwood, who is one of the landowners of the parish. At the time this school was built a Government grant was refused on the ground that such a school was not necessary. There were 95 children in attendance on the day on which the Assistant Commissioner visited it, and the annual grant for last year was, he was informed, upwards of 50*l*.

64*b*. *Captain Walter*, occupier, gives the following evidence as to wages, earnings of men, &c.: "Collier, "a thatcher, hay-cutter, &c., receives 2*s*. 3*d*. per load "of 36 trusses (this price includes delivery into barn); "he receives the same price for cutting a load of hay "into chaff (engine power and machine being found "him); for thatching he receives 10*d*. per square "(100 feet). When not employed at piece work his "ordinary wages are 2*s*. 2*d*. per diem in winter and "2*s*. 6*d*. in summer. When his wife and boy assist "him their joint earnings are about 35*s*. a week at "piece work. Alexander, shepherd, has a good "house, &c. rent free, wages 14*s*. a week, 30*s*. per "hundred for lambs, and extra pay for shearing. "Small, a carter, has 12*s*. a week, with 6*l*. at Mi- "chaelmas, 3*d*. per hour overtime, and in harvest 6*d*. "per diem in lieu of beer, and 6*d*. per diem for long "journeys. Willis, a labourer, employed chiefly at task "work such as draining and trenching, can earn from "15*s*. to 18*s*. a week. As a rule, every sort of work "on Tangley farm is let by the piece, and in course "of time we hope there will be scarcely an ex- "ception to this. Last year I mowed more than 100 "acres of grass by Wood's machine, giving the men "3*d*. per acre in addition to their beer money and "standing wages. At this rate they were able to "earn 5*s*. per diem of eight working hours.

"Labourers are generally wanting in energy and "intelligence, and I do not think that the best "school education will be of much avail where farms "are small, and the occupiers consequently but little "raised above their men."

64*c*. *Mr. George Ross*, bailiff to Captain Walter, says, "The average wages of our day-labourers are in "winter 12*s*. to 13*s*. a week, in summer 13*s*. to 15*s*. "with an allowance of beer in hay time and harvest. "Strong active men draining can earn from 20*s*. to "22*s*. a week, and trenching from 15*s*. to 22*s*. a "week, with moderately dry weather.

"It is desirable that boys should be kept pretty "closely at school until they are 12 years of age, and, "even if they are not refreshed with a little schooling "for some years after, few of them will make the "farm labourer that is wanted in these times.

"I think it is desirable that females under 14 years "of age should not be employed in agriculture; after "14 they might be employed in weeding and assist- "ing in hay and harvest work. If they are well "taken care of at home I do not think that agricul- "tural work will hurt the female constitution or "affect their after usefulness."

[Mr. Ross, who gives this evidence, is a native of Aberdeenshire, and has raised himself from the position of an ordinary farm-labourer.]

Windsor Union.

65. Windsor.
Cultivation chiefly pasture.

Mr. Henry Tait, occupier for Her Majesty, says, "The cottages on this farm and all the Crown pro- "perty are good and convenient, and are well situated "for the farms, but it is not generally the case in the "parish and district; they are badly constructed and "overcrowded, and not well situated for the farms, "they are not well supplied with water, and badly "ventilated."

"The cottages generally have not good gardens, "some have allotments, but too far from their cottages."

65*a*. [All the labourers in regular employment on the Shaw farm are housed on the premises except four. Seven single men have lodgings in what in Scotland would be called a bothie (except that it approaches nearer a "model lodging" than an ordinary "northern "bothie"); downstairs are a living and cooking room, and upstairs a separate bedroom or partitioned recess for a bed for each man. These men cook for them- selves, an operation which generally consists of boiling a bit of bacon once a week. The bothie or barrack is looked after by the wife of a ploughman who lives next door. The same barrack or bothie system exists at the dairy and Flemish farm. In the latter case as well as at the Norfolk farm some of the labourers come a considerable distance to their work, and the Flemish farm barrack is only visited by a female overlooker twice a week. Five men are housed in this manner, each having a separate bedroom, with the same down- stairs arrangement as at the Shaw farm.]

65*b*. Of the wages, *Mr. Brebner*, manager of the Norfolk and Flemish farms, says, "Wages for day "men are now (January 1869) 13*s*. a week. Carters, "single men, hired by the year, have 10*s*. a week "and 8*l*. at Michaelmas, with an addition of 5*s*. a "quarter if they keep their harness clean."

65*c*. [At the sawing yard and workshops which are in the Park the three or four cows are kept by Her Majesty for the use of the workmen and their families, the milk being sold to them at a very low price, just sufficient to pay the wages of the man who looks after the cows.

65*d*. There is an educational and industrial school in Windsor Park, entirely supported by the Queen, where about 120 children of persons employed by Her Majesty are educated free of expense; of these 50 boys and 50 girls are clothed (the boys in jackets and knickerbockers of black and white checked Scotch cloth and black leggings, the girls in a dress of a smaller check, with a scarlet cloak for winter); 30 boys and as many girls receive a dinner every school day, and 12 boys and as many girls under 7 years of age are admitted without either of these privileges. The school is an excellent building, with all the appliances necessary for teaching the girls cooking, baking, and washing, and there is a large garden where the boys receive their out-door training. A child of any person employed by Her Majesty is eligible after seven years of age if it can pass the first standard of the Revised Code, and may remain, a boy till he is 15, a girl till she is 16, during which time each child costs the Queen about 6*l*. 10*s*. per annum, according to the information I received from Mr. Warren, master of the school.—G. C.]

Rules of the Royal Schools, Windsor Park.

Admission.

1. That none but the children of parents actually employed in the service of the Queen be eligible to the school, except by Her Majesty's commands.

2. That the school consist of 50 boys and 50 girls, clothed uniformly during school-hours at the expense of H.M. the Queen.

3. That 30 boys and 30 girls be provided with dinner on the days of attendance.

4. That upon a vacancy at dinner the place be supplied from the remainder, regard being had solely

Berkshire.
Mr. Culley.
B.
j.

to the good conduct of the boy or girl in the selection made to fill up the vacancy.

5. That exclusion from the dinner be the punishment generally awarded to misconduct, either by suspension from it for one day or more, or dismissal from it altogether, according to the gravity of the offence.

6. Twelve children of both sexes under 7 years may be received into the school, but without any of the above privileges, in order to be prepared for subsequent admission; but this will not constitute any prior right of admission over other candidates, if prepared properly for the first standard (Revised Code).

Attendance.

1. The days of attendance are Monday, Tuesday, Wednesday, Thursday, and Friday.

2. That the hours of attendance in school be as follows:—

From March to October from 9 till 4.30 o'clock.
From October to March from 9 till 4 o'clock.

3. That the children do attend regularly, punctually, clean, and dressed in the clothes provided by Her Majesty. These clothes are to be taken proper care of by the parents at home, according to the circular issued to them by the managers.

4. That no child be absent without making application to the master or mistress, and stating the ground of the application.

5. That if any boy or girl be absent without leave the master or mistress shall inquire into the cause; and if such absence continue and the child's attendance be in any way irregular, they shall report such child to the managers of the school.

6. That if such irregular attendance continue the child shall be dismissed.

Instruction.

1. That the school be inspected every year by an inspector from the Privy Council, and the report of such yearly inspection be forwarded to the managers, to be by them laid before Her Majesty. No boy or girl can be admitted except qualified up to the first standard.

2. That the instruction be under the care of a master and mistress, assisted by pupil-teachers and under the control and superintendence of the managers of the school.

3. That the children do pay due regard to the teaching and discipline, not only of the master and mistress, but also of the pupil teachers as their assistants.

4. That any failure in respect of this, or any inattention to their instructions, shall be at once reported to the managers.

5. That the school do open and close with prayer.

6. That the instruction be as follows:—

Careful religious and moral training.

Boys.

Reading, writing, arithmetic, geography, history, grammar, etymology, gardening.

Girls.

Reading, writing, arithmetic, geography, history, grammar, needlework, knitting, cooking, baking, washing, domestic economy.

7. That the hours of intellectual teaching and industrial work be specified in a time table, to be prepared by the master and mistress, and from time to time submitted to the managers for their approval.

Leaving the School.

1. That the age for leaving the school be, for the boys 15 years, for the girls 16 years.

2. That the managers have power to dismiss a child for misconduct.

3. That no child (except under special circumstances) be removed from the school without a month's notice of their intention being given by the parents to the master or mistress, and by them submitted to the managers.

By Command of Her Majesty.

Windsor Castle, 1866.

C.
j.

BERKSHIRE EVIDENCE.

APPENDIX C.

CONTAINING EVIDENCE APPLICABLE TO AREAS LARGER THAN PARISHES.

RESOLUTIONS OF BOARDS OF GUARDIANS.

Wantage Union.

66. Copy of Minute made at a Meeting of the Guardians on the 6th day of January 1869.

"Mr. Culley, an Assistant Commissioner appointed to inquire into the employment of children, young persons, and women in agriculture, having attended the meeting for the purpose of obtaining information from the guardians; it is the opinion of the guardians that inasmuch as children under 10 years of age in agriculture are only employed during the summer in this union, no legislative interference is necessary to regulate the employment of children in agriculture."

Correctly extracted from the minute book of the Wantage Union.

Edward Ormond,
Wantage, 7th January 1869. Clerk.

[Assistant Commissioner's notes taken at the meeting of the Wantage guardians on 6th January 1869.

It was stated by the chairman that one effect of the Union Chargeability Act is that farmers instead of employing men whom they do not much want in winter as formerly, now let them go to the union, not caring to save the general fund as they did their own parish. The board decided against the desirability of legislative interference for the sake of education on the ground that the facilities for obtaining education are all that can be desired, and that children under 10 years of age are very little employed. It was generally agreed that the earning of so much money in summer and so little in winter is a cause of mischief to the labourers, whose habits are very improvident.

When the justices discharge a man from farm service who is hired by the year they divide the Michaelmas money into five portions and allow two-fifths for the harvest quarter.]

Faringdon Union.

67. The following is a copy of the resolution passed at a meeting of Faringdon board of guardians on Tuesday the 19th of January 1869, in answer to a question proposed to the board by Mr. Culley, Assistant Commissioner on the Commission appointed to inquire into the employment of children, young persons, and women in agriculture.

"Resolved, that it is the opinion of this board that children under 10 years of age ought not to be employed in agricultural labour."

The above resolution was carried unanimously.

[Assistant Commissioner's notes taken at the above meeting.

Great stress was laid by many guardians on the desirability of encouraging night schools, and on the growing desire for education evinced by the success of night schools in Faringdon union. A landowner who has had considerable experience in the working of the Factory Acts spoke very strongly of the benefits which had been conferred by them on the children employed in large factories.]

ABINGDON UNION.

68. At a meeting of the Abingdon board of guardians held on the 15th of February 1869,* it was resolved after a considerable discussion that "legislative interference with the employment of children in farm labour is not, as far as this union is concerned, desirable."

[Assistant Commissioner's note.—The above resolution was carried by a majority of five to three as against a resolution in favour of restricting farm labour to children (*i.e.*, boys, as girls are not so employed,) to those over 10 years of age. The chief objection to such legislative interference was that where families are large, and consist of children all or nearly all under 10 years of age, an injurious pressure would be put upon the parents by such a restriction; it was urged also that a restriction as to age unaccompanied by compulsory attendence at school would only add to the number of idlers.]

BRADFIELD UNION.

Mr. Culley, H.M. Assistant Commissioner, *re* Employment of Children, &c., in Agriculture.

Copy Minute.

69. "Mr. Culley attended and explained the objects intended by this Commission and in his being present to ask the opinion of the Board of Guardians upon the subject. After a long discussion, it was proposed by Mr. Fraser and seconded by Mr. Poole, and carried unanimously, that no child ought to be employed in agricultural labour under the age of 10 years, unless such child could produce a certificate of being able to read with facility."

[Note.—Several guardians complained of the difficulty of getting ploughboys, which would be increased by any further interference than that suggested in the resolution. It was stated at the same time that there was no lack of adult labourers.]

NEWBURY UNION.

70. Extract from the Minutes of the Board of Guardians of the Newbury Union, in the county of Berks, at their meeting, held on the 2nd day of February 1869, at their board room.

"Mr. Culley attended according to his proposal last week, and asked the opinion of the board whether, taking into consideration the demand for labour in their neighbourhood, they were prepared to recommend that any restriction should be placed upon the age at which boys should be permitted to be employed in farm labour. On the question being put, the board recommended that no restriction should be so placed."

A true copy, dated this 6th day of February 1869.

JOHN TANNER,
Clerk of the said Board.

[Assistant Commissioner's Notes.—The above resolution was carried after a fair discussion, from which some occupiers appeared to be opposed altogether to the education of farm labourers, while others only deprecated legislative interference, on the ground that it would put an unnecessary pressure on the parents of large young families and would fail of doing any good unless school attendance was at the same time made compulsory. It was stated that schools now attracted many children by inducements other than the offer of education, such as shoe and clothing clubs. The fear of an educational rate was also frequently dwelt upon. Upon the whole the feeling of the Board was in favour of a further advance in education, but objected to a resolution in favour of a somewhat extended interference, proposed by a member of the Board, who is also a clergyman.]

HUNGERFORD UNION.

71. At a meeting of the Board of Guardians of the Hungerford Union, held this 3rd day of February 1869.

Present—G. C. Cherry, Esq., Chairman; Mr. J. Miles, Vice-Chairman; Mr. Ward, Mr. Bew, Mr. Thos. Church, F. L. Coxe, Esq., Mr. Kimber, Mr. Atherton, Mr. Redman, Mr. May, Mr. Wallis, Mr. Woodman, Mr. Edmonds, the Rev. J. Butler, Mr. Stagg, Mr. Lewis, H. R. Seymour, Esq., and Mr. Thos. Waldron.

George Culley, Esq., one of the Assistant Commissioners appointed to inquire into and report upon the employment of children, young persons, and women in agriculture, attended the board and fully explained the purport and object of the inquiries he wished to make, particularly with reference to the employment of boys in agriculture.

And the matter having been discussed by the Board,

It was moved by G. C. Cherry, Esq., seconded by Mr. Miles, and carried *nem. con.*,—

"That, taking into consideration the demand for labour in this union and neighbourhood, and the pecuniary resources of the agricultural labourers, this board recommends that some restriction should be placed upon the age at which boys should be permitted to be employed in farm labour."

In accordance with such resolution, it was moved by G. C. Cherry, Esq., and seconded by Mr. Woodman,—

"That the restriction should be, that no boy under the age of 10 years should be so employed, except in the case of any boy of nine years of age who can produce a certificate of his ability to read, write, and cipher."

An amendment to the last motion was made by Mr. Bew, and seconded by Mr. Thos. Waldron,—

"That boys of the age of nine years without such qualification should be employed as farm labourers."

On the amendment being put to the meeting, the same was carried by 9 votes to 8.

[Assistant Commissioner's Notes.—The Hungerford Union maintains the children of widows receiving relief until the boys are 10 and girls 11 years of age, unless any boy or girl under these ages is actually earning wages, and there was no instance on the books on the day of the Assistant Commissioner's visit of a boy under 10 earning wages. The chairman, in moving a resolution in favour of legislative interference for the sake of education, said, "I have for a long "time seen that we should have to provide against a "short supply of labour; the farm work is now practically left to boys and old men, the younger men "go elsewhere to seek labour at higher wages. . . . . "The rate of wages we can only leave to regulate itself "according to the ordinary principles of supply and "demand; but in order to check this exodus of able-"bodied labourers we may as landowners offer the "inducement of better cottages. Nothing will check "the desire to leave the district more than a provision of better houses than exists in many of our "parishes."]

MEDICAL EVIDENCE.

72. *Mr. W. R. H. Barker*, a surgeon of 35 years' standing, one of the medical officers of Wantage Union, speaking of the employment of boys, says, "I do not "think any legislative restriction would be desirable, "as practically boys cannot be overworked two years "running, as they would refuse to be hired the second "year."

* This resolution is copied from the Assistant Commissioner's note-book.

Berkshire.
Mr. Culley.
C. j.

73. Copy of Letter to G. C. from Wm. Lightfoot, Esq., surgeon, M. O., for Harwell district of Wantage Union.

Dear Sir,

I beg to say, as far as my experience of 21 years goes, that a healthier set of women and girls are seldom to be met with, which I consider owing to field work.

Many women work in the fields about here, but very few girls, and they prefer it to needlework, plenty of which they can get from a tailor's establishment at Abingdon.

The boys go early with the teams and seem none the worse for it, but like it. As far as education goes, I have found and have heard many others say that the uneducated make by far the best servants, both in a moral and physical sense, and I may say in principle.

The boys commence at from 10 to 12 years of age. The hours which the women are at work are from 8 to 12 and from 2 to 5, and they have most of them a short distance to go. Their occupation is not laborious, and consists principally in couch picking, except at harvest time, when they reap like the men.

I am, dear Sir, yours faithfully,
W. Lightfoot.

RELIEVING OFFICERS' EVIDENCE.

74. *Mr. Jas. Read*, R. O., and inspector of nuisances, Wantage Union, Vale district: Has been 11 years R. O. "I think the cottages have been improved in "my district, especially on Col. Lindsay's estates and "in the town of Wantage; but there is room for "improvement in many parishes. There are very "bad cottages in nearly all the villages, except in "Lockinge and Ardington. There are some very "bad cottages in Sparsholt, Childery East, and West "Hendred. There are a good many men (about 25) "out of work lately at East Hendred. The young "men don't like the yearly hiring, and they often "break their service to go up the country, but they "generally come back no better off than they went. "I don't think it would put much pressure on the "parents to prevent the children going to work up "to 10, and it would save the boys from being "crippled by early work."

75. *Mr. Tanner*, R. O. Wantage Union, Down District, "There are not many men out of work on the "hills. Boys are employed as young as 9, but not many; "where boys go with their fathers they go earlier; "yearly hiring begins at 10. Girls don't go out till "nearly 12, bird keeping, couch picking and sometimes "dung spreading in winter, and thrashing. Wages "are better on the hills, population is not so thick and "farms are larger; wages vary from 10*s.* to 11*s.* now.

"East Ilsley, 11*s.*

"West Ilsley, 10*s.*

"Harwell in the Vale, 12*s.*

"Cottages are generally good on Mr. Wroughton's "estate and good cottages are growing up on Col. "Lindsey's property, what he builds are thoroughly "good. In all parishes there are good and bad "cottages. I have been relieving officer 15 years; "there is not much difference in the condition of the "labourers, but cottages have been improved during "that time."

76. *Mr. Jas. Jeffries*, R. O., Faringdon Union, "I "think some of the poorest cottages in my district are "in Kingston Isle. In this union we are very strict in "examining into the circumstances of every family by "whom an application for relief is made; the result "has been a great decrease in the expenditure on "out door relief, while the persons who receive relief "are better satisfied than under the old system, and "the labourers generally have been induced to sub-"scribe to benefit clubs, such as the Farmer's Club "at Uffington, The Vale of White Horse Club, and "the Farnborough Club. Where cottagers keep "lodgers we reduce the allowance by 1*s.* for each "lodger; this has the effect of discouraging them from "crowding their houses with lodgers."

77. *Mr. Chas. Rogers*, R. O., Newbury Union, "There are a good many cottages with one bedroom and "by no means good in Leckhampstead. Throughout "the Union very few of the landowners' cottages are "bad; the bad ones belong chiefly to small proprietors "or to the occupiers themselves."

78. *Mr. Latimer Harper*, R. O., Hungerford Union, "Many of the labourers in my district belong to benefit "clubs, some held at public houses and some at schools, "and I sometimes wonder how they can afford it. "I don't think they could afford at their wages to keep "their children longer at school than they do now. "As a general rule the parents don't care much about "education, but they are improving in that respect. "My districts includes some parishes of Wilts and "daymen generally receive 9*s.* a week just now; "some men have 10*s.* where they have to go farther "to their work. The guardians withdraw relief from "widows' sons after they are 10 years of age, and "the same is done in Newbury union; relief is also "withdrawn in the case of boys under 10 who are "actually at work. The parishes in Berks in which "the wages are 9*s.* a week are Lambourne, East "Garston, East and West Shefford. Women of all "kinds are paid 8*d.* a day."

SCHOOL TEACHERS' EVIDENCE.

79. *Mr. Ingram*, West Hendred, 13 years certificated teacher. "If we could have the children in regular "attendance up to 10½ years of age their education "would be sufficiently advanced for all ordinary pur-"poses. I don't think any of the Factory Act modes "of interference could be put in practice with advan-"tage here, our great difficulty is irregular atten-"dance; the age at which children leave school also "is dropping, boys of 10 or 11 now do the work "which used to be done by those of 13 or 14 years "of age."

80. Extract from return made by *T. L. Goodlake, Esq.*, chairman of Faringdon Union.

Boys from 10 years of age are employed principally in bird keeping and driving horses; after 12 years they are employed all the year round.

Girls begin field labour about fifteen, they greatly prefer it to domestic service. They work about 9 hours per day; they are engaged in all the lighter kinds of husbandry, the labour is far from hard.

Female labour is abundantly used. It is popular with employers from the fact that two women can do more work at a less cost than one man; women earning from 4*s.* to 4*s.* 6*d.* a week, a man earning 10*s.* to 11*s.* In clearing land and preparing roots for cattle the women excel the men.

The age on which it is desirable to place any restriction as to working on the land depends so much on the physical constitution of the lads, that I think the cases of individuals should be left to their own merits.

I regard the employment of females, especially the young, in field labour as an unmixed evil.

"Our villages are well provided with day and Sunday schools. Night schools have very recently become popular; indeed, in their case the demand has stimulated the supply. The mothers keep the elder children at home whilst they themselves go to field work; and when with large families complain of the impossibility of finding the weekly pence. The mothers appreciate infant schools as a compromise, which enables them to work whilst the little ones are cored for. In Buckland, Coleshill, Shrivenham, and Bourton, the cottages are exceedingly good; in the remaining 27 parishes of this union they vary from indifferent to very bad, many are mere hovels. In the larger parishes there are many small proprietors whose speculations in cottages cause great evils. In comparison with others they are very highly rented. The habit of taking the rent weekly operates hardly against the tenant, indeed a moiety of our paupers' out-relief goes at once into the pockets of these needy

owners. In number the cottages are equal to the supply of the labour required in the district. Labourers' dwellings are generally conveniently situated in respect to their work. Overcrowding is very common. I fear school and church are utterly powerless in the presence of the complete disregard of decency to which the poor are exposed; indeed the practice of modesty in the case of females is scarcely practicable. Where a third sleeping room is provided it is usually let if the poor are left to themselves. This is prevented in the case of villages belonging to single owners. In the four parishes I have named there is nothing to be desired in the way of water or ventilation; the remaining parishes vary in supply of water, and as to ventilation from indifferent to very bad. The cottages for the most part have small gardens attached, but in the towns of Faringdon and *Lechlade*, and in a less degree the large village of Stamford, the speculation houses to which I have before alluded have frequently no land attached to them. I should like to add that, in my opinion, the provisions of the Common Lodging-houses Act might advantageously be applied to the best interests of the poor by compelling all houses under 6*l*. a year rental to come within its ambit. The question of cottage rents, and consequently of good or bad accommodation, is purely a question of wages. So long as the price of labour remains at its present figure in this district it is impossible for the tenants to pay more rent, and the rent they pay is barely sufficient to keep the houses in habitable repair. The erection of proper cottages is simply a luxury in which the more wealthy alone can indulge, the capital sunk in their erection being completely unremunerative. Far otherwise is the case of cottages in the small towns; the poor flock to them, as the necessaries of life are cheaper than in the villages, this enables them to pay double the rent, and as the houses are run up with the sole object of a quick return of the capital invested, every thing that can conduce to the comfort and health of the inmates is simply ignored. Marked have been the benefits of the Nuisances Removal Acts, which the guardians of this union, encouraged by the magistrates, have carried out to the utmost of their power. The ever presence of fever I attribute chiefly to the filthy habits of the poor themselves; their disregard and dislike of cleanliness is inconceivable. Again, their treatment of good cottages offers but a sorry stimulant for supplying them with such. The multiplication of low beerhouses beyond the control of the justices aggravates the social condition of our poor. I almost despair of any improvement till beer and spirits are sold across the counter like any other necessary of life.

The system of hiring women at statute fairs I cannot sufficiently condemn. It is a custom utterly unknown in many parts of England, and therefore cannot logically be pleaded as essential to agriculture here. After 18 years of petty sessional experience, I have come to regard the annual hiring of women as a fruitful source of bastardy applications, and of immuring able-bodied women with their children in workhouses.

81. Extract of Return made by J. S. Bowles, Esq., J.P., Chairman of Abingdon Union.

"Boys are employed at all times of the year, beginning at 10 years, but no large proportion of them are so young as 10. Girls are seldom employed, and when employed it is for the purpose of keeping birds off newly sown corn; they are employed from the age of 11 to 14.

"Women are employed in bean planting, picking weeds, haymaking, and harvesting. I do not think that boys should be employed to work on the land before the age of 11. I think the employment of unmarried women in the fields is decidedly objectionable, it makes them rough handed and rough tongued, and gives them a distaste for household discipline and confinement. The employment of married women, except in haymaking and harvest, tends to the neglect of their homes and small children.

"Most (if not all) of the parishes in this union are provided with schools, and the children for the most part take advantage of them.

"The cottages are neither better nor worse than those of other rural districts in England; they are overcrowded, ill ventilated, with an uncertain supply of water. All the cottages have not good gardens. There is a fair supply of allotment patches."

82. Extract from Return made by Rev. T. Stevens, Chairman of Bradfield Union.

"Boys are employed in agriculture all the year round (perhaps not always continuously) from eight years of age.

"Girls from 16 and upwards are employed in weeding, haymaking, and harvesting.

"Women are very generally employed at the same work as girls and at manure spreading, thrashing, and root cleaning.

"There are schools in every parish; a good many take advantage of them. There is an increasing desire for education among the poor."

83. Extract of Return made by H. R. Eyre, Esq., J.P., Chairman of Newbury Union.

"Boys are employed here from the age of nine at all times of the year.

"Girls are employed here in field work, but not universally, and from the age of 16 to 20.

"Women are not employed to a great extent except in places where there is root stripping.

"It is desirable to place a restriction on the age at which boys should be permitted to work on the land; for the boys' sake physically boys of tender years, that is under 10 years of age, should not be exposed to much out-of-door work. It is desirable on every account to restrict the employment of females in field work, and particularly of girls under 16 years of age.

"Means of education are universally provided, and advantage is generally taken of it in this union.

"The condition of cottages is very unequal, and a large proportion belong to other persons than landowners. Some instances of overcrowding have been brought to my notice, and overcrowding in every case tends to immorality and evil results. Water is not probably deficient, but in small and confined and contracted dwellings occupied by families, ventilation must generally be defective.

"Good gardens and allotments are general, but not universal; they are indeed scarce in some places, in the suburbs of Newbury and the neighbouring villages."

Extracts from a Return made by G. C. Cherry, Esq., Vice-Chairman of Quarter Sessions and Chairman of Hungerford Union, referring to the Union of Hungerford.

"The acreage and population of Hungerford Union is as follows:—

	Acres.	Pop.
In Wiltshire	52,047	9,936
„ Berkshire	44,014	9,721
„ Hampshire	2,226	225
	98,287	19,882

"Means for elementary education are generally provided. In many parishes there are both day and night schools, in some only day schools. They are attended much better than was the case a few years years back, and gradually the indifference of this class as to the education of their children is passing away. I cannot attribute the non-attendance to any other causes than indifference and early labour. The condition of many cottages in most parishes of this union is bad. Improvements in this respect are taking place. Many are overcrowded, whence must arise evil results to morality, although I cannot quote instances wherein such results have been traceable to

Berkshire.

Mr. Culley.

C.
j.

this cause alone. I have been struck by finding that in the census returns for 1861 there are shown to have been in that year one inhabited house on an average for every 4·68 persons in this union, and one inhabited house on an average for every 23·13 acres. These figures do not tell of a deficient number of cottages, and if they are correct there need not be much overcrowding. Yet there is overcrowding. The supply of water is generally good. Ventilation is little attended to in the larger villages and small towns of this union. I beg to refer to my answer for Kintbury parish, which presents a fair sample of the union. It is in the larger villages and small towns that the cottages are worst supplied with gardens or allotments. In such places garden ground commands a high rent."

NEWBURY FARMERS' CLUB.

84. Resolutions passed at a Meeting held on the 27th of February 1868.

"1. That this meeting views with alarm a Bill which was introduced into Parliament last session entitled 'Mr. Foster's Education of Poor Bill,' together with the amendments to be proposed by Mr. Bazley for compulsory education, and deprecates any measure which countenances an education rate.

"2. That the members now in attendance at the meeting pledge themselves to promote the principle of voluntary aid (as at present in operation) in support of schools for the working classes, and promise to do their utmost in obtaining additional subscriptions ie order to render the said schools efficient.

"3. That this meeting discountenances all efforts which have for their object the exclusion of religious teaching from our parish schools.

"4. That no boy should be employed in farming operations before the age of 9, unless he had previously learned to read."

85. Extract from a Letter from J. Walter, Esq., M.P., to Geo. Culley, Esq., on the beerhouse difficulty.

"Instead of placing the licences in the hands of the magistrates, who would be apt to exercise the power capriciously and sometimes unjustly, I would allow everybody to sell beer *not* to be drunk on the premises, and give the magistrate ample power to take away the licence in case of its being abused. People must have beer, but there is no occasion for them to meet and drink together in beerhouses—there is the evil. If they want to meet together for convivial purposes, which they must be allowed to do occasionally as well as their betters, then let them go to the public-house, which I agree should be licensed by the magistrates as at present."

86. Letter from H. Tucker, Esq., High Sheriff of Berks, to G. Culley, Esq.

Bourton House, Shrivenham,

DEAR SIR, Jan. 30, 1869.

IN 1859 I obtained at my own cost a return of all the cottages in the Faringdon Union, showing the number of rooms in each, and the number, ages, and sexes of their inhabitants. From these returns I sent a digest to "The Times," which was published and produced a great sensation at the time.

I urged several members of Parliament to bring the matter before the House of Commons, with a view to obtain a similar return for the whole of England, believing, as I still do, that there is no other way of getting at the real state of misery and degradation in which a large proportion of our agricultural labourers and artizans are housed, and this opinion is confirmed by all that has been done by Government, and is still being done, to obtain information upon this subject. The means adopted can never secure the desired end.

I am, dear Sir, yours truly,

HENRY TUCKER.

87. The following paragraphs are extracted from a pamphlet entitled "The Sanitary Improvement of "Labourers' Cottages and Villages," just published by Mr. William Menzies, Deputy Surveyor of Windsor Forest and Parks :—

I am unwilling to join in much that has been written to show that the agricultural labourer has not the same position either in independence or comfort as he had in some previous times of this country's history. On the contrary, I believe they have been as a body gradually advancing from the earliest times. The amount of wages they receive, and a comparison of the prices at which articles of food and clothing could be purchased at different periods, do not afford so sure a test as is supplied by the average duration of life of the whole body of the people. . . .

It would, I believe, be generally admitted that the life of all classes has constantly been lengthening, and this could only arise from the whole community possessing more comforts in the shape of house accommodation, better food, more skilful medical attendance, better provision in the shape of hospitals, unions, and asylums ; all of which institutions are supported, some by voluntary contribution of the richer classes, and some by rates upon all descriptions of property. These institutions extend their benefits to all the lowest classes of society, and might safely therefore be reckoned as wages. . . .

It is quite evident to every one that much of the unhealthiness and immorality, both in cottages and villages, arises from the bad condition of the dwelling-houses of the labouring classes, and as the effects of these evils fall upon the community generally, the Legislature is entitled to deal with the matter. . . .

It is quite evident also to every one that the effect of the Union Chargeability Act, passed for England in 1865, will be in time largely to increase the building and maintaining of cottages upon landed estates in the rural districts, so that the labourers necessary for these estates may be nearer their work than they have hitherto been. Speaking more particularly of agricultural labourers, it is a common calculation among themselves that every hour they can save in travelling to and from their work is worth 3*d.* to them, and directly or indirectly it is worth about as much to their masters. . . .

With respect to the number of dwellings in country districts, it would appear to be impossible to introduce a Bill compelling landowners to build so many cottages in proportion to their estate. Arable land is changed to pasture or to building ground, while clay land and light farming land require a different number of men and horses, so that in fact no rule could scarcely be fixed as to the number that would be required ; but, subject to such special cases as I shall subsequently specify, I think the building of a sufficient number of cottages for their labourers may safely be left to the certain effect of landlords finding it their interest to do so, and they are becoming every day more convinced. . . .

The general care of the health of a rural district is left by the vestry of each parish to an inspector of nuisances.

It would be difficult to conceive a more inefficient body of men. . . .

Villages of small houses, and indeed towns as well, spring up in the country districts very generally, and especially in England, where water can be found in the subsoil within twenty-five feet, that being the lift of an ordinary pump, or what can be reached by a well pole.

The soil and subsoil are therefore naturally porous, and the danger is increased by the water underneath being almost always "travelling" water; that is, water passing from a higher level, however slowly, to some natural outlet. This has been thoroughly investigated and established by Pettin-Koffer, the German physiologist, in his researches on the causes of the cholera at Munich, in 1865. The wells thus draw from a large area, and if the cesspools or privies leak into the soil, as they almost always do, epidemics are thereby disseminated through the whole population, especially towards the end of the summer and in dry seasons.

I think it would be found upon investigation that epidemics of the class of fever and cholera spread in country villages in proportion to the number of the houses upon the ground, and the nearness to the surface of the water in the wells. . . .

A very large number of landlords have for many years been acting on the right principle of considering good cottages on their estates to be as necessary as farm buildings, and I do not think that I have stated anything as essential which they as a body have not been providing already; especially those who have been engaged upon it for some time, and have given their attention to the subject.

Perhaps also the Government might advance money on especially favourable terms to those who were inclined to undertake the building of cottages and dwellings which come up to the requirements of the description I have attempted to specify; or, still further, in cases where, upon full investigation by one of the inspectors, it was evident that, owing to the increase of population, the pulling down of houses, or some causes of this description, there were not sufficient houses for the labouring classes, the Home Office might grant powers under some very stringent conditions to the local authority to compulsorily purchase land in that parish or union, build a certain number of cottages, and charge the union or parish with the full interest. . . .

As the law stands at present, it is the duty of no one specifically to interfere with these matters, and say where they are wrong; but, however difficult and formidable a work it is, every one who sees the effects is, I believe, convinced that some change for the better must be attempted.

Crime in every form would, I believe, decrease, and so would the poor rates in the long run, whilst the lowest class would be raised from their present condition, and be saved much suffering and misery.

88. The following paragraphs are extracted from a pamphlet entitled "A Voice from Berkshire," addressed to landowners by Mr. H. R. Eyre, chairman of the Newbury Board of Guardians, published Sept. 17th, 1866:—

". . . . . Some general and extensive plan of housing the labouring poor must be devised, and the private rights of landowners must not be an obstruction to it—some plan which shall not depend upon the indulgence, or the accidental benevolence and liberality of individuals—some plan which shall recognize the personal liability of proprietors of all classes for the state and condition of their house property.

". . . . . Let us urge upon the Government and our Legislators to take Parliamentary action in the business and duty of housing the people, that the resistance of ignorance, indifference, and self-interest may be overcome, and that the partial efforts which have already produced an instalment of what is due to the requirements of the people, may be aided and supplemented by a general movement in the same direction."

89. The following is extracted from an address to "the Tenant Farmers and Occupiers of Land in the "County of Berks" by Mr. H. R. Eyre, published on the 30th of October 1866:—

". . . . . Some say, indeed, that this matter (supply of proper cottage accommodation) is better left to the operation of the principles of political economy. I am surprised at the suggestion, and more surprised at the source of it, because it not only seems to ignore all moral and social duty in the matter, but it seems to ignore a fact which a little thought and a little enquiry would disclose, that the system of land tenure in this country, and the difficulties connected with the transfer of land render the principles of political economy practically inoperative. If it were not so, we should not now be deploring the want of cottages, we should not have to complain that the supply does not keep pace with the demand.

". . . . . One of my correspondent writes to me that the landowners are not to be made answerable for the state of the cottages; for the cottages are for the most part in the hands of speculators. It is true that the rural population are very much at the mercy of those who invest in cottages for profit, and that the cottages are, for the most part, what we should expect when they are built on the principle of getting the highest rent at the lowest cost.

"But is not this the consequence of the supineness and indifference of the landowner? And if the landowner will not build to the extent of meeting the wants of the rural population employed on his estate, is there any other means of providing the necessary dwellings except that which we know to be attended with every evil?

". . . . . In a return which I have of the number of cottages in the Newbury Union, it appears that of 2,155 cottages in the rural districts, 622 only are the property of the landowners, and as many of these 622 are occupied by gamekeepers, gardeners, and other servants of the landowners, the proportion of those occupied by the agricultural labourers is proportionately reduced.

"It is seen, then, from this return that the agricultural labouring population, by whose labour the land is cultivated, upon whose labour the profits of the farmer very much depend, and by whose labour, to a great extent, rents are realized, are not housed for the most part either at the cost or by the care of the landowner.

"How far the labourer is thereby aggrieved I shall not attempt to say; how far he is often injured and his strength impaired by being forced to live at a distance from his work, and in an inferior, confined, and ill-ventilated cottage, I do not undertake to say.

"But that these circumstances affect him adversely we must all see, as well as that they constitute a grievance to the tenant farmer, who is often unable to command good labour, and cannot exercise that control over his labourers which he ought to have.

"We are likely to be told that the Union Chargeability Act will effect much, as it has removed the inducement to exclude the labouring classes from our estates and parishes, but it does not operate to require the landowner to build cottages, and until he is moved to do this the evil must remain.

". . . . . The intention of this address is to exhibit the matter connected with labourers' dwellings in its real aspect, and to show what that system has produced which leaves things to settle themselves. It is not to excite public indignation against any, but only to unite all in one common work, that there may be no room for reviling the proprietary classes, or for charging them with the habit of ignoring or repudiating their duties and obligations.

"What, I would ask, has made the present but the past, and what is to make the future but the present? If we would not hand down to posterity an evil which we deplore ourselves; if we would not perpetuate a system which helps to corrupt and demoralize our people; if we would not forfeit the blessings we enjoy, we must at once put our hands to a work which will be twice blessed, blessed to him who engages in it, and to him who has the benefit of it.

"I am very well aware that there are landowners in Berkshire who have been long engaged in remedying the evil which is complained of, but the problem to be solved is not who is building and who is not building cottages, but how far the work ought to be optional and discretionary, whether any safeguard should be established against a public evil, partly arising from the right of ownership, and what security the tenant farmer and the people should have, that the agricultural labourers should be well and sufficiently housed.

". . . . . I propose, then, that we petition Parliament to promote by further public measures the necessary work of providing additional habitations and homes for the people, and to find a national remedy for a national grievance."

Berkshire.

Mr. Culley.

C. j.

PAUPERISM.

90. STATEMENT of the Proportion of In-door and Out-door Paupers to the Population in the Unions of Berkshire. Giving the Population and Acreage of the Unions and Number of Acres per Head of the Population.

Union.	Population.	Acreage.	Acres per head of Population.	Proportion of Paupers to Population.
Newbury - -	19,999	42,956	2·14	1 in 13

BERKSHIRE EVIDENCE.

D.

APPENDIX D.

CONTAINING EVIDENCE ON LOANS CONTRACTED UNDER AUTHORITY OF INCLOSURE COMMISSIONERS, EVIDENCE ON PIECE WORK EARNINGS, AND OTHER EVIDENCE NOT PECULIAR TO THE COUNTY OF BERKS.

91. COST of LOANS contracted under the POWERS of the INCLOSURE COMMISSIONERS for the BUILDING and IMPROVEMENT of COTTAGES.

Showing the difference of the yearly charge which would be incurred for a loan of, say, 1,500*l.* for building 10 cottages under the rules of the Inclosure Commissioners when advanced by the Government at a charge of 3½ per cent, and when advanced by a public company (taking the Lands Improvement Company as an example) at 4½ per cent., adding in each case the yearly instalment necessary to repay the principal sum in the specified number of years.

The gross sum upon which the rent-charge would be calculated would in the case of an advance by Government be—

	£	s.	d.	£	s.	d.
Cost of cottages - -	1,500	0	0			
Inclosure Commissioners' charges 2¼ per cent. -	33	15	0	1,533	15	0

The gross sum upon which the rent-charge would be calculated in the case of the public company would be—

	£	s.	d.	£	s.	d.
Cost of cottages - -	1,500	0	0			
Inclosure Commissioner charges 2¼ per cent. -	33	15	0	1,608	15	4
Company's charge of 5 per cent. - -	75	0	0			

The difference in the amount of rent-charge for a loan repayable in 25 years (the longest term on which the land improvement company can advance money), 30, 35, and 40 years will be as follows.

Number of Years over which the Loan extends.	Government Loan, 1,533*l.* 15*s.*		Company's Loan, 1,608*l.* 15*s.*	
	Rent-charge.	Rate per cent. on 1,500*l.* expended in building.	Rent-charge.	Rate per cent. on 1,500*l.* expended in buildings.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
25 years - -	92 11 2	6 3 5	108 9 0	7 4 7
30 years - -	82 19 8	5 10 7¾	98 5 0	6 11 0
35 years - -	76 7 0	5 1 10	91 14 4	6 2 3
40 years - -	71 10 8	4 15 4	87 1 6	5 16 1

92. Extracts from a correspondence on the subject of loans for cottage building and improvement between Captain Dashwood, a director of the "Lands Improvement Company," and the Assistant Commissioner.

From Captain Dashwood, February 20th, 1869:—

"The old Government loan, now all expended, was at 3½ per cent. for 23 years. The Lands Improvement Company's loans are at 4½ per cent. for 25 years; the General Land Drainage Company's for 30 years at 4½ per cent.

"Say a cottage costs 150*l.*; under the Government loan the yearly charge paying interest and principal would be:—

	£	*s.*	*d.*
For 23 years at 3½ per cent. -	9	11	0
„ „ at 4 „ -	10	0	9
„ „ at 4¼ „ -	10	5	9
„ „ at 4½ „ -	10	10	9
The Lands Improvement Company's charge for 25 years at 4½ per cent. - - -	10	1	1½
General Land Drainage Company's charge for 30 years at 4½ per cent. - - -	9	3	1½
If the term by a new Act was extended to 35 years the companies' annual charges would be - -	8	5	1½

"Say an owner gets 1*s.* 6*d.* a week for a cottage (*i.e.* 3*l.* 18*s.* yearly), he will lose,—

	£	*s.*	*d.*
Under the 25 years' scale	6	3	1½
„ 30 „ -	5	5	1½
„ 35 „ -	4	7	1½

"So by being allowed 35 years instead of 25 he would lose less yearly by 1*l.* 16*s.* Question: whether this is worth amending the Act for? Though a landowner by building such cottages loses yearly say 6*l.*, the estate is clear at the end of 25 years, and is immediately benefited by having labour on the spot.

"Calculate the yearly loss at 5*l.* a cottage on 20 cottages; would it not be more advantage for an owner to pay 100*l.* a year for 25 years, or say his life, than to attempt to erect the cottages of his own savings at a cost of 3,000*l.*?

"What a comfort to an owner to think that he had comfortably housed 20 families at a cost of 100*l.* a year, and at the same time improved his estate."

93. From Captain Dashwood, March 1st, 1869:—

"I may be wrong, but on working out the facts as to the rate of interest and the longer term of 35 years I think those landowners or agents who make difficulties on the score of expense have not well calculated the difference as to the value of an estate with the labour well and conveniently housed or the contrary.

"As to the rate of interest, 3½ per cent., we need not trouble ourselves, I fancy, as Government, after being obliged to charge the Inclosure Commissioner expenses, will never again be allowed by the country to lend on such easy terms as 3½ per cent.

"As to extending the term of years from 25 years to 35; considering that the insurance offices, as also the Inclosure Commissioner, are against such an arrangement, I do not think that point will ever be allowed, and when one finds that the extra charge is per cottage only 1*l.* 13*s.* 6*d.* yearly, or say 7½*d.* per week, I cannot deem such an increase of charge to be any real obstacle to cottage building to any owner, especially when he considers the charge is all paid off at the expiration of 25 years.

94. Mr. Culley, March 8, 1869, to Capt. Dashwood.

. . . "As to borrowing money at 7 per cent. for cottage building, if it was only a question of 'cottages 'or no cottages,' or of 'cottages well placed instead 'of cottages very badly placed,' I would entirely go with you; but unhappily we have to persuade landowners to pull down wretched old cottages, for which they are now receiving as much rent as they could reasonably ask after expending 150*l.* each on new. In point of fact in many cases the first effect of such an operation would be the loss of 7 per cent. on the cost of each cottage, and all we can say (pecuniarily) as an inducement is, 'Your labour will be so much more 'valuable if you place these cottages more conveni-'ently for your farms; your labourers will be in every 'respect improved by being more decently housed; 'and you will escape the yearly tax of maintaining 'these ricketty old cottages.' It must therefore be our endeavour to reduce as low as possible the rate of interest to be paid on a loan contracted for such a purpose, and to extend the time as far as will practically reduce the yearly instalment in payment of principal, to put the life-renter for this purpose as nearly as possible in the position of an owner in fee."

95. Capt. Dashwood to Mr. Culley, March 16, 1869.

"I am still of opinion that the charges for building cottages, and the yearly loss between rent received from occupants and the interest paid for capital, are not sufficient to prevent owners embarking in such an improvement to their estates, though without doubt they afford the non-enterprising owner a good excuse."

EARNINGS AT PIECE WORK WAGES.

96. The following is an analysis of the earnings of mixed gangs of English and Irish drainers employed at piece work wages in the same fields in Northumberland on three estates, taken by the Assistant Commissioner from the pay sheets of Mr. Joseph Batty, superintendent of drainage works under Mr. G. A. Grey, land agent and inspector under the Inclosure Commissioners. The number of years each man had been at work as a drainer, the number of years each Irishman had been in England, and other remarks as to the ability of them, were given on the margin of each sheet by Mr. Batty.

The following is a correct statement of the earnings of a mixed gang of English and Irish drainers working together in the same fields in North Northumberland, at piece work wages, on Capt. Leyland's estate at Haggerston:—

Field 1. In 28 days—
11 Englishmen earned 43*l.* 6*s.* 4½*d.*
Average per man per day, 2*s.* 9¾*d.*
13 Irishmen earned 44*l.* 2*s.* 10½*d.*
Average per man per day, 2*s.* 5*d.* (rather over).

Field 2.
14 Englishmen earned 53*l.* 3*s.* 8*d.*
Average per man per day, 2*s.* 8½*d.* (rather over).
10 Irishmen earned 30*l.* 12*s.* 5½*d.*
Average per man per day, 2*s.* 2¼*d.*
Average earnings *per day*, taking both fields—
For 25 Englishmen, rather over 2*s.* 9*d.*
For 23 Irishmen, rather over 2*s.* 3¾*d.*

Of the 25 Englishmen 22 are described as having "drained for several years, constant at the work." Of the 23 Irishmen 15 are described as having been in England and drainers for several years, some of them for 15 years, none for less than six or seven years:—

Taking the earnings of these practised drainers only the case stands thus:—

	Per day.
The 22 practised English drainers earned an average of - -	2*s.* 9¾*d.* nearly.
The 15 practised Irish drainers earned an average of - -	2*s.* 7*d.* nearly.

Taking the case of the beginners only—

	Per day.
3 Englishmen average	2*s.* 4½*d.* nearly.
8 Irishmen „	1*s.* 10½*d.* nearly.

The highest individual earning—
By an Englishman is 3*s.* 8*d.* per day nearly.
By an Irishman is 3*s.* 6¾*d.* „ exactly.

Taking these gangs therefore as examples of the merits of the men as drainers—

An English beginner is worth 15*s.* 3*d.* per week.
An Irish „ „ 11*s.* 3*d.* „

After, say, 10 years' practice and better food, the account stands thus:—

The English drainer is worth 16*s.* 10½*d.* per week.
The Irish „ „ 15*s.* 6*d.* „

If this, then, be a fair example, as I have every reason to believe it is, good food and practice reduce the *difference* between the native Northumbrian and Irish settler from 4*s.* a week for beginners to 1*s.* 4½*d.* for drainers of about 10 years' standing.

Berkshire.

Mr. Culley.

D. j.

These earnings are very small for drainers in Northumberland, and Mr. Jos. Batty accounts for it by saying that there was no great demand for drainers at the time the fields were done, and that the men are below the average. He considers that a "real good "hand" ought to earn 4*s.* a day, and often does.

The following are two more instances of the earnings of mixed gangs in Northumberland :—

In a field on Lord Grey's estate at Ancroft nine Englishmen and two Irishmen earned 74*l.* 7*s.* 5*d.*

9 Englishmen averaged 3*s.* 2½*d.* per day, or 19*s.* 3*d.* per week.

2 Irishmen averaged 3*s.* 3½*d.* per week, or 19*s.* 9*d.* per week.

In a field on Mr. Culley's estate in Glendale, Northumberland—

12 Englishmen and 6 Irishmen earned 90*l.* 19*s.* in 31½ days.

12 Englishmen averaged 3*s.* 3½*d.* per day, or 19*s.* 9*d.* per week.

6 Irishmen averaged 3*s.* 0¾*d.* per day, or 18*s.* 4½*d.* per week.

This last gang is spoken of by Mr. Batty, the superintendent, as a fair average lot, both English and Irish (all practised drainers).

Highest earning of any one man of this gang, 3*s.* 7*d.* per day, nearly ; lowest, 3*s.* per day, nearly.

It will be seen that the difference between the earnings of the English and Irish drainers (all practised hands) in the last case is exactly the same (1*s.* 4½*d.* a week) as between the *practised* English and Irish drainers in the first case, none of the same men being employed in both cases. The earnings in the last case are, however, better, and more what they ought to be, where the farm labourer on a yearly hiring has 16*s.* a week in money or kind. The practice of these drainers is to work together in parties of two, or at most three, such parties being, in the cases taken, always composed of men of the same nationality ; in other respects they are entirely on an equality as to means of earning, the parties of two or three men taking each drain in succession as they finish that in which they have previously been working. It will be borne in mind that the English and Irish here compared are men probably of the finest class physically of their respective countries.—G.C.

Report on Beds.

97. Extract from a letter addressed to the Assistant Commissioner by Mr. Thomas Bennett, late land steward to the Duke of Bedford.

Park Farm Office, Woburn, Beds,
Oct. 26, 1868.

My dear Sir,—

Thanks for the perusal of your report, which I return by book post. . . . . I think you overlook the fact that where the Duke of Bedford, as landowner, is short of cottages, his estates are close to villages where our labourers reside, as Potsgrove, Ridgmont, Eversholt, Lidlington, that the landowner, if he erected all his land requires, has no power of pulling down or of restraining others in building ; hence the fostering of over populating districts, by inducing young persons to stay in their native place instead of looking for work in the more thinly populated districts, consequently when the least slackness of labour (as in this exceptional year) sets in, there is an immediate outcry of over population. The numbers out of work in the Ampthill and Woburn unions since harvest is something far beyond my experience since the days of the old Poor Law. Woburn Union has the work test going on, and ablebodied people are ordered to walk from Toddington to be at Woburn at 7.30 a.m., go to work to earn 1*s.* 6*d.*, and then walk home. At Ampthill there is a committee formed to assist emigrants. In every parish on the sand range of hills there are from 20 men and strong lads, and upwards, quite idle at present.

1. *Mr. George Russell*, county-court judge, says, "The agricultural labouring class pay better than any other class of debtors coming before me."

Many witnesses bore testimony to the fact that the agricultural labourers of Derbyshire live and treat their families in a better manner, and are less willing to throw themselves on the rates, than mining or manufacturing labourers earning much higher wages.

MEDICAL EVIDENCE FROM NORTH DERBYSHIRE.

2. Letter from Mr. E. M. Wrench, a surgeon in practice at Baslow, in Bakewell Union.

DEAR SIR,

IN reply to your letter of the 25th, I have much pleasure in giving you all the information in my power regarding the state of the agricultural labourer and his family in my part of Derbyshire, the more so as his state is most satisfactory. It is quite the exception for any children under 13 years of age to be employed, unless it be by their own parents, in driving the cows to water or milking; and it is almost unknown for a child to suffer from over work.

Women are employed a good deal for milking, but for nothing else.

Education is generally appreciated by the parents, and liberally supplied by the landlords, so that if a child at 13 is unable to read, it will usually be attributable to its own or its parent's vice, and not to its having been profitably employed.

The health of the agricultural labourer and his family is very good, and has much improved lately, from better cottage accommodation and water supply, though much remains to be done.

The Derbyshire neck is not nearly so common as it used to be. It is, as far as I can ascertain, after careful inquiry, attributable to defective nutriment, perhaps monotonous diet, and *not*, as is commonly supposed, to the limestone water or repeated intermarriage. The largest family of Cretins in this neighbourhood occurs in one where a very well-to-do farmer's daughter ran away with a labouring man, and where there was not the least consanguinity.

The food of the agricultural labourer has much improved since the introduction of railways, by the substitution of wheaten bread for oat cake. Milk, in the summer or cheese season, is very scarce, but at other times is pretty plentiful and easily procurable, with great advantage to the women and children.

It is the custom of some of the landlords, most especially his Grace the Duke of Devonshire, to allow the labourers to rent enough grass land to keep one or two cows, with the greatest advantage to the labourer, by aiding his wages (which average 14*s.* a week), and inducing thrift to his wife by affording her more employment, and to the children by providing them with milk for nearly half the year, when there is no cheesemaking.

The labourers form small clubs, each member of which has the milk of all their cows in turn, and by these means each family is able to make one or two good cheeses every week or ten days. The beneficial result of the labourer keeping his cow is wonderfully exemplified in the health of the children of Baslow, where, out of a population of over 900, the deaths under 10 years of age (including those who only lived a few hours from birth) has averaged less than three per annum for the last 10 years, or at the rate of 3·103 per 1,000.

I need scarcely say that this preservation of infant life would be our destruction were it not for the constant exodus of our young people to the neighbouring large towns for work, for which their good education and healthy frames eminently fit them.

The labourer's cow again being of use in affording a little capital to enable the parents to apprentice their children to lucrative trades, or to send them to the colonies, where their practical knowledge of cattle is most useful.

I am, &c.
E. M. WRENCH.

3. EXTRACT from a Return made by *Mr. C. Evans*, surgeon (in practice for 30 years in the neighbourhood of Bakewell). „

"Boys are not generally employed under 11 or 12 years of age, and these only few in number, and mostly in the course of the summer.

"Girls are not generally employed, and seldom under 14 years of age, assisting in haymaking and other light employment in the fields.

"Women are employed occasionally, but not to any extent.

"It is desirable to restrict the age of boys working on the land to 12, unless they go to school all the winter.

"I think it is not desirable to place restriction on the employment of females in agriculture, but they certainly should not be employed before they are 13 years of age.

"There are the National and private schools provided for the education of the labouring classes, and they take advantage of them. I attribute the children's non-attendance at school to their being employed too early in agriculture.

"The cottages are tolerably good, and sufficient in number for the supply of labour required. They are conveniently situated with regard to the farms, they have often two bedrooms, but in a few cases only one, where father, mother, children, and grandchildren sleep. Many of the cottages have gardens, or a little land near at hand.

"The health of the agricultural labouring population is better than those employed in factories.

"Miners have a little land, and are greatly benefited in health by working on it.

"Cases of 'Derbyshire neck' are diminishing, though still hanging about the district in which it used to prevail most."

4. Letter from *Mr. J. E. Walters*, surgeon, in practice for 44 years in the neighbourhood of Bakewell.

SIR, May 27, 1869.

IN answer to the questions which you have given me, I beg to state that, generally speaking, the children are very well cared for. They usually begin work from 10 to 14 years of age, and their field of labour at home.

The hours of work are from 8 a.m. to 6 p.m.; their health is generally good, and the state of their education tolerable; at any rate they have plenty of opportunity, as we have schools everywhere, and their attendance, as far as I know, is very good.

The women are usually employed during the hay and corn harvest, and some work in the seed times, but they have nothing to complain of, excepting sometimes a scarcity of work. You may, therefore, with great truth, report favourably as far as regards Bakewell and its immediate neighbourhood.

Yours, &c.
JAS. E. WALTERS.

5. EXTRACT from a letter from *Mr. Jos. Taylor*, surgeon.

"There are not, to my knowledge, any children employed in agriculture in this neighbourhood. The locality is chiefly manufacturing and mining, with a little agriculture on a small scale."

NORTH DERBYSHIRE.

6. EXTRACT from a Return by *Mr. R. Nesfield, J.P.*, agent to the Duke of Rutland.

"Boys are only partially employed in agriculture in my neighbourhood.

"Girls are only very partially employed, sometimes in weeding corn, which lasts only a short time. Women are only employed occasionally in weeding corn, haymaking, and at harvest time.

"The hours of work of women are from 8 a.m. to 6 p.m., with one hour at noon, and half an hour at 4 p.m.

"It is not desirable to place any restriction on the age at which boys should be permitted to work on the land in this neighbourhood.

"It is not desirable to place any restriction on the employment of females, as so few are employed.

"Cheap schools are provided within reach of the agricultural classes, and they take advantage of them to a great extent for their children.

"Cottages are generally good in this neighbourhood, and are sufficient for the supply of labour, and are for the most part conveniently situated in respect to the farms. They are not overcrowded, and are well supplied with water.

"On the Duke of Rutland's estates I try to keep the cottage rents at 1*s.* a week. Most labourers have a garden, and two small fields enough for two cows, one field to pasture, and one field to mow.

"Labourers' wages vary from 12*s.* to 15*s.* a week, with additions in haytime and harvest. In the neighbourhood of Ilkeston the Duke of Rutland gives allotments of a quarter of an acre, charging 80*s.* an acre for the land, including rates and taxes, and these are in great demand amongst the framework knitters and colliers.

BAKEWELL UNION.

Population, 31,378 - Acreage, 107,023.

7. Evidence of *Mr. H. P. Bagshawe*, relieving officer and occupier.

"More than three-fourths of the acreage is in permanent grass.

"Boys are rarely employed before they are 12 years old; they are then usually hired by the year, and live in the farmhouse. They work from 6 a.m. to 6 p.m., and are usually employed morning and evening in milking, and often loiter and play in the middle of the day.

"It is not necessary to restrict their employment, as they are almost useless in this neighbourhood until they are 12 or 13 years of age.

"Many of the parishes in the north district of Bakewell Union are provided with schools, where a number of children go free, and in most of the others the weekly charge does not exceed 2*d.* to 3*d.* The schools are tolerably well attended, most children remaining long enough to learn to read and write.

"There are plenty of cottages for labouring men in the neighbourhood, and rents are usually reasonable, say from 50*s.* to 70*s.* per annum; many of them, however, only contain one bedroom, and I have more than once met with cases of immorality which might be almost directly traced to this evil. They are well supplied with water, and the rooms, being a good size, are usually well ventilated.

"Labourer's wages average 2*s.* 6*d.* a day. An ordinary weekly wage for day work is 13*s.* to 13*s.* 6*d.* Such men in haytime and harvest (harvest is very short) have as much food and beer as they can consume; the meat and beer will be worth 6*s.* to 7*s.* a week. All unmarried and some married labourers are fed in the farmer's house, and have 8*s.* a week upstanding wage, and 12*s.* in haytime, occasionally 14*s.* Some labourers have in addition 300 or 400 yards of potato ground, and the leadage of coals from the pit. Coals are cheap, and a ton lasts about eight weeks, *i.e.*, about six weeks in winter, and 10 weeks in summer. Coals cost from 6*s.* to 6*s.* 6*d.* a ton at the pit, and with gates will cost the labourer from 7*s.* 6*d.* to 8*s.* 6*d.* where the farmer leads them; at the station they cost from 9*s.* to 10*s.* 6*d.* a ton. I pay a labourer as follows:—

"12*s.* 6*d.* a week wages; a quart of new milk per day, worth 2*d.*; a house and garden and manure; from 300 to 400 yards of potatoes; leadage of coals from the pit; about half food and beer in haytime. A good man can always get work. We still have a good many Irish in haytime and harvest.

"A great many more children are employed in the mines than in agriculture.

"The women grumble if you ask them to do a bit of haymaking."

8. RETURN for Bakewell Union sent by *Lord G. H. Cavendish, M.P.*, chairman of Board of Guardians.

"Very few boys are employed in agriculture.

"Girls are not employed.

"I have seldom seen women employed in the fields, except in making hay. Many of the labourers and miners occupy a field or two, and keep a cow, and at hay time the whole family, down to the youngest, are brought into the hay field.

"The children in the union workhouse are mostly the children of pauperized families, while others come from places where there was at one time considerable manufacturing prosperity (such as Cromford and Tideswell), where the cotton trade and handloom weaving were at one time prosperously carried on, but which are now much decayed. There are very seldom any able-bodied labourers or their children in the workhouse.

"The cottages vary very much in different parts of the union. The miners and labourers mostly live in villages, and probably prefer it to living in detached cottages. Generally the cottages are sufficient for the supply of the labour required, and in places where manufactures have decayed, there are many cottages which would be vacant as far as the demand for supply of labour is concerned, but from the comparative cheapness of rent they attract a poor population from other quarters.

"Some of the cottages in this village (Ashford) have good gardens, and there is a considerable allot-

Derbyshire.

Mr. Culley.

A.
j 2.

ment of land conveniently situated for the use of several of the villagers. There are also in the neighbourhood, both on the properties of the Duke of Devonshire and the Duke of Rutland, allotments of land, but I think in this district the better class of labourers look more to renting an acre or two of land to enable them to keep a cow, than they do to having a garden or allotment of garden ground. The union is chiefly pastoral, and in several villages the population are principally lead miners, who work the mines under the peculiar customs of the Derbyshire 'king field.' Many of the miners also occupy an acre or two of grass land."

9. Evidence of *Mr. Daniel Roberts*, bailiff to the Duke of Rutland.

"Women do no farm work now, not even in hay and corn harvest. Upwards of 20 years ago women were a good deal employed in twitching, cleaning turnips, and other light work; now, hay-tedding and mowing machines and reaping machines have entirely taken the place of female labour, and provided for an increasing deficiency of male labour in haytime and harvest. Formerly a great many Irish labourers came, but their number is greatly diminished; not one-half come now of the number who used formerly to come, and without mowing machines we should have a great difficulty to get through our hay cutting. Irish labourers who do come, come here for hay time, then go further south, where harvest is earlier, and come back for our late harvest, and then go to Lancashire for potato-picking.

"Labourer's wages vary from 2*s.* to 3*s.* a day. I employ about 20 men at from 2*s.* 4*d.* to 2*s.* 6*d.* a day, and in summer these men get from 5*s.* to 5*s.* 6*d.* an acre (without beer) hay cutting; reaping and setting up is done by the thrave of 12 sheaves (girth about 27 inches) at 5*d.* a thrave.

"I do not think wages have altered much for the last 40 years, but the labourers have fallen off in quality.

"An allotment of, say, six acres to keep two cows is not common. We have one or two such; they are apt to make the man neither labourer nor farmer, and make them more independent than the farmer likes. Some farms are as small as 40 acres, and there are cottage farms of 10, 15, and 20 acres.

"Our farms are increased as opportunity offers; small holdings are not desirable.

"Little cottage holdings on the edge of the moors have gradually been increased by the families holding them from 10 to 50 acres, the enclosing and improving being done by the occupiers, who hold at a nominal rent. The custom is to re-value these farms about every 15 or 20 years. Labourers, at 15*s.* and 14*s.* a week, making an allowance for loss of time by bad weather, will probably average for the year 1*s.* a week less."

10. Evidence of *Mr. E. Cunningham*, master of the Bakewell workhouse.—"I think it is very desirable that there should be some restriction on the employment of children in agriculture; the children of the poorer farmers are in a fully worse position than those of ordinary labourers."

Bakewell.

Population, 11,254 - Acreage, 43,020.

11. Evidence of *Mr. Wm. Greaves*, occupier.—"Boys are employed in agriculture from 13 years old the whole year round.

"No girls are employed.

"No women are employed.

"Men work from 6 a.m. to 6 p.m.; boys from 7 a.m. to 5 p.m.

"There are scarcely any cottages attached to the farms, the labourers living in the towns and villages; and in most cases they have to walk, on the average, two miles to and from their work. The cottages are generally good, and well supplied with water.

"In the villages small cottage allotments are general.

"The wages given to my labourers are 14*s.* a week the whole year; during hay and corn harvest they have 8*s.* extra, instead of beer, and this for one month certain for hay, and longer if the harvest is not over, and a month in corn harvest, longer if a slow harvest. Sometimes the corn cutting has been let to the men (chiefly oats), when they have brought their wives, and averaged about 10*s.* to 12*s.* per acre. We have a good supply of labour, and they are employed throughout the year. Our extra men are generally Irish; they have been in the habit of coming here early in June, and staying to assist in haymaking, which is of great extent here, and they remain till the end of July, when they have gone forward to the corn counties; but for the last three or four years they have not come as much as before, and in 1866 and 1867 we were much perplexed to get the grass cut and made, and mowing alone cost 6*s.* and in many cases 7*s.* and in some 8*s.* per statute acre. This has compelled us to have machines, and most farmers last year cut their grass by mowing machines. I believe we have not half so many Irish come now as formerly; emigration is one cause, and another cause is that many go direct to the corn counties by railways.

"I am proud to say I think no neighbourhood is better supplied with native labourers, and none where the labourers are more regularly employed; it is the exception when we have any able-bodied man in our union. The great drawback to the farmers generally is the want of cottages on their farms, and the rule is that the labourers live in the towns and villages, and, I should think, average two miles from their work; this tells on the men heavily, both in distance and the baneful effects of beer-houses. Were they lodged on the farm they would not have the opportunity, and in case of need be of greater use to their employers.

"The small cottages are generally well kept; and water is abundant.

"Women are not employed here; and boys not till they are 12 or 13 years old; they begin at 4*s.* a week, and get up to 8*s.* and 9*s.*; they also are allowed, in proportion to the men, extra wages in harvest time. Our labour is regular, as, owing to having so much grass land, cattle require in winter what the land does in summer, and consequently our men are employed all the year round."

11*a*. Evidence of *Mr. Young*, Ewe Close, occupier.—"Cowmen and shepherds have 16*s.* a week the year round. My moor shepherd has a cottage and six acres of good land, and pays 12*l.* a year to the Duke for it; my home shepherd rents a good cottage at 2*l.* 10*s.* a year. My ploughman's wage is worth about 17*s.* a week for the year. He has 14*s.* a week upstanding wage, a load of potatoes at Christmas, Lady-day, and when we take them up; at Christmas he gets 1*l.*, and the same at Lady-day for seed time; in harvest he has beer and one meal per day, and the same in hay time, and gets 2*l.* at harvest for extra hours.

"All my other labourers have 14*s.* a week at all times except harvest, when they take cutting corn and hay by the acre, and average about 1*l.* a week for eight weeks; they also take up turnips and potatoes by the piece. At Hassop Park (Colonel Leslie's) they take cows in for 21 weeks in summer, as at Chatsworth. If a labourer has not a cow he borrows one. All our men are in sick clubs, and most of the farmers subscribe to these clubs; there are also cow clubs, to which the members pay 2*s.* 6*d.* a year.

"We don't like paying men in kind in any way; if we kept cows for our men it would lead to pilfering.

"I have no farm servant in my house now; and a good many farmers have got rid of them.

"I am always trying to get my labourers to send their children to school, but it is very difficult; they don't understand the value of it, and I don't see what can be done without some form of compulsion."

11*b*. Evidence of *Mr. Lawrence Furniss*, occupier.—"I occupy 400 acres, of which 300 are grass. I board and lodge three men, to whom I pay an average of 16*l.* a year. A lad of 15 has 10*l.*

"I consider these men much better off than labourers living on their own account. Such men may save 10*l.* a year, and some of them do. A man has just left me who has saved 100*l.*; he is looking out for a farm.

"A dairy woman managing cheese making has 14*l.* a year; some have as much as 20*l.*

"The men we have in the house are cattle or horse men. When such a man is boarded out he gets from 8*s.* to 9*s.* for board. The men we keep are the best labourers, a good deal, because they are best fed.

"The labourers' cottages in the neighbourhood are very fairly good.

"Labourers who live at home have from 12*s.* to 14*s.* a week, but any good labourer can command 14*s.* As soon as we commence cutting hay it is customary now to pay 1*l.* a week, and give from two to three quarts of beer per day; this would last for four weeks; and there would be the same wage for four weeks in harvest on our farm.

"Labourers' wives seldom do farm work. On my farm they do not work either in hay time or harvest.

"All girls may go to service.

"A good strong boy of 12 gets 1*s.* a day.

"Men work from 6 a.m. to 6 p.m.; they breakfast at home, have a quarter of an hour at 10 o'clock, and dine from 12 to 1 o'clock, and when working long hours they have drinking time at 4 o'clock."

Baslow.

Population, 2,366 - Acreage, 5,450.

12. Evidence of *Mr. T. W. Gardom*, occupier.—"There are very few boys employed in agriculture in this parish under 12 years of age; they are generally employed in summer; some few all the year.

"The distance they have to go to their work is under a mile.

"Their hours of work are from 6 a.m. to 6 p.m. in summer, and from light to dark in winter.

"I would restrict the age at which boys should be permitted to work on the land to 12 years. There is a National school well attended.

"The cottages are good, and are let at a low rent; they are sufficient in number for the supply of labour required, well situated with respect to the farms, not overcrowded, well supplied with water, and well ventilated.

"All the cottages have good gardens.

"The wages of labourers are 14*s.* a week; they are hired by the week. Three of my best men have cottages on the farm free of charge."

Darley.

Population, 2,156 - Acreage, 7,104.

13. *Rev. D. Vawdrey*, rector and vice-chairman of Board of Guardians, says, "Boys are employed in agriculture from 7 or 8 years old upwards; they are employed from March till the end of September.

"No girls are employed on the land.

"No women are employed.

"They go from half a mile to two miles to their work.

"No restriction is desirable for any purposes except for *educational*. Their employment is very healthy. For the latter purpose, however, it is a question whether some restriction would not be advantageous.

"We have a boys' school, a girls' school, and an infant school, with a night school in the winter months. The education received is of a very imperfect and elementary kind, from the early age at which the children leave school and the desultory and intermittent attendance. The demand for labour is the chief cause of this, and to a certain extent the *distance* which the children have to walk to school, owing to the very scattered nature of the population.

"The cottages are substantial and not overcrowded; they are mostly very well supplied with water and well ventilated.

"Most of the cottages have small gardens, but very few allotments for other purposes, and especially for the keep of a cow; the withdrawal of this privilege, where it has existed, is, in my opinion, in the highest degree prejudicial to the labouring classes. The loss of the cow has entailed the loss of the pig, a scarcity of, and in many cases the entire deprivation of the first necessary of life for a young family, viz., milk. The labourer is a less important man in his own esteem, has lost his attachment for the old homestead and country, has become migratory in his desires, and seeks when he is able the little farm and its comforts in America, which he can no longer obtain in England. If he remains at home he gives to the alehouse the time he would otherwise have given to his croft and green crop. The habits of the wife and daughters are equally changed for the worse. They are become less domestic and (at least in *domestic* occupations) less industrious, as we all feel who have to employ servants.

"In this neighbourhood the contrast in the dress and character of those females who are thus associated with a little dairying on their own account from that of others with no such association is very striking.

"The cultivation of the parish is chiefly of a mineral nature; there is, however, a very extensive nursery, garden, in which a great number of boys are employed from spring till autumn. A considerable number of families are also supported by working in lead mines, and some by hand-loom weaving. There is also a large flax mill employing a many hands in the mill, and in dressing the flax, and there are extensive stone quarries and stone getters."

13*a*. Letter addressed to the Assistant Commissioner by the Rev. D. Vawdrey.

Darley Rectory, Matlock, Bath,
25th May.

Dear Sir,

My apology for addressing this communication to you is partly the fact that I happened to be the Chairman of the Board of Guardians at Bakewell when you addressed them yesterday, and partly the fact that the subjects you referred to were matters which have exercised my own thoughts for many years, as a resident in Derbyshire, and having superintendence (spiritual) over an important parish therein. As a body, the guardians of the Bakewell union are a remarkably shrewd and intelligent class of men, but few probably had directed their attention specially to or would feel able to answer off-hand the questions on which their opinion was asked, and any replies given under such circumstances would be crude and hasty. I think it right, however, that *some one* should undertake the responsibility of replying to you, and as I have been honoured with the confidence of the guardians on occasions of this kind for nearly 20 years, probably they would expect me to *try* at least to be the exponent of their views.

I have not your printed questions by me, but so far as I remember they related chiefly to the two points, 1, the general condition of the agricultural population in these parts, and 2, the degree to which they are educated.

As to the first, you were most correctly informed that their general condition is good, probably above the average of that of the general English labourer. There are, however, considerable exceptions to this rule, chiefly in districts where hand-loom weaving still prevails, a mode of living which those who have followed it still cling to with a most perverse tenacity, in spite of the depression and poverty which are associated with it. *Goitre* is an evil incident to this locality, so extensive and so mischievous that no report of the hilly districts of Derbyshire would be complete without some reference to it. There is a great deal of it in this parish. In one family six daughters were deaf and dumb, one son a maniac, and another imbecile. In another family four daughters were deaf and dumb. There are many other cases of imbecility and imperfect development, either of bodily or mental

Derbyshire.
Mr. Culley.
A.
j 2.

power or both, all in this parish. Yet this parish is well drained, has admirable water all flowing from gritstone, and is spread over a wide and very open valley. Goitre chiefly prevails among the aboriginal inhabitants. I know but of one instance where any strangers coming to live here (and there are many) have shown any symptoms of it. Among the aborigines the system of intermarrying has been carried on for generations to an extent which I never met with out of Derbyshire, and to this fact, more than to any other, I attribute the prevalence of this disease. Some years ago I obtained from all the medical officers of our union an opinion as to the possible and probable effect of administering to sickly children, at a certain age, in the spring of the year, port wine and quinine (especially if good milk were a constant part of their diet) in gradually eradicating the seeds of goitre. Their opinion was unanimous that the systematic adoption of such a course would *in time* be effectual. But then the poor could not be expected to buy such articles. The guardians should have the power and indeed be *required* to dispense them whenever their medical officers recommended them to be given. It would be a most economical policy to do so.

In connexion with this subject comes the labourers' cow and cottage allotments. I am sorry to see that modern notions of political economy are year by year causing these things to disappear amongst us. Twenty years ago there were few respectable labourers in this parish who had not their cow or cows. The wife and children mostly did the work required by them, and the husband gave his own labour to his employer. About 12 years since a large portion of the parish changed hands, and the first thing which the new owner did was to abolish the old system on his entire estate. I am sure that the change has been prejudicial in every way. These men (political economists I mean) are much influenced by the "reports of commissioners." Probably a report in favour of the old system might have some influence towards reviving it.

II. The question of education remains to be answered, and a most difficult one it is to answer. I have almost given it up in despair, so far as this parish is concerned, from the difficulties I have met with in obtaining results in any degree satisfactory. Every year, if occupation of any kind, at however trifling a remuneration, is to be obtained for children, they are taken away from school at ages still younger and younger. Twenty years ago we had at school a large class of boys and girls, all of whom were above 13 years old. Now there are few of either sex, especially in the summer time, older, if as old as 10. The boy at 6 nurses the baby or gathers manure, and the boy at 7 goes to the nursery garden to weed, and the instant the law permits them the rest are off to the flax mill at half time, in which condition their education is supposed to be provided for. But all the education which is here provided for such children is given by a very worthy, but very incompetent mother of a large family of children, a dependant of the mill owner. You intimated yesterday that a *thoroughly good* education offered would overcome all these difficulties. But a thoroughly good education is a very costly thing. The greater part of the property in this parish is owned by non-resident proprietors, most of whom contribute nothing towards the education of the poor. Ill paid as my teachers are, the deficiency in the funds of the school has (every year) varied from 10*l.* to 30*l.*, which has invariably fallen on myself. If 50 or 60 boys attend during the winter months, from March to the end of September the number is reduced to about 20. The mill, extensive nursery gardens, and our chief proprietors' farming operations call them off, and a really good schoolmaster will not occupy a post where attendance is so irregular and his work so little appreciated. That the parents should not send a child to school where it could earn 3*s.* a week out of school is not to be wondered at. Its education would cost the parent practically in that case 3*s.* 3*d.* a week. But the question is, if education *is* to be given at all, how it is to be given. Certain things seem to me to be absolutely necessary. 1. A school rate, to be paid by the *owners* and not the *tenants*. 2. One-half the cost of the school, &c. to be paid by government, to give them the right of interference and inspection. 3. Making it obligatory on mill owners to send their children to the school which has *a certificated* master or mistress, if there be such a one in the parish, and not as here, to a dame school. (This would make a vast difference to us here, not only in the number of our scholars, but also in our funds.) 4. Prohibiting the hire of any child *unless certified by the inspector as able at least to read moderately, and perhaps to write moderately* under a certain age, say 9; and this certificate to hold only on condition of a certain amount of attendance *subsequently*, either at night school, or in the winter months, until 12 or 13, unless the inspector should certify sooner that the child's education were sufficient. 5. The giving to every child properly educated under the hand of the inspector, and in some conspicuous and attractive shape, say an emblazoned card or certificate, that its education had been brought up to the government standard. Trifling as such a thing may seem, I believe that the holders of such a certificate would attach great importance to it, would feel themselves, and be felt by their neighbours, to be superior personages. 6. Where parishes are small in area and population, to consolidate them for educational purposes. Instead of a number of inefficient schools, as at present, we should have fewer, but all good ones, by such an arrangement.

I have just dotted down a few thoughts on the very important subjects concerning which you requested information. If there is any further point on which I can give you the least assistance I shall be glad to do so. I am, &c.

D. Vawdrey.

You will understand that the above statement has never been communicated to the Board, probably many of the guardians would agree with me, and some would differ from me. But such as the opinions are, I am alone responsible for them.

Edensor.

Population, 592 - Acreage, 4,829.

14. *Mr. J. G. Cottingham, J.P.*, agent to the Duke of Devonshire, says, "There are some boys employed in agriculture in this neighbourhood.

"No girls are employed.

"Women are only employed in hay time or on land belonging to their cottages.

"Women and boys work from 8 a.m. to 6 p.m.

"Boys should not work out until they are 12 years old.

"I think it desirable to restrict the employment of females to harvest work and weeding corn and turnips and dairy work.

"There are excellent schools for boys, girls, and infants, and they are well attended. The weekly payment is very moderate.

"The cottages are generally good, but this is an exceptional parish, as there are scarcely any purely agricultural labourers. The cottagers are chiefly employed as gardeners, grooms, woodmen, and gamekeepers for the Duke of Devonshire. The cottages are well ventilated and supplied with water, and are not overcrowded.

"The cottages have all gardens, and most of them have sufficient land to winter a cow, in summer they pasture their cows in Chatsworth Park, paying 3*l.* for the summer grass, about 21 weeks."

The following evidence on small holdings and cow allotments was also given by *Mr. Cottingham*.

14*a*. "I think that very small allotments are a mistake, and that a man with an allotment of, say, 10 acres, to keep a couple of cows, is better off than the holder of 20 or 30 acres or a farm just big enough to tempt him to do nothing else but work on his farm.

"I reduced one man to 10 acres from 20 to compel him to work, and he afterwards told me I had made a gentleman of him; he now works for the Duke of Devonshire at 14*s.* a week, and has his grass allotment of 10 acres. This system works well, bringing up a good class of labourers, and giving their wives an occupation at home."

14*b*. Extract from a Return by *Rev. J. Hall*, vicar.

"The circumstances of this parish are altogether exceptional. It is entirely the property of the Duke of Devonshire. The people are employed by him in various ways, and are well cared for in every respect. I am clearly of opinion that the small farmers, *i.e.*, persons holding from 30 to 60 acres of land, are as a class worse off in this neighbourhood than the labourers, who receive generally from 14*s.* to 18*s.* per week.

"On the other hand, where a labourer can have, as is common with us, just so much grass land as will enable him to keep one or two cows, which can be managed by his wife with scarcely any demand upon his own time, his position is undoubtedly much better than that of those to whom this privilege is denied.

"I am satisfied that these views are shared by nearly all who are acquainted with the district. The children are usually sent to school at 2 or 3 years of age, and seldom leave before they are 14."

14*c*. *Thos. Wilson*, labourer, Chatsworth, says, "Labourers under the duke have 14*s.* a week; farmers sometimes pay more, but the work is not so constant.

"I have eight acres of grass with my cottage, and I keep two cows. It takes about four acres to keep a cow, two to graze, and two to mow.

"The duke (Devonshire) allows labourers to put their cow in the park for 21 weeks, from May 15th to October 10th, at 3*l.*, and a great many do it. Women used to reap and such like, but they don't do it now, and you seldom see one in the fields; they look after their houses and their cows instead.

"There are two cow clubs about here for insuring the cows, we pay 2*s.* 6*d.* for each cow on entry, and 1*s.* a year after. Wages used to be 12*s.* a week here, but the duke has raised them to 14*s.* I think labourers are very comfortably off round here."

Hassop.

Population, 139 - Acreage, 1,129.

15. *Mr. J. Young*, agent to Colonel Leslie, says, "The cultivation is chiefly pastoral. The only ploughed land is a few acres, to give a little bedding for cattle and pigs in winter.

"Boys are employed from 10 years of age in milking cows and cleaning out their houses, also in weeding, making hay, and such like.

"Girls are not much employed in this parish in agricultural outdoor work, excepting in milking cows or where they are working for their parents, as many do, the holdings being very small, and the work done by the members of the family.

"Women are employed in the same manner as girls.

"The hours of work upon the land for men are 10 hours when for hire, but children principally work for their parents, and in that case their hours would be difficult to ascertain; the same with regard to women.

"I think it is scarcely necessary to restrict the age of boys, doing such work as they do here, unless they were compelled to attend a school instead of working. If this can be done I think a great blessing would be conferred on the rising generation.

"I think it is unnecessary to place any restriction on the employment of women in agriculture. Children should not be compelled to work before they are able, so as to retard and stint their physical development. I think they should be kept at school until they are 12 or 13 years of age. All persons are not equal in stature and strength at the same age, and should be treated accordingly.

"There is a school for boys and girls, where the ordinary branches of education are taught under a certificated master. The girls are taught knitting and sewing under a mistress. The charge is 2*d.* a week for young children, and 4*d.* for those further advanced. The children in the neighbourhood avail themselves of these schools. The master and mistress are both Roman Catholics. The schools are endowed by Colonel Leslie, and are under Government inspection. The capitation grant goes to pay the schoolmistress, who is the wife of the master.

"The cottages in the township of Hassop are good, although in the surrounding neighbourhood, such as Calver, Stoney Middleton, and other places, many of them are poor, chiefly in the occupation of miners, with a mixture of small farmers, or what may be called crofters. The women and girls chiefly work at the cotton mills in the neighbourhood, and the men at the mines and lime quarries. Those cottages which I describe as poor are neither well ventilated, lighted, nor well supplied with water, though it is only in a very dry time that they are short of water if they choose to carry it from the brook, or the well, or tap. I have not observed any evil results to morality directly chargeable to overcrowding.

"The wages of agricultural labourers will, I think, be fairly stated at 15*s.* a week; some are less than that sum, and some may have that and a cottage free. As a rule, they pay for their cottages.

"The cottagers usually eat wheaten bread, tea, and coffee, potatoes, butchers' meat as often as they can afford it, and puddings. I cannot call them a religious class, nor well educated.

"The mode of hiring men is chiefly by personal application on either side. Still there are hiring markets in various parts. There is a fair at Hope on the 13th May, where ploughmen are engaged by the year, and also female farm servants. Still they are subject to a month's notice, and can get off their engagement by a month's notice. Rate of wages for ploughmen I have already given. Female wages are about 10*l.* per year, but in large dairy farms a professional dairy maid will get 14*l.*, and some more. Labourers' wages are 2*s.* 6*d.* per day, though in summer good men get more, up to 18*s.*; still secondary men you may get for 15*s.* per week any time of the year.

"Custom of letting small holdings for sheep and cows is from year to year, subject to six months' notice. There are no letting of these small holdings by advertisement or submitting them to competition in any way. It soon becomes known where a vacancy is likely to take place, when an applicant goes to the agent and applies for the holding. They leave the question of rent entirely to the agent or landlord. This is the practice amongst small holdings, and to a considerable extent in large ones, and shows the amount of confidence the inhabitants of the High Peak have in the owners of the soil. His Grace the Duke of Devonshire is an extensive owner in the Peak, and possesses the entire confidence of the Peakerils.

"As ploughmen the High Peak men are not to be compared with the border men; but the Peak men can build a dry stone wall much better than a border man could. Border men are a better educated and more intelligent class, with far more mother wit and gumption about them, and what I would call a more religious class, especially north of the Tweed. Their families are in a corresponding position to their parents.

"There are plenty of schools about here, but there is not that earnestness among the parents and the parish ministers here that you find in the north. The cause of this lamentable fact ought to be sought out and cured, now that church questions are so much the rage of the hour.

"In the border counties women are extensively employed in agricultural labour. On a farm of 500 acres, where large quantities of turnips are grown, there will, at certain seasons, be found from 20 to 30 women workers, who work 10 hours per day, and formerly got 10*d.* per day, but now raised to 1*s.* In

Derbyshire.
Mr. Culley.
A.
j 2.

Yorkshire, Durham, and Northumberland, and north of the Tweed, women do most of the field work, excepting the ploughing and other horse labour, and indeed they do their share of driving horses. I saw, only a week ago, women driving horses in the roller in Berwickshire, preparing turnip land."

STONEY MIDDLETON.

Population, 608 - Acreage, 1,098.

16. Evidence of the *Lord Denman*, landowner and occupier.—"Many boys are employed at open air work, separating lead from that in which it is embedded, called buddling, from the ages of 12 to 18, at all times of the year, except during a hard frost. A few act as carters.

"Young persons earn from 5*s.* to 8*s.* per week, above ground and below.

"Girls are not employed.

"Women are employed in hoeing turnips and in haymaking.

"The workers (children, young persons, and women) all live in the parish, and have not far to come to their work.

"The hours of work are during daylight in winter, and 10 hours in summer.

"A schoolmaster who was nine years here told me that formerly children left school at 12 years of age, but in the Sunday school several now go on to near 18, and many of those and of the older labourers go to the night school to supply defects of which they are sensible.

"It is not desirable to place any restriction on the employment of females, as too little is done by women of all ages, the proportion of arable land being very small, and that not being very well weeded.

"In one instance a drunken mother prevents her children from being clothed well enough to be presentable at school.

"There are three schools; one a dame's school for very young boys and girls, the parish schools (day and Sunday) for boys and girls, and a Wesleyan school, rather on the decline, for boys and girls. The few Romanists attend chapel at Hassop, but as to their education it is separate from that of other children and young persons.

"There are no allotments. Several cottages have a small garden either near them or at a little distance. About 30 cows are agisted from 12th May to 11th October in pastures of owners and of occupiers, and occasionally an occupier or an owner allows a labourer to have a strip or two of potatoes on part of the land on which he is a labourer.

"Milk also is very cheap and good."

TIDESWELL.

Population, 3,512 - Acreage, 10,950.

17. COPY of a LETTER addressed to the Assistant Commissioner by the *Rev. Samuel Andrew*, vicar.

"DEAR SIR,

"OUR population is about equally divided into those engaged in mining, manufacturing, and agricultural labour.

"If any one of these employments predominates I have no doubt it will be the manufacturing class, children and women being less employed in mining and agriculture than in manufacturing.

"The means of education in this parish are now abundant. There is a free grammar school; we have also, at Tideswell, our National schools, connected with the parish church, under Government inspection, containing about 200 scholars, infants, boys, and girls. Her Majesty's inspector's last report, just received, states that the National schools are in a highly satisfactory condition. There is also a day school in a room under the Independent meeting house, containing about 70 children, boys and girls, average age 7. There is a school connected with Cressbrook Mills at Cressbrook, containing a similar number, average age 10. There is another school at Litton Mill, for the "half-timers" working at that mill.

I have just finished another commodious school for infants, boys, and girls (mixed) at Litton, a village of 400 to 500 inhabitants in this parish.

"At Wormhill there is a school for that district.

"The farms in this parish are managed, for the most part, by the families of the small freehold and tenant farmers who hold them, so that any legislation on the employment of women and young persons in agriculture will very slightly affect this parish.

"I am, dear Sir,

"Yours faithfully,

"SAML. ANDREW."

CHAPEL-EN-LE-FRITH UNION.

BUXTON.

18. Evidence of *Mr. Samuel Turner*, bailiff to the Duke of Devonshire.—"A great many men in this neighbourhood are employed in lime burning, which they do by the piece (so much per ton for burnt lime); these men earn from 2*s.* 9*d.* to 4*s.* a day when in full work. The coal for burning the lime is obtained in the district, and employs a good number of men, who get from 2*s.* 9*d.* to 3*s.* a day.

"Farms in this district are small, and few farmers keep more than one serving man, who is lodged and boarded in the house, and has from 16*l.* to 18*l.* a year, hired from Christmas at statute fairs.

"Most farms are within the compass of a farmer and his son. Where a farm servant does not lodge in the farmhouse he gets 10*s.* to 12*s.* a week and his meat. There are very few farm labourers who live in their own cottages and board themselves. Labour is in great demand, and wages are high in consequence. There is very little corn grown; some oats and turnips for their own consumption.

"We have a good many occupiers of a cottage and a few acres who keep one or two cows. These men are labourers as well, and are well off, fully as well off as a man who farms 30 acres and who is not a regular labourer. A man who occupies less than 100 acres has great difficulty to make a living, as land here is chiefly grazing land. Men who have no land can 'lay' a cow for 20 weeks in summer for 4*l.*; their difficulty is to get food in winter. Most cottages have a small shippon. We have a farm of 800 acres, which only requires a cowman and boy; about 50 acres only are arable, and the rest is used for summer lay for rearing young stock."

CHESTERFIELD UNION.

19. At a special meeting of the *Board of Guardians for Chesterfield Union* held on the 5th of June 1869, 31 out of 40 elected guardians being present, the following resolution was carried unanimously, viz.:—

"That, in the opinion of this Board, it is highly desirable that all children should be able to read and write before being employed in agriculture, and that if they are unable to do so they ought not to be so employed before 10 years of age."

20. Evidence of *Mr. M. F. Mills*, land agent, &c.—"The population of this district is so much employed in the collieries and mines that the information I can give you will not be of much value as bearing upon the points treated in your circular. Women rarely do any field work, and most of the boys work in the pits. It is a great favour to get a woman to come into a hay field. Harvest is got through by the aid of Irishmen; comparatively few Irish, however, come now to what used to come, and their absence causes a great demand for reaping machines. I don't suppose we have one Irishman now for six who used to come. Farms are small, and the ordinary labour is carried out by the family and servants who live in the houses of the occupiers.

"Agricultural labourers' cottages are above the average, and belong to the landowners, and are held directly from the landowners, except on large farms, where one or two cottages are let with the farm.

"The difficulty of letting cottages with the farms is that the farmers are induced to let them to colliers at a high rent, and trust to get their labour elsewhere.

"I have been at work building cottages for 30 years, and I cannot now build a sufficient cottage with three bedrooms under 120*l.*, and that only where bricks can be obtained at cost price, say 16*s.* per 1,000.

"A labourer is best placed where he has just sufficient land to keep a cow, and that we encourage. Where I can I give a man two or three acres to make hay of to keep his cow in winter, and provide a general cow pasture for summer at 3*l.* 10*s.* for 20 weeks (May 17th to October 10th). This works remarkably well, especially among mechanics. I think 20 poles quite sufficient for a spade-cultivated garden or allotment.

"The ordinary rate of wages is 15*s.* a week; unmarried men, hired by the year and living in the farmer's house, have from 10*l.* to 20*l.* and their food; 16*l.* would be about the average of full men. During the last 25 years wages have risen from 12*s.* to 15*s.* a week, in consequence of the demand for labour in the coal and iron mines. All labour, mining and agricultural, has risen about 30 per cent. during the last 25 years.

"The occupiers of farms under 100 acres on the coal-measures are no better off than labourers; few of them can read or write."

STAVELEY.

Population, 7,513 - Acreage, 10,442.

Cultivation about one-half arable.

21. *Mr. R. W. Crawshaw*, occupier and guardian.—"Boys are never employed in this district, viz., North Derbyshire, in agriculture under 12 or 13 years, and only in exceptional cases under 14 years.

"Girls are not employed.

"Women are not employed.

"The distances the children, young persons, and women go to their work are generally only short, and in most cases the labourers' cottages are built on the farms. This is particularly the case upon the Duke of Devonshire's estates, which comprise a great portion of this division of the county.

"The hours of work of men are from 6 a.m. to 6 p.m., allowing an hour for dinner and a quarter of an hour at 9 o'clock in the morning.

"It is certainly not desirable to place any restriction on the age at which boys should be permitted to work on the land in this district.

"There are very good schools for all parts of the parish, and all under Government inspection. Proportionately the schools are more appreciated and better attended by agricultural labourers and their children than by any other class of labourers.

"The condition of agricultural labourers' cottages is generally good; they are sufficient in number for the supply of the labour required; they are, as has been stated above, mostly well situated on or close to the farms, and as the rents are merely nominal, and in most cases the men are rent free, keeping lodgers is not allowed; consequently cottages are not overcrowded, and are generally large enough.

"All farm cottages have good gardens, and they are, as a rule, kept in very good order.

"I wish here to make a remark or two on the manner of hiring young farm servants at statute hiring places. I think it very prejudicial to their interests morally and in every way, and it is much to be desired that some other mode could be adopted. They are, as it were, apprenticed and kept tight all the year, then let loose without any control, young men and young women all congregated in public houses, and the result may be better imagined than described.

"Hired servants from 14 to 20 years of age get from 8*l.* to 20*l.* per annum. The rate of wages for day labourers is on an average 15*s.* per week, for horsekeepers, who have longer hours, 18*s.*, and a foreman makes about 1*l.* This is exclusive of any extras; they make in harvest about 40*s.* extra, and in piecework generally, such as hoeing turnips, &c., they make extra wages; they have also potatoes grown for their own consumption, the farmer finding land, manure, and labour, the man only seed, and coal carted free of charge."

21*a*. Evidence of *James Longmate* and *Samuel Broughton*, farm labourers.—"We have 16*s.* a week upstanding wage; we get no milk and have no cows. In harvest we get some extras, but not much. We pay 1*s.* a week rent for our cottages and gardens; they are very good cottages, and are let to us by the master; he has them with the farm."

(The perquisites which these men had in addition to the upstanding wage of 16*s.* were thus reckoned by the master:—

	£
Potatoes, three pecks planted, worth say -	2
Harvest, extra pay - - -	2

The cottages were very good, let by the landowner with the farm, and would, with the garden, command a rent of 2*s.* 6*d.* a week in Staveley parish, so that the labourers gain in that respect also.—G. C.)

21*b*. Evidence of *M. Higginbottom*, groom and farm labourer.—"I have 16*s.* a week and a cottage and garden; I buy milk from my master. I have one child, a girl of 15; she has been out at service for nearly two years; she began at 5*l.*, but I must get her raised to 7*l.*; it takes 7*l.* to keep her in clothes and shoes, and she's dressed nothing gaudy neither. She went to school till she went to service; she can read well, and write fairly. Children are kept longer at school now than when I was young."

21*c*. The *Rev. R. Roy* says, "I do *not* think it desirable to prevent boys working on the land at certain seasons and at certain kinds of work, *e.g.*, bird tenting, potato setting, turnip singling, harvest work, and potato getting.

We have an infants' school and mixed Church of England school, which are fairly taken advantage of.

Our difficulty is the indifference of parents to *insist* upon regularity of attendance.

21*d*. Register of the children of the agricultural labouring class attending school in the township of Haudley in the parish of Staveley, as given by the Rev. R. Roy:—

In Summer.

	On the Register.	In average Attendance.
Boys:		
Under 10 - -	8	7
Between 10 and 13 -	2	2
Girls:		
Under 10 - -	7	7
Between 10 and 13 -	8	7

In Winter.

Boys:		
Under 10 - -	8	8
Between 10 and 13 -	5	4
Girls:		
Under 10 - -	7	6
Between 10 and 13 -	8	6

MANSFIELD UNION.

AULT HUCKNALL.

Population, 686 - Acreage, 3,730.

22. Evidence of *Mr. J. J. Rowley*, occupier, author of the prize essay on "The Farming of Derbyshire," (see Royal Agricultural Society's Journal, 1853).—"Young boys from 9 to 12 years of age are employed

Derbyshire.
Mr. Culley.
A.
j 2.

a few weeks in spring and autumn in tending birds; wages from 6*d.* to 8*d.* per day.

"Girls are only employed during harvest.

"Women are employed only during harvest.

"There is a scarcity of cottages in my district; a rural population has not been encouraged, and a scarcity of hands in a busy season is the result. Teammen work from 6½ a.m. to 5 p.m. in summer; in winter from 8 a.m. to 4 p.m. without bait. In summer one hour and a half at noon is allowed for bait.

"I do not think it is desirable to place any restriction on the age at which boys should be permitted to work on the land. Boys under 13 are unfit for agricultural labour, they can only be useful in tending birds and leading horses in the harvest field; this is not to be called work.

"It is not desirable to place any restriction on the employment of females in this parish or district.

"There is an endowed school under good management. The advantage is accepted by the parents of young children; later on, poverty obliges the young persons to help in the family support.

"Very few cottages have been built in the parish by the owner. They are not conveniently situated for the labourers, who have to travel several miles to and from work. The cottages have good gardens near the dwelling, but no allotments.

"The wages of labourers are from 14*s.* to 16*s.* a week. Young men hired into the house will command, with board and lodging, from 8*l.* to 12*l.* and 16*l.* a year; they are engaged at statute fairs held in neighbouring towns.

"New milk is difficult to obtain by the labouring class, but they can generally get skim milk.

"The cultivation of the parish is mixed, but chiefly pastoral, the land of a medium quality. On the larger estates farms have been enlarged since the publication of my essay on 'The Farming of Derbyshire,' in 1853."

SOUTH DERBYSHIRE.

23. *Mr. John Shaw*, land surveyor, freeholder, and occupier, says, "South Derbyshire is in great part a pastoral district.

"Boys are to a limited extent employed from 10 to 11 years of age in light work during spring and summer, and as plough boys or farm servants from about 13 or 14.

"Girls are only employed as household servants, excepting sometimes in harvest; they go out to service early.

"Women are not generally or extensively employed, except in weeding corn in spring, and in harvest work in summer.

"The hours of work of women are from 8 a.m. to 5 p.m.

"I do not think any restriction on the age at which boys should be permitted to work on the land is necessary in South Derbyshire.

"No restriction is necessary on the employment of females in this division of the county.

"The means of education are National or parochial schools, and in a few instances endowed schools or private schools of landed proprietors. Advantage is *not* taken of these means to the extent which could be wished, although there is a general desire for the children to be 'taught.' This is not attributable, except in a comparatively small degree, to early labour or inability to pay, but I believe it arises from carelessness and negligence on the part of the parents, and in many cases, where it can be afforded, from an indisposition to pay the weekly pence. I know, however, of many instances where great anxiety exists to educate the children, and for which purposes great sacrifices are made. Sunday schools are generally well attended, but not much good is perceived where the children are neglected on week-days.

"Some of the cottages in South Derbyshire are very poor indeed, and in some places they are not sufficient for the supply of labour in the respective localities, nor are they conveniently situated. Some are also overcrowded, and evil results to morality have come under my notice in consequence. Within the last 20 years, however, very great improvements have been made in the cottages in this county, and on many large properties with which I am acquainted a very excellent state of things exist, cottages with all necessary conveniences having been erected, and good gardens having been provided. The allotment system has been also extensively introduced with advantage. There is a great desire generally to improve the condition of the labourer, which is being attended with gradual and perceptible good results."

"The mode of living, rate of wages and earnings, vary very much in different localities. In the neighbourhood of large towns and populous mining districts the wages of an agricultural labourer will be 15*s.* a week, with 'bargain' work in summer, when 18*s.* to 21*s.* will be earned. In some of the outlying districts a low rate of wages prevails of from 11*s.* to 13*s.* a week, with extras in summer, but generally in the purely agricultural districts 13*s.* or 14*s.* a week are the average rate of wages, with extra work and increased earnings in summer. In the first case the weekly earnings of a labourer and his wife and family will average 17*s.* to 18*s.* a week, in the second case about 13*s.*, and in the latter the average will be 15*s.* or 16*s.* a week. In the populous districts and near a town rents are from 2*s.* to 3*s.* a week, and in other districts 1*s.* 2*d.* to 1*s.* 10*d.* per week.

"The mode of living is generally bread and potatoes, with bacon and cheese, and I believe most families now manage to have a fair supply of butcher's meat."

Belper Union.

24. At a meeting of the *Board of Guardians for Belper Union*, held on the 5th of June 1869, at which the Assistant Commissioner was present by appointment, the following resolution was carried unanimously:—

"The guardians of the Belper Union do not consider it desirable to place any restriction on the age at which children should be permitted to work on land, inasmuch as children in this union are very seldom so employed under 12 years of age."

25. Evidence of *Mr. Robert Spendlove*, relieving officer.—"We have no inspectors of nuisances. Agricultural labourers in my district (Belper) average 10*s.* a week and their food. The farm labourers' cottages are generally fair, and mostly belong to the landowners."

26. Evidence of *Mr. John Bacon*, relieving officer.—"There is a good deal of mining in my district. A colliery labourer (who had gone to the colleries from other labour) would command from 2*s.* 6*d.* to 3*s.* a day. Farm labourers, as a rule, are better off and treat their families better than colliers; their wages are not so high, but they are more regular. Cottages in my district are fair, better in the country than in the towns."

Allestree.

Population, 529 - Acreage, 990.

27. Evidence of *Mr. T. W. Evans*, landowner. "No boys are employed on my farm; a very few are employed in the parish for bird tending in spring, and in August for harvest work. They are from 10 years old and upwards.

"No girls are employed.

"A few women are employed in harvest work, and perhaps two or three occasionally in spreading manure.

"The children, young persons, and women have never more than half a mile to go to their work.

"The hours of work are from 6 a.m. to 6 p.m.

"It is not desirable at Allestree to place any restriction on the age at which boys should be permitted to work on the land.

"It is not desirable to place any restriction on the employment of females.

"The means of education are amply sufficient.

"There are two schools under certificated teachers and a good Sunday school; nearly all the children are on the books, and they attend well.

"The cottages in my parish are many of them new and generally good. A few, however, are very bad. They are sufficient for the supply of labour required and conveniently situated with regard to the farms; they are not now overcrowded. The supply of water in the village is good. The good cottages are well ventilated. The situation of Allestree is healthy. The typhus fever is unknown there. All the cottages, with one or two exceptions, have gardens or allotments of land very conveniently situated. I ought to add that Allestree is within one mile of Darley Abbey, and within two miles of Derby, and that many of the inhabitants, especially women and young persons, work in the manufactories and other places. In consequence of this probably fewer than might otherwise be the case are employed in agriculture."

27*a*. Evidence of *Mr. E. Harrison*, land steward to T. W. Evans, Esq.—"The cultivation is chiefly for dairy purposes; not more than one-fifteenth part of the parish is arable.

"Very few boys are employed in agriculture, only about four or five; their ages vary from 12 to 14.

"Girls are not employed in agriculture, they go to the factory.

"A few women are engaged in hay harvest. There is a good school and the attendance is good, I should say.

"The greater part of the cottages are good, say two-thirds of them; there are a few belonging to small freeholders which are not good.

"Very few cottages are without either gardens or allotments.

"Labourers' wages are from 15*s*. to 16*s*. a week."

Hazelwood and Shottle.

Population, 819 - Acreage, 5,054.

28. The *Rev. J. H. Jenkins* says, "Our population was once slightly manufacturing; it is now, with the rarest exceptions, agricultural. Our quarries employ a few men in stone getting.

"Our agricultural labourers get from 14*s*. to 15*s*. a week, or live in farm houses and take home 7*s*. a week. Women are not employed in the fields. Very few children remain at school after they are 11 years old, consequently by the time they are men or women very few retain much of what they learned. The poor think little of education, and are unwilling to pay the small sum required of them, and on the smallest pretence keep their children at home.

"Our cottages are very bad, there is rarely more than one bedroom in them, in which adults and children crowd together. This is partly owing to the circumstance that they belong to small proprietors, who are desirous to get as much as possible at the least outlay. The farms in Hazelwood are small, the tenant farmers poor, consequently they avoid as much possible giving employment to labourers. In winter many are out of work, and they look to harvest as the time of compensation.

"Hazelwood men are celebrated as mowers; they have been known to travel to the south of London, working all the way.

"Unfavourable as this account is, nevertheless on the whole a great improvement has taken place amongst us; the people are better clad by far than formerly, and with sobriety we should be a very prosperous people. Almost every case of poverty is owing to intemperance and its consequent extravagance."

28*a*. Evidence of *Mr. Jos. Goodwin*, farmer.—"Labour can sometimes hardly be got for money in this neighbourhood; this year a man asked me 9*s*. an acre for hoeing beans, and I have had to pay 7*s*. 6*d*. When we can get hands we pay about 5*s*. 6*d*. an acre for hoeing wheat. I have 140 acres, of which 40 acres are arable; I only keep one man besides my son, and he's not a full man; he has 13*l*. and his keep, a full man would have 18*l*. We have no cottage attached to the farm." (These farm buildings are in a wretched state. The farm belongs to the trustees of some charity, and nothing is ever done by the landowners to improve the state of affairs.—G. C.)

Kedleston.

Population, 116 - Acreage, 950.

Cultivation chiefly pastoral, a small portion of green crops grown.

29. *Mr. John Coleman*, land steward to Lord Scarsdale and guardian, says, "Boys are very seldom employed in farm labour under 12 years of age.

"Girls are not employed on the land at any time except a few days hay-making.

"Women are sometimes employed, but not very much in the winter months, principally for hay-making in the summer.

"Labourers have to go from one to two miles to their work.

"Women work from 8 to 4 in winter and from 7 to 5 in summer.

"I would have no boy employed at a less age than 12 upon my farm.

"It is desirable to place a restriction upon the employment of females. Boys and girls should not be allowed to work in gangs together, and boys should be looked after by a man as ganger, and girls by a woman. I think the mixing of the sexes, particularly when some are known bad characters, is very injurious.

"There is a good school, which is well attended.

"In this parish the cottages are nearly all new and good, but in the district I must say they are bad and small, with very poor accommodation for the division of the sexes, and are ill ventilated; they are situated in villages, and the inhabitants have a long distance to go to their work; I cannot say anything in their favour, and as they are short in number in many districts, they are very much overcrowded.

"Most cottages have good gardens, and generally in this district allotments are provided in many places besides the gardens; they are situated as near the villages as practicable.

"The agricultural labourer in this district is in a different position to what he is in many others. The farms are small, and being mostly pastoral, the farmer keeps several men and lads in his house with him, and many farmers only employ extra labour during the busy or harvest portion of the year, and very much of the labour so employed is Irish. In consequence of mills (cotton), mines (lead), and the nearness to the town of Derby, with its immense railway works, almost all the likely young men of this district get to some other and more remunerative employment than agriculture, and I think that before many years are over we shall have a greater scarcity of labour than we now have. On account of the farms being small, and nearly all the farmers being *working men*, they do not employ so much labour as in many districts, and therefore the good labourer who depends upon agriculture entirely is not very plentiful with us. We know but little of the employment of children in the fields, for if the farming of the district is not up to such perfection as some others, I must say the working classes are very much more alive to the benefits of education than in other districts, where the farmer and his men are quite different classes, and not as here, the one in many instances sprung from the other; and it is the hope and struggle to get into a small farm that induces many a labouring man to keep his children at school when they might be pecuniarily benefiting him by work.

"I think there are many more inducements in this district for young men to get away from agricultural work, and therefore they are more careful about education.

"If boys are employed at a lower age than 12 they should be up to a certain standard of education, or should devote a portion of, say, the winter months to

Derbyshire.
Mr. Culley.
A.
j 2.

school. Boys who have to go a part of the day at a busy time of the year to school are of no use to the farmer, whose operations are carried on, as a whole generally, and therefore if the boys are absent the whole machine stops."

SHOTTLE.

Population, 427 - Acreage 3,741.

30. *Mr. T. Travis*, occupier, says, "Women and girls are only employed in the farmer's house.

"The labourers' cottages are very inconveniently placed for the use of my farm; I would give a good deal for two cottages attached to my farm.

"I have two young men, who lodge and board in the house, and three men, who get their food in my house and sleep at home; these last have 9*s.* a week except for 14 weeks in summer, when they have 13*s.* a week, their meat, and two quarts of beer per day. I consider the men's meat worth at least 7*s.* a week. A lad of 15 or 16 in my house has 8*l.* and his keep.

30*a*. Evidence of *Mr. Jos. Brookes*, bailiff to Mr. Smedley.—"We hire carters by the year from the 12th of May, and pay them 15*s.* a week, and give them a cottage free, say 16*s.* 6*d.* a week. Sometimes these men have piecework in harvest for a week or so; we have three such men.

"Able-bodied day labourers we pay 14*s.* a week in winter and 16*s.* a week in summer; in harvest they earn about 1*l.* a week for a month; we have 10 such men. An old man has 10*s.* and a boy of 15 has 9*s.* a week.

"We employ no women except occasionally weeding. Our carters live on the farm, and our horses rest two hours in the middle of the day."

SHARDLOW UNION.

ELVASTON.

Population, 500 - Acreage, 2,500.

Cultivation mixed, chiefly pasture.

31. Evidence of *Mr. G. Murray*, land agent, &c. "Boys are seldom employed in this parish under 12 years of age, and women are only employed for a few weeks in hay time.

"Boys make better labourers when early trained in habits of industry; they should begin work not later than when entering on their twelfth year.

"Elvaston parish contains only 600 acres of arable land, the remainder is rich grazing and dairy land, geologically known as the lower diluvian. The whole parish, with the exception of 40 acres, belongs to the Earl of Harrington.

"In this parish there are many cottage holdings of from three to ten acres in extent; this system of small holdings does not work well here, I think it is disadvantageous both to landlord and tenant; many of them are unable from want of capital to keep any stock, and they have been for years past dependent on the sale of hay to pay their rents; this continuous mowing without the application of manures has been gradually impoverishing the land. I have prepared an agreement which precludes them selling the hay from off the land. The labouring classes are all particularly well off, as there are magnificent charities belonging to the parish, amounting to 200*l.* a year, which is distributed amongst the cottagers of the parish. Since the present Earl of Harrington succeeded to the title and estates in 1866 great improvements have been effected, ten new cottages have been erected, and many of the old ones have undergone repairs, and yet there still remains much to be done. All the new cottages are of a superior class; they are mostly built in pairs, and contain living-room, kitchen with copper and sink, pantry and closet on the ground floor, with three separate bedrooms to each; they have each also coal-house tool-house, and watercloset at the back; the plans were all prepared in the office here and the work mostly done by the staff of men employed on the estate. We make our own bricks, purchase the timber at wholesale prices, and have saws and other machinery for converting it at the least cost, and yet we cannot do them at less than 220*l.* per pair; with the present mania for cheap cottages this is by many considered an extravagant price. Cottages can be erected at any price, and may have all necessary requirements to meet the wants demanded by the progress of the age, and yet fail on the score of economy. Each cottage here has a garden attached of from 10 to 15 poles; the rent of cottage and garden is 1*s.* per week. There are also allotments of 20 poles each, the rent of which is at the rate of 4½*d.* per pole; the allotments are as a rule well cultivated and clean, the only difficulty the tenant experiences is that of obtaining a sufficient quantity of manure to maintain the fertility of the soil under so scourging a system of cropping, and unless he can keep a pig or two, to consume the odds and ends and make some manure, the produce soon falls off. The Earl of Harrington is himself a large employer of labour, both in his extensive grounds at Elvaston Castle and likewise on his estate. The labourers employed in the gardens and grounds receive 14*s.* per week; in cases of temporary illness, where the labourer is not a member of a benefit society, he is paid half his weekly wages. There is an enrolled benefit society in an adjoining parish, to which most of the men belong, they pay 1*s.* 8*d.* per month. In case of illness they are attended by the club doctor, receive 10*s.* per week for the first six months, 5*s.* during the second six months, and 3*s.* 6*d.* per week for life if from accident or any other cause they are incapacitated for work. All drainage, road making, brick and tile making, and all estate improvements that admit of measurement or of being let by the piece is invariably done in that way; the men employed on such works earn from 18*s.* to 22*s.* per week. The day men commence work at 6 a.m. and leave off at 6 p.m., with one hour for breakfast and another for dinner, except on Fridays and Saturdays, when they leave off at 5 p.m.; they are all paid at the office at 5 o'clock on Fridays. There is a large schoolroom, with superior schoolmaster's house; the Earl of Harrington pays the master 45*l.* per year, and allows him house rent free with large garden; his Lordship likewise pays a girl 8*l.* per year to teach sewing. The school is now under Government inspection, last year the master received a grant of 23*l.*; the children each pay 1*d.* per week, which also goes to the master. There is likewise a night school during the winter months for those young persons who choose to avail themselves of it, and for which they pay 2*d.* per week for light, and on Sunday there are classes for religious instruction."

BURTON-ON-TRENT UNION.

Population, 41,059 - Acreage, 86,791.

Cultivation mixed, with a large proportion of pasture land.

32. Answer of the *Board of Guardians* to the questions contained in the Commissioners' circulars of inquiry given at a special meeting held on the 10th of June 1869.

"Boys are employed in spring and summer from about 12 or 13 years of age.

"Very few girls are employed in agriculture.

"Women are employed to a very moderate extent.

"It is not desirable to place any restriction on the age at which children should be permitted to work on the land.

"There are parochial schools in nearly every parish, and the children's attendance is not interfered with by early labour.

"Generally the cottages for labourers are of good quality and healthy; there are a very few exceptions.

"The cottages have generally fair-sized gardens, and in most instances there are allotments allowed to labourers by the principal owners of the parish."

33. Evidence of *Mr. John Shaw*, relieving officer, Repton District of Burton Union.

"My district is chiefly farmed for dairy purposes; the holdings are small, and the farmers' families often

work the farm within themselves; on the larger holdings more labour is employed.

"Young men are usually hired by the year, and live in the farmer's house; lads begin about 12, and get about 4*l.* a year; men get from 12*l.* to 16*l.*

"Married men, who are hired by the week and board at home, get about 14*s.* a week on an average for the year. In winter wages drop to 12*s.* a week, in hay time and harvest they rise to 15*s.* or 16*s.*, and in spring and autumn they vary from 13*s.* to 14*s.*

"Some weekly servants board in the farmer's house, and get about 8*s.* a week in winter, and 10*s.* a week in summer; the board is worth 5*s.* to 6*s.* a week, and the man himself is better off and better fed, but his family suffers, having only the 8*s.* or 10*s.* a week to live on.

"I think the labourers are pretty well off in this county, especially in the north of the county. The winter employment in Burton helps to keep wages up, especially for hired single men, and I don't think the beer allowance of the breweries does so much harm as is usually attributed to it. At the breweries they give labourers 13*s.* a week, and a quart to three pints of beer a day.

"The cottages in my district are moderately fair; nearly every cottage has an oven and boiler, and men working near home get a hot dinner; about half the cottagers keep pigs; and bacon is the chief animal food that is used. Farmers do not object to their labourers keeping pigs, formerly they used to allow them to keep cows in the lanes, now they will not; in each parish three or four cows used to be kept in the lanes.

"Women employed in farm houses as dairy women and living in the house have from 8*l.* to 14*l.* wages; some exceptionally good ones have 16*l.*"

Barton Blount.

Population, 73 - Acreage, 1,150.

34. Evidence of *Mr. F. Bradshaw, J.P.*, landowner. —"Boys are, I think, only employed in seed time as bird tenters; both boys and girls work on my farm and estate, but I think only in harvest on their parents' account; one lad is employed on my farm under the waggoner.

"Except as above, girls are not at all employed. Women are a good deal employed in harvest and in weeding.

"Children, women, and young persons go about half a mile to their work in my parish.

"Women come to their work at 8 a.m., and leave at 5 p.m., with an hour for dinner. Boys as bird tenters come early, and leave with the labourers about 6 p.m.

"As far as this immediate district is concerned, I should not think it desirable that any restriction should be placed on the age at which boys should be permitted to work on the land.

"This parish draws all its labour from the adjoining one of Church Broughton, where there are schools, and the parents are generally anxious to give their children what education they can.

"There are only a few cottages in Barton Blount, not sufficient for the supply of labour; what there are, are conveniently situated, well ventilated, and well supplied with water.

"All my cottages have good gardens, and I allow my regular labourers some potato ground on my own farms, though they do not live under me as tenants."

Church Broughton.

Population, 651 - Acreage, 2,272.

Cultivation mixed, chiefly pastoral.

35. *Mr. T. S. Radford*, occupier, says, "Boys are not generally employed in agriculture throughout the year before 13 or 14 years of age. Some few are employed occasionally in the spring and autumn frightening the birds off the corn under the above age.

"Girls are not employed in outdoor work; they are employed in household work from 13 to 18 years of age and older.

"Women are employed in the spring, summer, and autumn in light work, perhaps about one-third of the labourers' wives are thus employed. The labourers on my farm have a distance of 1½ miles to go to their work; some part of the labourers get a job when they can, viz., draining or other work at a distance from the parish.

"My men work from 5 a.m. till 6 p.m. in the spring, summer, and autumn months, in harvest they work longer in the evening, in the winter they work whilst it is light.

"I see no necessity to place any restriction on the age at which boys should be permitted to work on the land, as they are not required to work earlier than they are able, and they have a good school, which they attend until they are able to work.

"There is a free school for a certain number, about 20 I think, the remainder pay a trifling sum per week, from 1*d.* to 3*d.*, I believe; if one of a family, 3*d.*; if two, 2*d.*; if more, 1*d.* each. The school is generally taken advantage of.

"Some of the cottages are good, some moderate, some scarcely fit for habitation, they are quite sufficient for the labour required; some of them are very inconveniently situated with respect to the farms, mine for instance, all my labourers being 1½ miles from my farm. I do not know that they are overcrowded; they are well supplied with water; some of them are small and close, but mostly healthy.

"The cottages generally have gardens, and there is a quantity of land let in allotments, perhaps six or seven acres, belonging to the vicar of the parish.

"I have osier beds on the banks of the Dove, at Etwall and Egginton; the peeling season is from the end of April to the beginning or middle of June; in the peeling season I employ all the hands I can get, women and children, mothers bring their babies in cradles with them, whole families work together, the mother breaks the peel (draws the willow through a break), and the children peel. They do it by the bundle, some families will earn 4*s.* or 5*s.* a week. One woman I employ can peel about two bundles a day, at 6*d.* a bundle (size of bundle, 38 inches). The women I employ in light farm work I pay 5*s.* a week, 6*s.* a week in harvest. In this parish I could get as many women (married) as I like, in the next parish (Egginton) few women work out, they have no public-house at Egginton, and the families are better off.

"I hired waggoners by the year, Michaelmas to Michaelmas, at from 12*l.* to 14*l.* a year, and their keep. Men keeping themselves, and not hired by the year, have 14*s.* a week for 39 weeks, and 16*s.* for 13 weeks in summer, when they also have luncheon and supper, and beer if working long hours; I give my men about 300 yards of a drill of potatoes.

"In the lambing season and calving time I find the want of cottages a very great inconvenience.

"Where farmers have convenient cottages they don't have men in their house, and some farmers find food for all their men, giving them 8*s.* a week and their food.

"At Cole Orton, in Leicestershire, I pay 13*s.* a week throughout the year, and 1*l.* for Sunday work, giving the same potato ground; they set as many potatoes as one load of dung will cover."

Egginton.

Population, 355 - Acreage, 2,289.

Cultivation, chiefly pastoral.

36. *Mr. J. C. Nichols*, schoolmaster, says, "Boys are employed in agriculture from 8 years of age.

"Girls are only employed during osier peeling.

"Women are principally employed during osier peeling.

"Women work from 8 a.m. until 5 p.m.

"Boys work from 6 a.m. until 6 p.m.

"Children should not be employed in farm labour under 12 years of age.

"There is a good school endowed by Sir Henry

Derbyshire.
Mr. Culley.
A.
j 2.

Every, Bart., it is taken advantage of in a middling way, there is no cause for the children's non-attendance at school other than farm labour.

"The cottages are tolerably good; they are sufficient for the supply of the labour required; they are conveniently situated with respect to the farms, and are well supplied with water."

36*a*. Evidence of *Mr. Bullock*, occupier.—"About here (South Derbyshire) men are hired by the year from old Michaelmas day, on the borders of Leicestershire from Martinmas, and in North Derbyshire from Christmas day.

"Men have from 8*l*. to 16*l*., with board and lodging. Good men can command about 14*l*. 13*s*. a week is the winter wage for day men; for 13 weeks in summer they have 10*s*. a week, besides meat (five meals a day) and beer.

"The whole population turn out osier peeling in early summer.

"Boys from 10 to 13 are employed in spring and autumn, planting and picking potatoes, and gathering stones; girls of the same age are employed in the same work.

"One or two women are employed on some farms.

"Men work from 6½ a.m. to 5½ p.m.

"Women work from 8 a.m. to 5 p.m.

"There is a good school, which is taken advantage of at all times when the children are not employed, which is the only cause of non-attendance.

"Our cottages are of medium quality, all, without exception, have garden or allotment ground."

36*b*. Evidence of *Edwin Dicken*, labourer.—"Labouring men about here have from 12*s*. to 15*s*. a week. A good many men go to Burton in the winter, where they get 13*s*. a week and beer, and many of them would be out of work in winter if they didn't get work at Burton in the breweries, and if it wasn't the beer it would be a good job for them to get work there, but it spoils some of them getting to drink so much beer. Two or three years ago labourers used to put their cows out in the roads in summer, and help them through with grains; now they are not allowed to turn them into the roads, and so they can't keep them, it's a good job for a labourer to have a cow for his wife to look after and get milk for his children. Some small tradesmen, joiners, and such like can put their cows into a field of Sir Henry Every's in summer, but I don't think any labourers do."

Hilton.

Population, 719 - Acreage, 1,620.

37. Evidence of *Mr. George Lucas*, master of endowed school.—"Boys are employed in agriculture in my parish from about 10 years old, in spring, summer, and autumn.

"Girls are not employed.

"Only a few women are employed in weeding and hoeing corn, picking stones, and haymaking.

"It is desirable to restrict the age at which boys should be permitted to work on the land to 13 years old.

"It is desirable to place restriction on the employment of females.

"There is an infant school and an endowed school in the township, besides private schools; they are generally well attended.

"The cottages are in fair condition; they are sufficient for the supply of the labour required. They are not conveniently situated with respect to the farms. They are not overcrowded, and are generally well supplied with water and well ventilated."

37*a*. *Mr. J. Hudson*, occupier, says, "The following are the wages of my men, who are hired by the year:—

A waggoner has 15*l*. and his keep.
A cowman „ 12*l*. „ „
A lad of 15 „ 2*l*. „ „

Day men average 14*s*. a week for three-fourths of the year, and from 14*s*. to 16*s*. a week, with beer, in hay time and harvest; when working long hours they get luncheon and supper; I always give them supper on Saturday night to keep them out of the public house.

"There are no cottages on my farm; one of my labourers, who has to be on my premises at 5 a.m. to milk, has to walk two miles to his work.

"Some labourers from about here go to Burton in the winter; they get no higher wages than we give, but as much beer as they like, and about three years kills them."

37*b*. *Mr. Jos. Docksey*, occupier, says, "Boys from 11 to 12 years of age are employed in spring crow tenting.

"Girls are not employed.

"Women are employed to weed corn in the spring.

"It is desirable to restrict the age at which boys should be permitted to work on the land to 11 years."

"There is a very good endowed school, the children take advantage of it in a great measure. Some parents neglect sending their children to school.

"Some of the cottages are very good, others very poor; they are sufficient for the supply of the labour required; they are conveniently situated with respect to the farms; they are not overcrowded; the water supply is very good, and they are generally well ventilated.

"The gardens are good, and all the poor belonging to the parish have a quarter acre allotment ground."

37*c*. Register of the children of the agricultural labouring class attending the Hilton endowed school.

Scropton.

Population, 520 - Acreage, 3,340.

Cultivation chiefly pastoral.

38. *Mr. S. Faulkner*, occupier and guardian.—"I employ two or three women in summer weeding and haymaking; some work by the piece (by the thrave) shearing in harvest; by the day I pay them 1*s*. a day. In harvest a woman can earn 2*s*. 6*d*. a day. In harvest I can get pretty nearly as many women as I like. Our labourers have 13*s*. a week for day work for 39 weeks, and 14*s*. a week for 13 week in summer; these men also get piece work, earning by mowing and shearing say 4*s*. a day The youngest lad I have by the year is 16, sometimes in sowing time I have a younger boy or two for team driving.

"Some married women work about four months in the year at 1*s*. a day. Some of our men go to Burton in the winter, but they give so much beer it soon ruins them; if it was not for the beer the winter work supplied by the Burton breweries would be a blessing to our labourers, who sometimes cannot find farm work in winter."

* The winter attendance for Bayford and Bramfield was not given, but was said to be the same as for summer. In the other returns the summer and winter attendance were both given.

1. LETTER to the Assistant Commissioner from *Mr. Thos. Sworder, Coroner for Herts.*

SIR, Hertford, 28th June 1869.

I SEND at your request notes of two cases of inquests, held on the bodies of boys employed in driving carts in agriculture, to prove that boys aged 11 years are not fit to drive carts. Indeed, they are often so small at that age as not to be able to reach the halter on the horse's head, and consequently they can have no control over a blind or unruly horse.

I am, &c.

George Culley, Esq., Assistant Commissioner. THOS. SWORDER, Coroner for Herts.

6th September 1867.

2. Remarks made by the coroner at an inquest held on the body of George Fisher.

The coroner remarked that he believed a Bill had passed or would pass shortly for the purpose of extending the Factory Acts to agriculture, and would prevent such young persons as the deceased from being employed with horses or put in positions of danger.

The deceased was not 12 years old, and it appears he went to work at 5 in the morning, and would naturally become very tired and glad to ride when he could, and he, the coroner, was afraid that he was not able to control the horse he was driving, which was not only blind, but was an old fly horse, and accustomed to go faster than cart horses generally do.

The deceased too was going down hill at the time of the accident, and was consequently less able to control him, and probably in endeavouring to stop him with one rein he pulled him on to the near bank, which upset the cart and horse and killed the deceased. The coroner urged upon all employers of labour the moral, if not legal, responsibility that rested upon them, in seeing that children were not put in positions of danger in doing the work allotted to them.

THOS. SWORDER,
6th September 1867. Coroner for Herts.

6th September 1867.

3. Inquest at Royston on George Fisher, 11 years old. Was employed in driving cart in harvest. Drove loads as well as empties. Blind horse. Boy rode on shafts contrary to order. Went to work at 5 in the morning, and this took place at 5 in the afternoon (12 hours).

17th July 1868.

4. Inquest on Wm. Phipp, aged 11 years. Was employed in driving a horse and cart.

Coroner commented on leaving a horse and cart in charge of so young a boy.

HERTFORD UNION.

Resolution of Board of Guardians.

5. At the weekly meeting of the Guardians of the above Union, held at the Shire Hall, Hertford, on Saturday, the 26th June 1869,—

"The question whether it is desirable to place any restriction on the age at which boys and girls should be permitted to work on the land, and if so, at what age the limit should be placed, was taken into consideration after special notice sent to all the guardians, when it was resolved that it is the opinion of the board that no boys be employed in agricultural labour under 10 years of age, or at 9 if they have a certificate from the manager of the school that they have made sufficient advance in reading and writing to admit of their leaving school at that age."

6. Evidence of *Mr. D. Peck*, relieving officer, Hertford Union, Watton district.—"The worst cottages in my district are in Aston, Datchworth, and Bennington. The best cottages in my district are in the parishes which belong to Mr. Abel Smith, he owns the whole of four and part of a fifth parish.

"The wage for day work just now in the north of my district is 11*s.* a week, towards Hertford it is 12*s.*; this was the rate of wage during last winter; if bread was dearer the farmers would probably raise the wages 1*s.* a week. Besides farm piecework, such as harvesting, mowing, hedging, and hoeing corn and turnips, men get piecework in the woods, barking and cutting faggots. An average able-bodied labourer ought to make from 13*s.* to 14*s.* a week for the year round when the day-work wage is at 11*s.*

"Our labourers have neither pig, nor cow, nor poultry, when they are thrown out of work they come immediately to the rates, all they think about when they have money is drink. In harvest men can earn 24*s.* a week, and they seem no better during that season than any other, they drink the difference and get ill on it. Boys leave school at 10, and go to drive the plough at 2*s.* 6*d.*"

7. *Mr. Thos. Odell*, surgeon and medical officer of Hertford Union, speaking for some of the parishes round Hertford, says, "Boys are employed in agriculture from 8 to 10 years of age in the spring, summer, and autumn, according to the number of the family; in winter they go to school, or in some parishes to a night school.

"Girls are not generally employed.

"Women are employed in haymaking, field weeding, stone picking, &c.

"The labourers sometimes go two miles to their work.

"Women work from 8 a.m. to 5 p.m., and boys work from 6 a.m. to 5 and 6 p.m.

"I think 10 years old would be a very good age as a limit at which boys should be permitted to work on the land, the boys going to night schools during the winter.

"I certainly think it desirable to place a restriction on the employment of females in agriculture.

"There are the National and free schools, which the children cannot take advantage of in large families, being wanted at home to help.

"Some cottages are in a very bad state. Water can generally be had from springs near. Fresh air is not so freely admitted as it should be.

"Owing to the custom of sending all the milk from this county to London, the labourers' families are deprived of a very nutritious article of diet."

BAYFORD.

Population, 297 - Acreage, 1,632.

Cultivation mixed.

8. The *Rev. C. Thornton* says, "Boys at 9 or 10 years of age are employed from May to September minding sheep and cows, &c.; between 10 and 13 they are employed throughout the year.

"Girls are not employed in farm work, nor women to any great extent.

"Women work from 8 a.m. to 5 p.m.

"Boys should not be employed under 10 years of age.

"There is a National mixed school, which is under Government inspection, and which is fairly attended.

"The cottages in this parish and neighbourhood are generally in fair condition, and sufficient, I think, for the supply of the labour required. They are, in this parish, conveniently situated, and none of them (to my knowledge) overcrowded.

"They all have gardens or allotments."

BENGEO.

Population, 1,791 - Acreage, 3,047.

Cultivation chiefly arable.

9. *Mr. J. B. Brandram*, occupier, guardian, and chairman of Herts Chamber of Agriculture, says, "Boys are employed in agriculture at all ages and at all times of the year.

"Girls are not employed.

"Women are employed occasionally in weeding and haymaking.

"The labourers have for the most part a distance of less than a mile to go to their work.

"The hours of work of men and boys are from 6 a.m. to 6 p.m., with half an hour for breakfast, and one hour for dinner.

"Women work from 8 a.m. to 5 p.m., with an hour for dinner. When haymaking, they work later and are paid more, with an allowance of beer.

"I think it is desirable that some restriction should be placed on the age at which boys should be permitted to work on the land, and while at the same time I should be inclined to fix that limit at the age of 10, yet I feel that there are circumstances connected with growth and education which ought to be taken into consideration with a view to allowing certain exceptions.

"The means of education are good, and consist of National schools for boys and girls, an infant school, and mixed schools in the hamlets of Tunwell and Waterford. The labouring class for the most part take advantage of them.

"The condition of the cottages is generally good, and they are, I think, sufficient for the supply of the labour required. They are pretty conveniently situated with respect to the farms (my own men, with one exception, live within half a mile of the homestead). I do not think the cottages are overcrowded, and they are fairly supplied with water. With regard to ventilation, as I have never slept in one of them, I cannot give an opinion.

"The cottages have all gardens.

"The general rate of wages in the parish is 12*s.* a week for day labourers, and 1*s.* per week extra for carters. The wages of boys vary from 2*s.* 6*d.* to 5*s.*, and again, of older lads, from 5*s.* to 9*s.* and 10*s.* per week.

BRAMFIELD.

Population, 191 - Acreage, 1,540.

Cultivation chiefly arable.

10. The *Rev. L. Deedes*, rector, says, "Boys are employed in farm labour from 8 years of age.

"Girls are not employed.

"Women are employed in haytime and in the spring picking twitch.

"The labourers have about half a mile to go to their work.

"Women work from 8 a.m. to 5 p.m., with an hour for dinner.

"I would restrict the age at which boys should be permitted to work on the land to 10 years.

"There is a good school, with a first-rate certificated mistress, which is well taken advantage of.

"The cottages are good; they are sufficient for the supply of labour required, are conveniently situated with respect to the farms, are not overcrowded, and are well supplied with water, and well ventilated. All the cottages have gardens or allotments."

Hertfordshire.
Mr. Culley.
B.
j 2.

HERTINGFORDBURY.

Population, 699 - Acreage, 2,586.

Cultivation chiefly pastoral.

11. *Mr. E. Cousens*, sub-agent to Earl Cowper, says, "No girls are employed in agriculture. Women are usually employed in thistle picking and haymaking.

"There is a very good school in the parish supported by Lady Cowper, also an evening school in winter.

"Generally speaking, the cottages are good, and conveniently situated; they are not overcrowded, and are well supplied with water.

"All the cottages on Lord Cowper's estate have good gardens adjoining the cottages.

"Farm labourers' wages are as follows:—First-class men (shepherds, cowmen, and head ploughman), 15*s.* a week, and 21*s.* a week for harvest month.

"Second class (ploughmen and stackyard-men), 14*s.* a week, and 21*s.* a week for harvest month.

"Third class, 13*s.* a week, and same harvest wage as above.

"Women have 10*d.* a day, except in hay time, when they have 1*s.*"

11*a*. *Mr. J. C. Allen*, occupier, says, "There is a boys' school and a girls' school, and also an evening school for boys and adults during the winter months, which is well attended. The Countess Cowper provides coffee, bread and butter once a week.

"The cottages are generally good, but not sufficient for the labour required. They are conveniently situated for the farms, and lodgers are not allowed.

"All the cottages in the parish have good gardens or allotments of land."

Mr. Allen, who is a large employer of agricultural labour in this parish, as well as Bennington parish, in the same union, was kind enough to extract from his farm books, for the use of the Commission, the following examples of the earnings for 12 months of different classes of adult labourers, taking the 12 months ending May 1, 1869:—

Name and Description of Labourer.	Earnings for 12 Months.			Average per Week.		
	£	*s.*	*d.*	£	*s.*	*d.*
1. Collins, bailiff, formerly labourer	74	0	0	1	8	5¼
2. Bush, working bailiff, formerly labourer.	54	12	0	1	1	0
3. Chapman, works on the farm and drives the engine, formerly day labourer.	54	12	0	1	1	0
4. Edwards, gardener, formerly labourer.	48	2	0	0	18	6
5. Pike, groom, formerly labourer	44	4	0	0	17	0
6. Smith, shepherd - - -	43	5	0	0	16	7½
7. Young, „ - - -	40	3	8	0	15	5
8. Milton, labourer, and feeds thrashing machine.	40	0	2	0	15	4½
9. Tyler, labourer, and thatches -	39	15	1	0	15	3½
10. Cakebread, common labourer -	38	0	9	0	14	7½
11. Hollingsworth, „ „ -	37	1	7	0	14	3
12. Milton, „ „ -	36	6	6	0	14	0
13. Tyler, „ „ -	36	6	6	0	14	0
14. Peddell, horsekeeper - -	37	12	6	0	14	6
15. Warford, „ - -	34	15	6	0	13	4½

Nos. 10, 11, 12, and 13 were not picked men, but represent the average of above 20 such men (common labourers) employed by Mr. Allen. They average, as will be seen, 14*s.* 2½*d.* per man. The day-work wage of the district was dropped from 12*s.* to 11*s.* a week immediately after the harvest of 1868, so that these ordinary labourers, who earn an average of 14*s.* 2½*d.* for the 12 months, exceed the average day-work wage (11*s.* 6*d.*) for the year by 2*s.* 8½*d.* a week.

Mr. Allen employs none but married women, and of these 10 on an average. They are paid 9*d.* a day, working from 8 a.m. to 5 p.m., with an hour's rest. In hay time women are paid 1*s.* a day, and in harvest 1*s.* 6*d.* a day.

The hours of work for men on Mr. Allen's farms are from 5½ a.m. till 5½ p.m., with one hour and a half allowed for meals.

The following are examples of piecework wages paid by Mr. Allen during this summer (1869):—

Mowing meadow hay at Cole's Hill farm, 3*s.* 9*d.* and five pints of beer, or 5*s.* without beer, per acre. Of this hay a man could cut about an acre in the day. On Bennington farm, Mr. Allen was paying at the same time 3*s.* 6*d.* and four pints of beer per acre.

For clover hay he had paid 2*s.* 9*d.* and four pints per acre, where a man could cut an acre and a half in the day.

For reaping and tying wheat last year (1868) Mr. Allen paid 12*s.* to 15*s.* an acre. Giving the men his reaping machine it cost him 9*s.* an acre, and greatly eased the men.

To the man going with the reaping machine in harvest Mr. Allen paid 90*s.* and beer for the month.

11*b*. *Mrs. Fitz-John* says, "My husband is a farm labourer; he has 12*s.* a week. We have five children; the two eldest are boys, 10 and 12 years old, and they are at work, minding cattle and sheep; they get 2*s.* 6*d.* and 3*s.* a week now, but they will be out of work in winter."

11*c*. The following is the Assistant Commissioner's note on Hertingfordbury:—"There are a good many very poor cottages in Hertingfordbury, but none of the bad ones I visited appeared to belong to the landowners. There are seven or eight very bad ones on a hill in the village, where there has been and is yet a good deal of typhoid fever. All these cottages have their offices almost against the back door of the cottage, and the well used by all the inhabitants of the cottages in which there is or has been typhoid fever is just below the block of cottages and offices. These cottages are, some of them, occupied by farm labourers, others by railway workers, and the rent of a poor cottage with one small bedroom is 2*s.* 3*d.* a week."

LITTLE BERKHAMPSTEAD.

Population, 450 - Acreage, 1,689.

Cultivation chiefly pasture.

12. *Mr. B. Young*, owner and occupier, says, "Boys are employed during the summer months; their ages vary from 12 to 16.

"Girls are not employed; and women are only employed in the hay harvest.

"Labourers have under a mile to go to their work.

"Hours of work are from 6 a.m. to 6 p.m.

"No restriction is necessary as to the age at which children should work on the land.

"There is the parish school, which is well attended.

"The cottages in the parish are generally bad and overcrowded; they have all gardens or allotments."

STAPLEFORD.

Population, 226 - Acreage, 1,319.

13. The *Rev. W. H. Oliver*, rector, says, "Boys are employed in agriculture at about 10 years of age all the year round.

"Girls are not employed.

"Our women are only employed in haymaking and in harvest. Six or seven of them are employed in stone-picking and weeding.

"The labourers have less than a mile to go to their work.

"The hours of work are irregular in hay time and harvest. When ploughing the day ceases at 2 p.m. The rest of the year the day's work is from 6 a.m. to 6 p.m., out of which two hours are taken for meals. Women work from 8 a.m. to 5 p.m. at weeding and stone-picking.

"I think 12 would be the best age to which to restrict boys' labour; this would be young enough for them to learn their business, while additional scholarship would make them more apt at their work.

"There is no evil arising from the employment of females in this parish.

"There is a day school, conducted by an uncertificated mistress, attended by all or almost all the children in the parish from 2 years old till they go to work. There are two or three boys who attend Watton boys' school.

"In this parish the cottages are very good, sufficient for the supply of labour required, and conveniently situated. Four new cottages have three bedrooms; all the rest have only two. The evil results to morality in the two-bedroomed cottages is undeniable for growing families. The cottages are well supplied with water, and well ventilated.

"The cottages have all good gardens, of 20 or 30 poles, adjoining their cottages.

"The parishes of Stapleford, Bramfield, Watton, the agricultural part of Bengeo, and half of Datchworth, belong to Abel Smith, Esq., M.P., who takes great pains that his cottages are good and the cottagers well cared for."

13*a*. *Mr. H. Dorrington*, occupier and guardian, says, "Boys are employed in agriculture from 10 to 12 years of age all the year round.

"The education is so good in this parish that there is not a single instance, to my knowledge, of a young girl being employed in agricultural labour. Servants' wages are so high that on leaving the 'training school' they readily obtain 8*l*. to 10*l*. a year, which increases to 18*l*. I have known young girls in this parish under 20 refuse good situations and 16*l*. per annum.

"The hours of work of men and boys are from 6 a.m. to 6 p.m. Women work from 8 a.m. to 5 p.m.

"I do not see that it is desirable to restrict the age at which boys should be permitted to work on the and, as you seldom see a boy at work till he is 11 or 12 years of age.

"No restriction is necessary on the employment of females. About this part only a few married women go out weeding the corn for about a month in spring.

The means of education provided for the children of agricultural labouring class are the parish school, night schools during the winter months, and a training school for girls, from which they readily obtain situations.

"The cottages are first class. All the cottages belong to one landlord, Abel Smith, Esq., M.P.; they are sufficient for the supply of the labour required; they are conveniently situated with respect to the farms. *No* lodgers are allowed, unless by special permission. The cottages are *well* supplied with water, and are well ventilated.

"The gardens are first class, and thoroughly well cultivated.

"Hiring about this part is quite out of date. Weekly wages in all cases. Men earn 2*s*. per day of 12 hours; if over 12 hours they earn 2*d*. an hour extra. Boys earn 6*d*. to 8*d*. a day, and 2*d*. an hour over 12 hours. Young men earn from 1*s*. to 1*s*. 6*d*. a day, with 2*d*. an hour after 12 hours."

Tewin.

Population, 547 - Acreage, 2,615.

Cultivation chiefly arable.

14. *Rev. H. J. Daubeny*, rector, says, in answer to a circular of inquiry,—

"Boys are employed from 8 years of age, usually during spring and autumn.

"Girls are not employed.

"Labourers' wives are generally employed in hay time and harvest, and sometimes in stone-picking and weeding in spring.

"Boys should not go to work before they are 11 or 12.

"A free school for all is provided by endowment from Earl Cowper's family, and is taken advantage of with few exceptions.

"Some old cottages have been taken down, and others are rebuilding. We have sufficient, and they are fairly supplied with water. No evil results of overcrowding have come to my knowledge.

"All cottages have gardens, and many have allotments also.

"There are 80 cottages in the parish."

Watton.

Population, 864 - Acreage, 3,499.

Cultivation chiefly arable.

15. The *Hon. and Rev. L. Barrington* says, in answer to a circular of inquiry,—

"At about 10 boys are employed, and from that time are rarely out of work.

"Girls are never employed in agriculture.

"Women are not generally employed, excepting in hay time and harvest, and in the latter only when their husbands take piece-work; they also weed.

"Women work from 8 a.m. to 5 p.m.

"As far as this parish is concerned, I think restriction as to the age at which children should be employed is unnecessary.

"There are three schools for boys, girls, and infants, all well attended, and efficient. Indifference of parents is the only thing that interferes.

"The cottages owned by Mr. Abel Smith, which form by far the greatest part, are excellent, and I believe sufficient for the labour required *generally*. One or two farms are rather isolated. The cottages are not crowded. Restriction is placed on the tenants in regard to numbers and lodgers. A lodging is provided for single men at a moderate charge. Immorality, when it occurs, is not from crowding. The supply of water is fair, but not universal, and some are dependent on neighbours' pumps or must go to a distance to the river or public pump. The houses are generally well ventilated.

"*Almost* all the cottages have good gardens, and if not, there is more ground in allotments than is really requisite, at a very moderate rent, and the rent of the cottages is *very low*.

15*a*. *Abel Smith, Esq., M.P.*, landowner, says, "In very few cases boys under 10 years of age are employed in farm labour in this parish, and in these cases for a part of the year only.

"Girls are not employed in farm labour, and women only in weeding and haymaking.

"Women work from 8 a.m. to 5 p.m., and have about a mile to go to their work.

"I think it is desirable to restrict farm labour to boys over 10 years of age. It is not desirable to place any restriction on the employment of females as employed in this neighbourhood.

"Our schools are under Government inspection, and are very well attended by the children of the labouring class.

"The cottages are good and sufficient for the supply of the labour required. They are conveniently situated with respect to the farms; they are not generally overcrowded, are well supplied with water, and are well ventilated.

"All the cottages have good gardens or allotments of land.

"At piece-work labourers earn from 15*s*. to 20*s*. per week; ordinary labourers, 11*s*., 12*s*., and 13*s*. per week; from 20*s*. to 30*s*. per week during hay and corn harvests."

15*b*. *Mr. J. B. Woollatt*, occupier and guardian, says, "Boys are not generally employed under 10 years of age; from that time they work constantly on the farms.

"Girls are not employed.

"About one-fourth of the labourers' wives go out for two months in the year weeding and haymaking.

"Men work from 6 a.m. to 6 p.m.; boys the same. Women work from 8 a.m. to 5 p.m., except in hay time, when they work till 7 p.m.

"No restriction on the labour of children is required.

Hertfordshire.

Mr. Culley.

B. 2.

"There are two schools, generally well attended by the children of the labouring class.

"The cottages are good and sufficient for the labour, and conveniently situated generally; all have good gardens.

"Wages are as follows:—Ploughmen, 13*s.* a week; day labourers, 12*s.* In the summer they have about 2*s.* extra, and earn about 5*l.* 5*s.* during the harvest month, exclusive of beer, which is also found."

HATFIELD UNION.

16. *Resolution of Board of Guardians*, June 17th, 1869.

"The Board are not of opinion that it is desirable to fix an age for the employment of agricultural labour."*

17. Evidence of *Mr. W.N. Sladden*, relieving officer.—"In half of this union the women and girls plait straw, boys generally go to field work.

"The female plaiters are very useless for all domestic work; they can't even put a patch on their husband's clothes, and they can't earn more than an average of 2*s.* a week just now where they have families.

"The guardians do all they can to discourage plaiting, and try to get the parents to send their girls to service. In the workhouse the matron prepares the girls for domestic service, and many have succeeded well.

"There are some good and some very bad cottages in the union; on the whole I cannot report favourably of them."

HATFIELD UNION.

Population, 6,189 - Acreage, 23,027.

18. The *Hon. and Rev. W. C. Talbot*, vice-chairman of Board of Guardians, says, "Boys are employed at various ages, beginning at, say, 9 years, at all seasons of the year, though chiefly in hay and harvest times.

"Girls are rarely employed.

"Women are chiefly employed in haymaking and harvest.

"There is the National school, which is very well attended.

"I cannot answer generally for the union; in my own parish the cottages vary very much; some are very good and some very bad. In the town of Hatfield there are many cottages deficient in ventilation and in water supply. The town cottages certainly not well situated with respect to the farms. I do not believe the cottages to be overcrowded. There is a considerable amount of drunkenness and some immorality, but this I attribute to the congregation of cottages rather than to overcrowding of inhabitants.

"Many cottages have gardens, but not all."

HATFIELD.

Population 3,871 - Acreage, 12,619.

Cultivation chiefly arable.

19. *Mr. W. J. Webb*, occupier and guardian, says, "Boys are employed as young as 10 years old bird keeping in October and November, and again in February, March, and April; but boys of 12 and 13 are useful all the year.

"I do not know of any girls being employed.

"Women are employed to the extent of one to 100 acres.

"Men work from 5½ a.m. to 5½ p.m.

"Women from 8 a.m. to 5 p.m.

"I do not think it desirable to restrict the age at which boys should work on land.

"Not many of the cottages are conveniently situated with respect to the farms.

"Ploughmen earn 14*s.* per week.

"Hedgers earn 13*s.* per week.

"Shepherds earn 14*s.* per week.

"Day labourers earn 12*s.* per week."

NORTH MIMMS.

Population, 1,095 - Acreage, 4,925.

Cultivation mixed, about one-half arable.

20. *Mr. R. W. Gaussen*, landowner, J.P., and chairman of Hatfield Union, says, "Boys are not usually employed on farms before they are 13 or 14 years old, except in spring, when younger boys are employed for a short time to keep birds off the corn.

"I do not know of any case of the employment of girls under 13 in agricultural labour.

"Women are employed in haymaking and harvest, and in spring to weed the corn.

"I cannot answer generally as to the distance labourers go to their work, but I should think in this parish not far. I myself have for many years provided cottages on the spot for my principal labourers, and have found the system answer well, but it is not generally adopted in the neighbourhood. With the exception of hay time and harvest the employment of women and girls in agriculture is but little, and at those seasons they can generally get work close at home.

"I hardly think it would be desirable to place any restriction on the age at which boys should be permitted to work on the land. Of course it would be better if the boys could be kept at school longer, but their wages for a few weeks in spring are a great blessing to their families. I think encouraging the night schools would be of more benefit than restricting the labour in this parish.

"I do not think it would be desirable to place any restriction on the employment of females, as hardly any female children are employed in agriculture here, and the women and older girls only in hay time and harvest; they most of them work at straw-plaiting in their own cottages.

"In this parish there are a boys' school, a girls' school, and an infant school, all well attended, but the girls stay at school rather older than the boys. There are two or three night schools.

"The cottages are fair, of course some worse, according to owners. In my own parish I know of no very flagrant case of overcrowding, though it is not very easy to prevent it.

"Most of the cottages have gardens, more or less."

ST. ALBAN'S UNION.

21. *Resolution of Board of Guardians*, July 2nd, 1869.

"This board are of opinion that it is not desirable to place any restriction on the age at which children should be permitted to work on the land."

22. *Mr. Thomas Moore*, relieving officer, says, "The worst cottages in this union are in the open villages, but they are better here than in the union I left in Dorsetshire (Bridport Union), and wages are much better here; there their best price was 9*s.* a week, here a carter gets 14*s.*, sometimes 15*s.*, and men get 12*s.* a week for day work.

"The labourers don't care about educating their children; not many farm lads of 15 or 16 can read or write."

HARPENDEN.

Population, 2,164 - Acreage, 5,061.

Cultivation, four-fifths arable, one-fifth pasture and wood.

23. *Mr. R. Sibley*, occupier and vice-chairman of Board of Guardians, says, "Boys are employed from 10 years of age and upwards in the summer and from 13 in the winter.

* This resolution was carried by a majority of three to two as against a resolution in favour of restricting labour generally to children over 10 years of age, with an exemption for those over 9 who can read and write, the only tenant farmer who voted being in favour of the restriction above named.—G. C.

"Girls are not employed, and only a very few women work out in the hay time and harvest.

"Labourers work 10 hours.

"I do not think any boys should be allowed to work under 10 years of age, and between that age and 13 I think the boys ought to go to school in the winter.

"There are six schools, viz., three British and three mixed National. No child under 8 years old has above one mile to go to school. I am certain the parents take advantage of the schools for the boys, but that many of the girls are kept at home during the straw plait.

"The cottages belonging to the landed proprietors are in a good state; some belonging to private speculators are very small. The cottages are very well situated for the labour on the farms. Many are overcrowded by having only two bedrooms; where there is another room a lodger is generally taken in, and the rents have increased 40 per cent. in 20 years, with the exception of the cottages belonging to the landed proprietors.

"Nearly all the cottages have small gardens, some much larger than others, and there are a great many allotments near the village well cultivated. I believe all the cottagers can get allotments if they bear good characters.

"Shepherds earn 15*s.* a week.
"Carters „ 13*s.* „
"Day labourers „ 12*s.* „

with the exception of their earnings in hay time and harvest, which amount to about 3*l.* per annum more. More weekly wages can be and are earned by piecework.

"I am sorry to say we have 34 public houses and beershops."

23*a*. *Mr. J. B. Lawes*, landowner and occupier, says, "Boys from 8 to 12 years of age are employed in crow keeping after wheat sowing in spring and in autumn for about six weeks.

"No girls are employed.

"Women are hardly employed at all, straw plaiting being more profitable.

"Labourers go half a mile to their work.

"Hours of work are from 5½ a.m. to 5 p.m. in summer, and all daylight in winter.

"I see no reason for restriction as to the age at which boys should be permitted to work on the land, but I think every boy employed should at a certain age be compelled to pass a certain examination in reading and writing.

"There is a National mixed school and a British and Foreign for boys, girls, and infants. Altogether over 500 children are educated. The plait takes away the girls.

"The cottages are bad and insufficient for the wants of the labourers. They are tolerably well situated; they have plenty of good water from the chalk; they are scattered over a large area.

"A good many cottages have gardens, there is also about 20 acres of land devoted to allotments, divided into 160 gardens, with a club-house in the centre, where the labourers can have their beer."

23*b*. Evidence of *Mr. John Govan*, bailiff to Mr. J. B. Lawes.

On the value of labour in Herts as compared with Ireland and Dumbartonshire, where he has had experience in the employment of farm labour.

"Farm labourers here earn on an average for 12 months 12*s.* a week, the same class of men in Dumbartonshire would receive 15*s.* a week, and in Ireland 10*s.*

"I consider that labour is considerably dearer here than in the West of Scotland per acre, and it is also my opinion that it is even dearer than in Ireland, for although the Irish labourer, if left to himself, is one of the dearest in the world, if well looked after he can go through a wonderful deal of work."

REDBOURN.

Population, 2,043 - Acreage, 4,515.

24. *Mr. H. Edwards*, occupier and guardian, says, "The cultivation is chiefly arable, in five-course husbandry.

"The whole of the boys from 9 years of age are employed, chiefly in the spring, bird-keeping and weeding.

"Females are not employed, excepting a few days in the summer haymaking.

"Labourers have about two miles to go to their work. They work from 6 a.m. to 5 p.m.

"No restriction is necessary as to the age at which children should be employed on the land, as they only do very light work, and are never employed under 9 years old.

"Those parents who choose to send their children to school, and most of them do, have the advantage of a public school, charge 1*d.* a week, and the parish is well attended to by kind ladies, who frequently pay the schooling if the children are absent from want of means.

"The condition of the cottages is very bad, particularly those connected with farms. They are crowded, and the moral results are deplorable. They are pretty well supplied with water; they are insufficient in number for the supply of labour required.

"Nearly all the cottages have gardens; there is very little land occupied by allotments."

SANDRIDGE.

Population, 833 - Acreage, 5,766.

Cultivation chiefly arable.

25. *Mr. J. Cox*, occupier and guardian, says, "Girls are not employed in farm labour, they are engaged in straw plaiting from a very early age. Women, too, are chiefly engaged in plaiting. A few are employed on farms in weeding in summer.

"Men work 11 hours a day, and women nine.

"It is not desirable to restrict the labour of boys on farms, as they rarely go to work before they are from 10 to 12 years of age.

"There is a good and well-conducted parish school, and the average attendance is from 80 to 90 per day.

"We have some good and some bad cottages; they are improving. We have a good supply of labour, but all are employed.

"Most cottages have allotment ground. Able-bodied labourers have from 11*s.* to 14*s.* a week; boys from 3*s.* 6*d.* to 5*s.*"

ST. STEPHEN'S.

26. *Mr. John Gomme*, occupier, says, "Boys are chiefly employed in summer, and seldom under 12 years of age.

"Girls are not employed.

"A few women are employed in summer weeding, and during the hay harvest occasionally.

"I do not think it desirable to place any restriction on the age at which boys should be permitted to work on the land.

"There are three schools, and I believe most of the children avail themselves of the privilege. The parents do all in their power to promote the education of their children.

"The cottages are in good condition, but they are not sufficient for the supply of the labour required. I have no cottages on my farm, and the greater number of my labourers have more than a mile to come to their work.

"There is a deficiency of garden ground to most of the cottages. In one part of the parish the cottages have an allotment of land about one and a half acres. With regard to the parish of St. Stephen's, the poor are assisted by coal clubs raised by a subscription of the owners of the land and others; the coal is sold at a reduced rate, and taken home to the cottagers by the farmers gratuitously. And there is also a clothing club similarly assisted, and a loan of blankets during the winter months."

Hertfordshire.

Mr. Culley.

B.
j 2.

WHEATHAMPSTEAD.

Population, 2,017 - Acreage, 5,033.

27. *Mr. C. H. Lattimore*, owner and occupier, says, "The cultivation is generally tillage upon four-course, five-course, and other irregular systems.

"The land in this parish, being principally arable, is adapted for wheat, and also for all other kinds of grain, turnips, &c. When well cultivated with root crops and fed off by stock, it requires a great outlay for labour. I find that I can employ all the year four men and one boy to every 100 acres of arable land. The average employment, however, is less.

"A certain number of boys are constantly employed with sheep and horses all the year, their ages varying from 12 to 15. The periods when younger boys from 9 to 10 years old are employed are in spring bird scaring, and in summer weeding in gangs with an overlooker, where the land is pestered with charock and weeds.

"Girls under 18 years are very rarely employed in the fields at any time; the only time would be in haymaking and binding corn in harvest.

"A few farmers employ women to weed their corn, but in wet seasons this is not at all desirable, as they break down the corn, and generally get laid up with colds, &c. They are employed in haymaking and at harvest occasionally.

"Whenever I employ women (for haymaking only, they reside close to their work. I have known instances of women going a mile and a half to their work, and returning that distance in the evening.

"Men and boys work 12 hours per day, if over that time they are paid proportionately.

"Women work from eight to nine hours per day, and extra time in hay harvest. From their eight or nine hours one hour and a half is deducted for meals.

"I think boys ought not to work on land under 9 to 10 years of age, as they are unable to earn anything by work; still they get an insight and acquaintance with the rudiments of their occupation by a moderately early contact with it, and it would be well to unite industrial training with intellectual cultivation.

"It seems desirable to prevent the employment of any females in agriculture under 14 years of age. In this part of the county the occupation of females is in plaiting and in domestic service, but they have evinced of late years a strong dislike to restraint or discipline of any kind.

"There is a National school, built by public subscription, to which the poor are admitted at 2*d.* per head, but as great efforts are made to push forward those pupils who obtain a Government allowance, the lower class of attendants make but little progress. A child of one of my labourers was an attendant for nearly a year without learning his letters. The teachers appear to know but little of arithmetic, and are incompetent to teach the children either to practise or to respect industry!

"The number of the cottages is ample, but modern cottages, run up by builders on speculation, are very small and crowded; as to their site, they are rather congregated in the villages than near to the outlying farms, from whence labourers have to travel, say, one to two miles night and morning. These new speculative erections are unfavourable to morals and ventilation. This district is well watered from a river running through it.

"I think the labourers are well supplied with gardens and allotments, so that they generally decline to accept waste ground.

"The wages of different classes of farm labourers are as follows:—

"Ordinary able-bodied labourers, 11*s.* a week and beer.

"Bailiffs and herdsmen, besides perquisites, 15*s.* a week.

"Shepherds, besides perquisites, 17*s.* a week.

"Boys, 3*s.* to 5*s.* 6*d.*, with beer.

"In 1868 ordinary labourers were paid 12*s.* a week, and other labourers' wages were higher in proportion."

27*a*. The following are *Mr. C. H. Lattimore's* answers to questions which I proposed to him.—G. C.

Question 1.—Are the purely agricultural counties, such as Herts, Bedford, Oxford, and Berks, overcrowded with population?

Answer.—"The population of the four named counties have doubtless a constant tendency to increase beyond the prospective demand for their labour."

Question 2.—How far could the overcrowded state of the labour market be relieved by higher cultivation?

Answer.—"From experience I estimate that a higher mode of cultivation (consequent to a state of leases with security, compared to annual tenancies at rack rents,) would require an increase of 10 to 20 per cent. more labour upon the land."

Question 3.—How far do you think improved education will tend to thin the labour market and improve the quality of labour?

Answer.—"An industrial moral education, including reading and writing and the first four rules of arithmetic, would induce the reflective portion to think, compare, and calculate their existent prospects with other chances of improving their condition, thus inducing them to make personal efforts to qualify for an improved position.

"It appears to me that we have no *properly qualified* teachers of either sex *at present.*

"The love of imitation is *the first* and most powerful impulse of the youthful mind, which is always more disposed to imitate *the acts* of its teachers than to value their *abstract* lessons. For instance, if the female children were to see their mistress *dust, scour,* and *clean* up their schoolrooms continuously (instead of leaving such duties to a charwoman), they *would* be taught to respect and practise domestic duties more than they would by 50 *parsonic homilies* on the importance of industry; while they now conclude that such offices are *degrading* and beneath the practice of *educated* people.

"The present system, under the clerical influence, is *artificial, imperfect,* and expensive. The majority of the children make but little progress, while the results tend to fit them for no *active* or *responsible* positions.

"It *would* be a happy exchange to encourage industrial habits for *chanting* to the *goose-step!* As all things become easy and pleasant to those who understand them, children might thus be made fitter to occupy situations of domestic *trust* and usefulness where in all probability their future lot in life is cast.

"*Winter* and *night* schools are extremely valuable in enabling the children to retain their learning, which they are so apt to lose without some encouragement to retain. A good book might be written to show how education has been improved in Scotland."

HITCHIN UNION.

Population, 25,603 - Acreage, 64,847.

28. *Board of Guardians.*

Answers given by the Board of Guardians for Hitchin Union to questions asked in the Commissioners' Circulars of Inquiry, June 29th, 1869.

1. "Boys are occasionally employed to assist in farm work from 7 years of age; they are rarely taken into constant work under 10 years. There is very little demand for the younger boys during the winter months.

"Neither girls nor women are employed in farm work.

"Usually the children live near the work where they are employed.

"Farm labourers work 10 hours daily.

"In this district no abuse of children's labour is known to exist, consequently there is no necessity

to restrict the age at which they may work on the land.

"Most parishes have National schools, and some have also schools on the British system. Parishes which are entirely without are usually within reach of neighbouring schools. In consequence of the employment of children in plaiting, and also the indifference of their parents to the value of education, there is much neglect in sending children to school. There are plaiting schools in most of our parishes, to which children are sent from 3 years old; in many of these neither reading nor writing is taught, the object being to extract a large amount of work from the children. These greatly interfere with the attendance at the educational schools. This neglect on the part of the parents is increased by the temptations offered at the beer-houses, where the men often spend what their families can ill spare, and consequently children are so badly clothed as to be refused admission into the schools established for their benefit.

"The cottages are in many cases much overcrowded, and the morality of the labouring class in some districts is very low, as the registrar's return of illegitimate births will testify. In several of our parishes houses are badly supplied with good water; and proper ventilation is apt to be neglected.

"In most of our parishes the poor are supplied with gardens."

29. Evidence of *Mr. W. Strickland*, relieving officer. —"Wages of able-bodied labourers vary from 10*s.* to 12*s.* a week. There are more at 10*s.* than 12*s.* By piece-work they can add, on an average, for the year 2*s.* a week to the day-work wage.

Boys begin to drive the plough at from 10 to 11 years of age.

Lads in some places are hired by the year from Michaelmas, but the custom is disappearing. The wage is paid weekly, with a retaining fee of about 1*l.* at Michaelmas.

"Lads of 16 get from 4*s.* to 7*s.* a week.

"The labourers' cottages are generally in open villages, and many of them bad. The worst are in the back lanes of towns such as Baldock and Hitchin. There are very bad cottages also in Stevenage, Weston, and Clothall.

"In Codicote the cottages are very good, and Mr. Hancock is building very good ones at Willian."

Shephall.

Population, 234 - Acreage, 1,142.

Cultivation:—Arable, 750; pasture, 222; woodland and waste, 170.

30. The *Rev. Wm. Wortham*, in answer to circular questions, says, "Boys generally go to work about 10, and sometimes return to school during the winter.

"No girls are employed on farm labour, and women rarely, except for haymaking.

"Women work from 8 till 5.

"I see no reason to place any limit on the age at which children should be employed in farm labour.

"There is a day school, which is very regularly attended.

"Six men are sufficient for 100 acres of mixed cultivation, and we have sufficient cottages in this parish. Twenty-eight cottages have two bedrooms, and six have but one. We have no cottage with three bedrooms. Two or three cottages are certainly overcrowded, and no doubt this want of accommodation as to bedrooms is productive of great evil. On the whole, however, our cottages are fairly good; they are about equally divided as built of brick or lath and plaster. All but four have gardens, and all have outhouses. For water, most of the villagers come to the parsonage pump. The cottages belong chiefly to the landowners, and the rents vary from 1*s.* 6*d.* to 1*s.* 8*d.* a week."

Stevenage.

Population, 2,352 - Acreage, 4,434.

31. *Mr. John Smith*, occupier and guardian, says, "The cultivation is chiefly arable, and on the four-course system; a crop of oats is, however, sometimes taken after wheat.

"Boys are not often employed before 12 years of age.

"No girls are employed; a few old women are employed in weeding and haymaking.

"Labourers have not more than a mile to go to their work.

"Men work from 5½ a.m. to 5½ p.m., the women as a rule come at 8 a.m. and leave at 5 p.m.

"It is not desirable to place any restriction on the age at which their boys or girls should be permitted to work on the land.

"We haveevery good National schools, and also an infant school.

"The cottages are tolerably good, and quite sufficient for the labourers, but the rent is much higher than in those parishes where they are on the farm and the property of the owner, the cottages here being generally the property of an indifferent party.

"Most of the cottages have gardens.

"The average wages of able-bodied farm labourers here is about 12*s.* a week, with the exception of hay time and harvest. Strong lads and old men earn 9*s.* or 10*s.* a week, and ploughboys 4*s.*"

Willian.

Population, 281 - Acreage, 1,854.

Cultivation chiefly arable.

32. *Mr. Chas. Sworder*, occupier and guardian, says, "Boys are employed in agriculture from 10 years of age.

"Girls are not employed.

"About six or eight women are employed for two or three months in summer, weeding and haymaking.

"Women work from 8 a.m. to 5 p.m.

"I do not think it desirable to restrict the age at which boys should be permitted to work on the land.

"There is the village school, which is fairly attended.

"Some of the cottages are very good, others very bad; they are sufficient for the supply of the labour required, and conveniently situated. Some take in lodgers, some are well supplied with water, others are deficient.

"Most of the cottages have gardens or allotments.

"Ploughmen and horsekeepers earn from 14*s.* to 15*s.* per week; shepherds and stockmen earn from 15*s.* to 16*s.* per week; machinists, &c. earn from 16*s.* to 18*s.* per week; ordinary day labourers earn from 13*s.* to 14*s.* per week; besides beer at times.

Buntingford Union.

Wallington.

Population, 238 - Acreage, 1,950.

Cultivation chiefly arable, about 140 acres pasture, and 45 woodland.

33. *Mr. Hugh Rayner*, occupier, says, in answer to circular of inquiry,—"Boys begin work from 9 to 12 years of age, and are employed all the year round.

"Girls are very rarely employed till 13 or 14 years of age; principally weeding and picking twitch, all light work.

"About 13 women are employed in the parish, and these only in suitable weather in the summer.

"The labourers have sometimes a mile to go to heir work, but generally speaking it is close to their tomes.

"It is decidedly undesirable to place any restriction on the age at which boys should be permitted to work on the land. How is the parent to maintain the children if they remain at home till 11 or 12 years of age? They must begin early, otherwise they are not fitted for agricultural labourers.

"There is a good school and a regular governess, of which they all take advantage. There is also a night school in the winter months for boys that are employed on the farms, at which nearly all attend.

Hertfordshire.
Mr. Culley.
B.
j 2.

" The cottages are good and more than sufficient for the labour required; they are close to the farms.

" Those cottages which have not good gardens have an allotment close at hand.

" Shepherds earn 12*s.* per week.
" Carters „ 11*s.* „
" Day labourers 10*s.* „

" But this does not include extra harvest wages. Mowing or work that is generally done by the kine or bargain, at which men usually earn one or two shillings a week extra.

" The cottages, where they belong to the estate, are generally let at 40*s.* or 45*s.*, when in reality they are worth from 4*l.* to 5*l.* each a year."

WARE UNION.

ST. MARGARET'S.

Population, 93 - Acreage, 382.
Cultivation chiefly arable.

34. *Mr. W. Heard*, occupier, says, " Labourers work from 6 a.m. to 6 p.m.

" It is not desirable to place any restriction on the age at which boys should be employed in agriculture, as they are only used to lead horses at plough, and they are generally 12 years of age and upwards.

" It is not necessary to restrict the employment of females, as only a few married women are employed.

" There are schools for boys and girls in the neighbourhood which are well attended.

" The cottages are very good and well situated with respect to the farms; they are not overcrowded, and are well supplied with good spring water.

" All the cottages here have gardens attached to them.

" The wages of agricultural labourers are from 13*s.* to 15*s.* a week usually. Boys' wages are from 4*s.* to 5*s.* a week."

THUNDRIDGE.

Population, 394 - Acreage, 1,600.

Cultivation chiefly arable.

35. Extracts from a return by the *Rev. Thos. Woodward*, vicar.—"There is in this parish a better class of labourers who keep their boys at school till they are 12 or 13, and an inferior class who send their boys to labour at 7 years old in a few instances, and at 8 or 9 as a rule; few of this class keep them at school till 10 years old.

" Girls are not employed in farm labour as a rule, and women only to a small extent in light work, not in a manner to injure health or morals. They have no great distance to go to their work.

" Women work from 8 a.m. to 4 p.m.

" I think there are difficulties in the way of placing any restriction on the age at which boys should go out to work, as in the case where labourers have large families. The tenth birthday, I think, ought to be the limit, if any be fixed by law.

" So far as the question applies to this parish, I do not think it necessary to place any restriction on the employment of females. The young are not employed, their education is good, and the work done by married women is not injurious. There are very few of them employed at all. I fear that other districts do require some such restriction.

" There is a mixed school for boys and girls and an infant school; also a night school for young men taught by myself. The girls take good advantage of school, the boys of the labouring class do not, they leave it so early for labour.

" Some of the cottages are very good, the smaller number are bad; they are sufficient for the labour required; they are conveniently situated with respect to the farms, but there are not rooms enough in many cottages for the separation of the sexes. Most cottages have good water near them. Ventilation is little attended to in the bedrooms.

" Cottages out of the village have gardens attached to them. There are allotment gardens provided by R. Hanbury, Esq., at a small rent for the villagers."

35*a*. Return by *Mr. R. Hanbury*, landowner and occupier.—"In this parish some go to work at 7 or 8, and so on; a few remain at school till 12 or 13 years old.

" Girls are not employed.

" Women are very little employed, and not in work injurious to health or morals.

" It is desirable to limit the age at which boys should be permitted to work on the land to 10 if at all, but there are difficulties in the way.

" There are plenty of schools. The girls take good advantage of them and are educated enough; many of the boys do not, and leave with very little education.

" The cottages are sufficient for the supply of the labour required; the rooms in many are not numerous enough to admit of the separation of the sexes. There is water enough; ventilation is badly attended to.

" All the cottages have gardens or allotments."

SOMERSETSHIRE.

WILLITON UNION.

1. Meeting of Board of Guardians at Williton, Feb. 15, 1869 ; the Rev. Robert Poole, Vicar of St. Decumans, Chairman of the Board of Guardians in the chair. Present also, Sir Peregrine Acland, Bart.; Sir Alexander Hood, Bart.; J. Blommart, Esq.; Messrs. Kedner, Monksilver, Vice-Chairman; Oatway, Withycombe; Charles Dibble, Clatworthy; Lethbridge, Bicknoller ; Lutley, Kilton ; Corner, Sampford Brett ; Southcombe, Stringston, &c., &c.

General sense of the meeting as regarded boys. Boys employed very young, beginning first at 8 or 9, bird-keeping, but that is not regular work ; it lasts for a few months, and then the boy leaves off work again, and can go to school if he or his parents wish it. In the present low state of the wages parents cannot get on with a large family, unless they send them out into the fields as soon as they are old enough to earn a shilling or two. The wages in the district are very low, but as the union extends from near Bridgwater to the Devonshire border, there is room for increase ; thus, near Porlock the money wages are from 7*s.* to 8*s.*, about Stowey, 10*s.* ; but that is not to be taken as a criterion of the full amount of wages. Cider, which is another full shilling, is given also, and there are many other perquisites, especially in the west, such as firing, the run of a pig, grist corn cheap, &c. Farmers cannot afford to raise wages, unless rents are lowered ; and in the present state of eager competition for land, landlords are not likely to lower their rents. The consequence is that to eke out the subsistence of the family, a child is sent to work as soon as ever he can earn anything, and by making 2*s.* to 2*s.* 6*d.* by bird-keeping, he can support himself, free of expense to his parents. It is not the farmers who want them out, so much as the parents ; though on this subject accounts are contradictory ; Mr. Corner, of Sampford Brett, one of the largest farmers in the union, said that the parents sent out their young children to oblige him. At the same time it is an object to a farmer to get his work done as cheaply as possible, and if he has a large farm, he will require many young bird-keepers ; of course the younger the child the cheaper his labour. Bird-keeping is generally done by boys, but little girls are employed too ; in some districts just as frequently as boys. It is not a usual thing for parents to come and ask as a favour for work to be given to boys, but it is generally given as soon as they are old enough for it. A farmer will generally employ the child of one of his labourers as soon as he thinks he is up to some work. Birdkeeping has to be done all the week round ; a boy cannot have a holiday from it on Sunday. The gentlemen present did not at all approve any plan of preventing boys under 12 from working out ; the general sense seemed to be that if that were done the labouring class could not get on. A sturdy boy of 11 wants more food and clothes than his father on 8*s.* a week can afford to give him, while he is living in idleness, and making nothing towards the common purse. The Rev. Mr. Poole said that compulsory education is a dream, you cannot introduce it, unless Government votes money to pay the parents for work the boys might have done, had they been sent out to work early instead of going to school ; and to do that all over the country would require millions.

The women employed are mostly labourers' wives. It is often expected, when a farmer gives or lets a cottage to a labourer, that his wife should, if able-bodied, go out to work in the busy times. Their regular rate of wage is 8*d.* a day, of course more in harvest. Many farmers when hiring a labourer will

Somersetshire.

Mr. Boyle.

k.

ask if his wife is able-bodied. From two to four are employed on a farm of 200 acres; but seldom in regular work; they come out more for a job, such as turnip cutting, hoeing, weeding, &c. Mr. Corner says that they are the cheapest labour you can have; many of them will do almost as much as a man, and their pay is half as much. Widows will work sometimes, but unmarried girls are scarcer. Very often a girl who has left her place because she does not like it, will come back and work out; or a girl who labours under any deformity or physical defect, that does not incapacitate her from work. As a rule though you will not find above one or two in a parish; most girls go to service. Out-door work makes them rougher certainly, but as a rule, their characters do not suffer from it, though many come out to work, who have "had a misfortune" in service or elsewhere.

The farmers seem to consider their people well off in spite of the lowness of wages. Mr. Corner, who has a farm near Bath, where he gives 12*s.* a week, reckons his men on his Sampford Brett farm better off than those near Bath, though they only get 10*s.* a week, and perquisites. As a rule food is cheaper than near large towns.

Cottages in the district vary very much; on the outskirts of Dunster and Porlock are some very bad. The larger proprietors have been doing much in the neighbourhood lately for bettering the habitations of the poor.

2. *J. Blommart, Esq.*, Willett Hill.—Thinks that farmers ought to have each two cottages under them, one for the carter, the other for the shepherd or herdsman. If he has a large farm, he might have three or four, such as one for each of his carters, one for the herdsman, one for the shepherd. Thinks that the ordinary labourer ought to hold directly of his landlord. He has just been getting his own cottages into hand. Of course the farmers do not like it, they think the labourers are too independent as it is.

3. *Rev. Robert Poole*, Chairman of the Board of Guardians, Williton, Vicar of St. Decumans, Watchet.—Reckons Watchet and Williton perhaps the two best and most flourishing parishes in the union. Watchet being itself a seaport, a good many of the men are sailors, and a good many more are occupied in getting up the iron, which comes down from Brendon Hill, and is exported from Watchet. On the whole, however, it is decidedly an agricultural parish; a great many agricultural labourers live in the village, and go out to work in the farms around, and almost all their wives go out too. The women must go out to work when wages are so low, it is a great object to them to add 8*d.* a day to the husband's earnings; 8*d.* a day is the regular pay for women. Men's wages are 9*s.* a week and cider, but no perquisites in this parish. The time when the greatest distress is the first few years after marriage; they keep company a few years, and end by marrying very young without calculating that they have no furniture or other provision; they end by being in debt for many years, and often never get clear. Just after marriage the husband is earning his 9*s.* a week, and the wife with frequent children coming can probably earn nothing; but when the children get older, and the wife can go out and earn 4*s.* a week, and perhaps two boys 2*s.* 6*d.* a week each, it is their own fault if they are not comfortably enough off. It is only in a very exceptional case that a girl will go out to work, they generally go out to service very young, say 12 or 13, that is as soon as they can be trusted with a child; they go then to live entirely at the farm-house. It is a good thing that they leave the crowded cottages so young. As a rule boys live on at home, making money for the family, until they marry, which they generally do very young. Sometimes, however, they leave home and go away to some other parish, where they are taken into somebody's cottage as lodgers.

Mr. Poole is very strong on the subject of improper cottage accommodation; he says, it will soon be a problem how men are to live on such low wages, and yet in a cottage suitable for family habitation. No one can make cottage property pay without asking a far higher rent than the tenant can afford. Crowding in cottages is the source of all the immodesty and immorality in country parishes; a large family of boys and girls, huddled up in one room, even if nothing worse comes of it, must see a great deal they had better not. The worst part of it is that the lodgers often sleep in the same rooms as the daughters of the family. Some of the cottages in Watchet are very bad, but as to most open parishes, the Union Chargeability Act has been of great benefit; formerly cottages were pulled down in the close parishes near, when of course the worst characters were turned out, and they came and settled themselves in Watchet, and such like large parishes. But that is changed now, and there is a growing feeling everywhere besides, that it is right to have a sufficient number of cottages on the farms for the supply of labour required, so that the labourer may not have a long walk to and from his work.

It is the parents who wish the children to go out so young, not the farmers.

4. *Rev. J. Warren*, Dunster, has been here only nine months. Was in Hampshire before. Thinks that though actually money wages here are so low, the people are better off than they are in Hampshire, they have so many privileges and food is cheaper.

5. — *Ponsford, Esq.*, Bardon, Williton, agent to G. Luttrell, Esq.—Is an advocate for free trade in cottages, that is, would like to have all cottage tenants hold directly of the proprietor, not of the occupier; for he thinks that the farmers have too great a hold over the labourer, if he hires his cottage of him; and in some cases, if not liberal-minded, the farmer will grind down the labourer. The late Colonel Luttrell held this same opinion, and would have wished, if possible, all the labourers on his estate to hold directly of himself; the present proprietor too is fortunately much of the same opinion, though inclined to let two cottages with the farms, with the idea of one being provided for the carter, the other for the shepherd.

Always tells Mr. Luttrell, he must expect to lose by cottage property; no man can be liberal as regards such property, and yet make a profit out of it. Yet in a man of large landed property he looks upon owning such possessions as fulfilling a duty. For instance, the other day induced Mr. Luttrell to buy some cottages that were for sale in Dunster, let at that time by the outgoing proprietor at a much higher rent than he could ever suggest to Mr. Luttrell to ask. Of these cottages two were valued at 5*l.* yearly, for these he gave 80*l.* or 16 years' purchase, and besides repairs that were at once called for, he thought it right to reduce the rent to 3*l.* At Minehead, on the other hand, where the cottages on the Luttrell property are considerably better than those in Dunster, he has lately had to raise the rent, some possessed of considerable accommodation having been let as low as 30*s.* per annum. All the cottages now built on the property are built with three bedrooms. Capital stone is easily procured, and they are roofed with slate found on Sir W. Trevelyan's property, Nettlecombe way.

The wages on the property vary from 7*s.* to 9*s.*, but this must not be taken as the total received by the labourer; cider is given, and there are many perquisites besides. Recollects on one occasion visiting a labourer's wife at her cottage, and finding fault with her because two of her boys were in rags. "I "cannot help it," she said, "my husband has only 7*s.* "a week."

"And how much out of that do you pay for your "cottage?—Oh, we get that rent-free from the farmer.

"That's a nice garden you have got round the "house; what do you pay for that?—We get that "rent-free too.

"Fine pig in the orchard yonder; who does he "belong to?—To us.

"What do you pay for the run of him there?—"Nothing.

"Whose bullocks are those?—Farmer ——'s, as "my good man works for.

"Who minds them?—My good man.

"And he gets something for that?—One shilling a "week.

"Does he get any cider?—Three pints a day."

All of which added together very nearly doubles his wages.

The cottage question is the great question with labourers. You must make his home comfortable and then he will return to it after work. If he has a wretched cottage, what more natural than that he should prefer to go to the public-house, where he will find a warm room and cheerful fire? but if he has a comfortable home of his own, he will always come back.

The great farmer in Williton employs seven or eight females, of whom some are married, some big strong girls. It is not at all an uncommon thing for girls about here to go to work, picking and cutting turnips and mangolds. If they do not go into service they usually take to dress-making, which they begin at 10 or 11 years old; those who go to service usually go at 11 or 12. These two occupations pretty well divide the younger girls. As a rule the worst class are those who take to dress-making. A great part come to grief; of those who go to service a good many perhaps will come back and take a turn in the fields; it does not deteriorate them; but many of those who have had a misfortune come back, and if there is difficulty about getting another place, will take a turn at field labour.

6. *Mr. John Birmingham*, steward to Sir Thomas Acland, Selworthy.—On a farm of 200 acres in the Porlock valley a farmer employs perhaps four men and two boys about 15, perhaps one younger boy to work about the farm, such as minding pigs, &c. In bird-keeping time one or more younger boys are hired on the job for perhaps three months; the age for that employment is from 8 to 10, after which a boy generally gets regular work. A little girl is employed as often in bird-keeping as a boy. They are paid 4*d.* a day, 2*s.* 4*d.* a week. The schools are pretty well attended from Michaelmas to Lady-day; after that the parents like to get the children out to work. In this district there is another and peculiar employment, the "whort harvest," which takes nearly every woman and child in the country out for some weeks in the summer to gather whortleberries on the mountains. Very few girls work out, perhaps one or two in a parish, and those generally who are fit for nothing else. They generally go out to service at 14 or 15; but perhaps a girl, who has been badly brought up, is not liked by her employers, and comes home; being then unable to take to anything else, she works out in the fields.

Among the women it is chiefly the labourers' wives who work out; the farmer expects a labourer's wife to do so, if she is able-bodied. Their standard wages are 8*d.* a day, and they generally work on an average three days a week. They make hay, clean turnips and mangold, and pick the smaller turnips; there is no hoeing. They work from 8 a.m. to 6 p.m., with two breaks, one from 10 a.m. to 10.30 for luncheon, and from 12.30 to 1.30 for dinner. If near home they go home to meals. Would not wish to restrain women working in the fields. A boy is not much use till he is 13 years old, the farmers do not care about having them younger; it is the parents who wish them to go to work.

The men's wages on Sir Thomas Acland's property are 10*s.* a week, and no cider given. He also gives no perquisites, except that he allows wood-firing nearly all over the valley at a very cheap rate—100 fagots for 2*s.* 6*d.* 200 fagots would last the whole winter. They have to pay for haulage themselves. They have to pay for cottages at the rate of 2*l.* 4*s.* a year, for a cottage with three bed-rooms and wash-house. A tradesman, if he hires one of the same cottages, pays 3*l.* a year. Mr. Isaac Clarke, miller, gives the same wages. Mr. Edmund Clarke, 8*s.*, cider, and grist corn. This latter is the average wage in the valley, if a farmer gives corn and cider, but some give 7*s.*; generally, however, to a man scarcely able-bodied, whose work being of less value, naturally is left to one of the smaller and poorer farmers, who cannot pay so much for it. Out of this they have to pay for a cottage. Pork is almost the only meat eaten; sometimes, however, in the winter, when the farmers kill a sheep, they let the labourers have some of it at 6*d.* a pound, and the mutton so obtained is generally made into broth. Sir Thomas also gives a good deal of broth and arrowroot. There is not a valley in a hundred so well off.

The cottages are generally good, and so too are the gardens. Forty yards of allotment are given at 4*d.* per yard, Sir Thomas paying fencing and rates and taxes. All the old cottages have two bed-rooms, the new are built with three. We have put up six in the last two years. The cost of putting up two good cottages, exclusive of the purchase of timber, which is provided on the estate, is 200*l.* For this we build in each three bed-rooms, with a fireplace in one, a kitchen, pantry, and wash-house, and generally a lobby for tools, &c. They are built of stone, of which there is abundance at hand, and thatched, thatch being a matter of taste. Native slate is 4*s.* a square (10 feet by 10 feet) dearer than thatch, but Bridgwater tile can be delivered on the spot cheaper than thatch. We have not above four cottages with only one bed-room in the whole district. Have only two cottages in Porlock.

No lodgers are allowed unless under special agreement, and in no case allowed when there is a family.

There is no public-house in the district, and consequently a good deal of cider is sold clandestinely. Would almost rather have a public-house than such a system. Most of the labourers prefer having cider to money. It is not an unwholesome drink, except in excess; it is bad to drink more than three pints a day. Most men drink two quarts a day. The value of a pint is about one penny.

The ventilation in the cottages is generally good. Two or three years ago there was a threat of cholera, so went himself all over the cottages, and had casements put in where necessary.

In the hill country the cottages are not so good, but the people are quite as well off. Land is not made so much of there, and it is easy to get a good bit of garden or potato ground. There are more perquisites given too.

In the valley masons receive 2*s.* 4*d.* a day, which is also the regular pay for carpenters, &c. Some old men have their cottages at 1*l.* a week.

7. *Mr. George Tuckett*, Sir Alexander Hood's bailiff, St. Audries.—The wages on the home farm are 11*s.*; giving higher wages we are able to have all our labourers able-bodied men. We give besides three pints of cider, or 1*s.* as a substitute, but they prefer cider—all prefer cider. If 1*s.* 6*d.* were offered instead of cider, they would still prefer cider. They pay rent for their cottage out of their wages; most have allotments, 20 yards for 6*s.* In the parishes of St. Decumans (Watchet and Williton) and Sampford Brett, wages are 9*s.* to 10*s.*; generally 9*s.* with cider, or 10*s.* without. Out of this they pay for a cottage, generally from 1*s.* a week, 2*l.* 12*s.* a year up to 4*l.* a year. All have gardens, most have pigsties, and some have allotments. Some few farmers give grist corn at 6*s.* a bushel all the year round. The other farmers in this parish (West Quantockshead) give very little lower wages than we give; perhaps 10*s.*

Women are not much employed in the neighbourhood, perhaps three women on a farm of 300 acres. Farmers rather expect a labourer's wife to go out in busy times, such as weeding corn and clearing turnips. There is not much weeding, however. They are generally paid 8*d.* to 10*d.* a day. We only employ women a few months in the year, in cutting mangolds, cleaning turnips, &c. We pay them 10*d.* a day, and 1*s.* a day for haymaking. Very few girls go out to work in the fields; some go to service.

The youngest boy at work on the farm is 12 years of age. He gets 7*d.* a day. We have two other boys at work, one receiving 13*d.* another 14*d.* The general pay of a boy in the neighbourhood is 8*d.* to 1*s.* We employ two old men at 1*s.* 6*d.* a day.

Somersetshire.

Mr. Boyle.

k.

There is a great deal of piece-work done now, which farmers and labourers both like better; on this system turnip-hoeing, hedging, mowing, and harvesting are always done. The price given for cutting grass is 3*s.* an acre, and a man can cut in a day from an acre and a quarter to an acre and a half. The price given for cutting corn is 8*s.* an acre, with allowances, a peck of cider; for this price it is to be cut and bound. All this work is done by men; three men go out together, and by division of labour can cut and bind from an acre and a half to two acres in a day, unless the corn is much laid, when of course the process is slower. They work 14 or 15 hours a day. A peck of cider is eight quarts; thus if three men cut and bind the corn from two acres in a day, they have an allowance of 16 quarts, or four gallons of cider between them.

It is a very good cider county; the cultivated land rather more pasture than arable.

All the cottages in the parish are good. Sir Alexander Hood has just put up some new brick cottages by contract. It is rather more expensive here to build in brick than in stone. The brick comes from Bridgwater, and the red tiles also; red tiles are rather more expensive than slate tiles. A pair of cottages can be put up in brick and red tile for 300*l.* For this the rent Sir Alexander asks is 4*l.*, or about $2\frac{1}{2}$ per cent.

They are now cultivating a great deal of Brendon, mostly Mr. Lethbridge's property. It is a very wet climate, and will not grow wheat, but does very well for grass and green crops and oats. The Quantocks, which lie just at the back of St. Audries, are drier, but will not grow wheat, though well adapted for oats and barley; they are good for green crops. All the summit is open moor with heather, except where there is oak copse towards Over Stowey. Exmoor sheep and ponies have the run of it, and there are still a few red-deer in Lord Taunton's woods. Certain people have the right of putting stock on, but it is not very profitable. Sheep are not worth so much, when they come down again, as when put on; they are kept there little except in summer. Ponies remain all the year round. Sir Alexander Hood has some Shetland ponies there, which are in a thriving condition.

8. *Isaac Clarke, Esq.*, Selworthy, has land of his own, and occupies some more belonging to Sir Thomas Acland.—The cultivation of the parish is chiefly arable. Women are employed on an average for three days a week, their usual time of work about eight hours a day. In this parish itself there are no girls employed, but it would be desirable to place some restriction on their employment where they are employed. Boys begin to work at 10 years of age, and from that time work all the year round. It is rather too young; it would be better to place some restriction on the age at which they began, say 12 years. There is a good day school both for boys and girls, and they take advantage of it.

"The cottages are generally good, but some of them are, in my opinion, much too small; they are sufficient for the supply of the labour required, and they are conveniently situated. I am afraid some of the smaller ones are overcrowded. They have good gardens, and also allotments of land conveniently situate."

9. *Samuel Norrish*, occupier, Duddings Farm, Timberscombe, and churchwarden.—The cultivation of the parish is mixed—wheat, barley, oats, turnips, mangold, clover; about one-third of the acreage is meadow, pasture, and orchard; two-thirds arable. Boys are very generally employed from the age of 11, but no girls. Would like no boys to be allowed to work before 12, and think that no young females should be employed in the fields at all. As a rule the poor people send their children up to the age of 11; when the children do not attend it arises from indifference on the part of the parents. Schooling is well provided, for there is an endowed school free from all payments. As regards women, about five per cent. of the population are employed. (The population of the parish is 434, which gives 22 women out at work in the fields.) Their hours of work are from 8 a.m. to 5.30 p.m., with an interval of an hour at dinner.

In number the cottages are sufficient, and they are conveniently placed; one-fourth of them are in a bad condition, but, with one or two exceptions, they are not overcrowded; they are well supplied with water and ventilated. Gardens are attached to all cottages, with two or three exceptions.

10. *Mr. Risdon*, occupier, Timberscombe, holds 300 acres under Mr. Hole.—Boys generally begin to work at 12. Has two boys keeping birds at this present time, aged about 12 or 13. Employs in regular work two carter boys, and one about the yard. All are supposed to go to school, but the fact is they do not really. There is an endowed school at which the schoolmaster gets over 100*l.* a year, and the parson gets little more than that. There is also a little chapel school, where most children go in preference to the other. Employs no girls. As a rule in this district there are not above two or three employed in a parish. As soon as they are old enough, 15 or 16, they go out to service.

Likes a few women on the farm; in the summer is obliged to have them. Rather expects his labourers' wives to go out in the busy times. About half the women in the village go out, but not for regular work, they are employed for the job. Does not like having them about the steam-engine.

Reckons that a labourer costs his employer about 30*l.* a year. Gives a man 1*s.* a day, *i. e.*, 6*s.* a week, and a quart of cider, valued at 2*d.*, which is 1*s.* extra; also a cottage and garden, and a quarter of an acre of potato ground; grist corn at 6*s.* a bushel all the year round; the run of a pig on a bit of grass, generally in an orchard. Gives also a good deal of task-work, which he prefers, and which the men prefer. They make at it 1*s.* 10*d.*, 1*s.* 11*d.*, or 2*s.* a day for a few days at a time, at such work as hedging. In hay-making time they work 16 hours, 5 a.m. to 9 p.m., and count it a day and a half. In harvesting everybody goes out, the labourers' wives especially; 4*s.* 6*d.* to 5*s.* is given for cutting an acre. At this time a man can earn for a fortnight 3*s.* to 4*s.* a day, and a woman 1*s.* 6*d.* to 2*s.* The ordinary men's hours of work are from 7 a.m. to 5 p.m.; the women begin an hour later, and leave off at the same time. Mr. Hole gives the same wages. Mr. Risdon's father offered his men 1*s.* 8*d.* a day if they would give up all perquisites, but they preferred adhering to the old system. If the people now want more than he gives, Mr. Risdon offers the 1*s.* 8*d.* like his father, but they prefer the old system, and he does not find that they leave him. His farm is mostly grazing; he has two fields of very fine meadow in the valley, but the rest of the farm is on the slope of the hills. Has 15 acres of orchard, out of which alone his father used to pay the rent, but the trees are getting old now.

There is no necessity to put any restriction on the employment of women in agriculture; they do not come out half enough. As for the boys, if there is a good school, would have them kept there till they are 13 years of age.

11. *John King, Esq.*, Cutcombe, farms 400 acres, under Mr. Bouverie, up in the hill country. (The turnpike at Cutcombe on the Dunster and Dulverton road is exactly 1,000 feet above the sea.)—Employs only two boys, of whom the youngest is 12 years of age, the other older. This is rather fewer than the usual number of boys employed; would put the average number at one boy per 100 acres. Few are worked younger than 12, except perhaps on a job, such as bird-keeping for a time. Has six labourers in his employment, the wives of three of whom work in the fields; the wives of the others never do, and reckons that those who work out have the best and tidiest cottages, and have the best character. Young women will not work out, it is the older ones who have been always accustomed to it. Mr. King gives as his regular wages 8*s.* to labourers, and a cottage; also grist corn. He gives no cider, it is not the custom to give it in this parish; it is not a cider country. One or two farmers in the village give 7*s.*, but it is the exception.

12. *Mr. George Risdon*, Higher Marsh, Dunster, farms 210 acres, under Mr. Luttrell, more than half of

which is grass.—Has one small boy employed out at present; he is keeping birds, and is 9 years of age. He only comes on the job. He never went much to school, but he goes now to night-school. Most of the workmen's wives go into the fields at busy times, such as haymaking, harvest, hoeing turnips, weeding corn. All their work is task-work, at which they can make a good deal; for instance gives 5*s.* the acre for hoeing, and a woman might hoe an acre in two days. The men work in summer from 6 a.m. to 5 p.m., with an hour for dinner out of it; in winter they do not begin till 7.30 a.m. The boys work the same hours as the men. The women do not begin work till 8 a.m.

The regular labourers' wages in money are 8*s.*; a carter gets 10*s.* Besides this there are the usual perquisites, such as three pints a day cider; but sometimes in winter, when it has not been a good season, and cider is short, gives three halfpence a pint instead of liquor. Does not give cottage; has only three on the farm, and eight men employed. Those who take one of his cottages pay 1*s.* a week, but those who live elsewhere have only half a mile to come. They get also half their firing, and grist corn at 6*s.* a bushel, all the year round, which of course is a great advantage when the price of corn is above that; if it is under they have no occasion to buy it of the farmer, they can go elsewhere and get it cheaper. If they require barley for their pigs, lets them have it at 4*s.* a bushel, but only allows them to keep one pig. For the run of a pig they pay 3*d.* a month. Gives potato ground, for which they profess to pay, but generally it ends in being given. Would rather give 11*s.* a week than 8*s.* and so many perquisites.

13. *Mr. Badcock*, Dunster, farms 220 acres, of which three-fourths are grazing.—Has in his employ two boys under 15, both over 12. They are regularly employed. If they come to work they are always paid, however bad a day it is. Has children bird-keeping on the job sometimes; for instance at present has a little girl of 11 out keeping birds, but only for a few weeks. Has two women in his employ at present, who come when wanted; they are assisting in the thrashing machine to-day. They are both labourers' wives. In the harvesting four or five women are employed, and they are labourers' daughters as well as wives; often unmarried. But, except in harvest, very few unmarried women work. Farm servants will sometimes leave service and come out for a lark in the summer, perhaps for a week or two. Such girls are not always the best of characters; a steady girl will stick to her place. Has cottages on his farm. None of his labourers come from Dunster or Carhampton. Mr. Luttrell's farms well provided with cottages, all but two have cottages on them; but some farms in the neighbourhood under another proprietor have no cottages, which is a bad system. Have to give 2*d.* a day more to Carhampton men than to those who live on the farm (Carhampton is two miles distant), because they have some way to come, and do not get work done with so much spirit.

Gives a carter 11*s.* and nothing more; a labourer 9*s.* and three pints of cider daily. They prefer cider to 1*s.* more, which has been offered to them. They would take 1*s.* 6*d.* in lieu of cider. Gives no privileges, except perhaps now and then a little wood or a few turnips. The men may take a few turnips and greens if they ask for them, but if too many go, gives a hint to that effect, and it soon stops. Thinks privileges are a bad plan; giving them is a custom that is going out much here. Many young farmers give no grist corn to new hands, but go on giving it to the old hands, who have been accustomed to it, as they do not like to take it away from those who have had it hitherto.

14. *Mr. Gibbs*, Carhampton, occupies a house in the village. Employs three women as a general rule, four in the summer. Of these, oddly enough, two are mason's wives. Masons get far better wages than labourers in summer time, when work is plentiful, but in winter, when it is light, their wives are glad enough to get a job. Labourers' wives do not work out much, but are willing to do so in busy times. All who work on this farm are very respectable, and should say that such is the rule all about this country. They are paid 8*d.* a day and a little cider. They go home to dinner, for which they are allowed one hour in the middle of the day. The farm is close to the village, and all live in the village. Their hours of work are 8 a.m. to 5 p.m. Young girls work a little now and then. The only other occupation for them is to go to the sea and gather laver. Most, however, go to school till 14, and then go out to service. None employed at present on the farm. Has four boys employed on the farm in ages varying from 12 to 17; none under 12 at present, as it happens. Generally they begin at 10. Boys under that age sometimes go out bird-keeping, generally not alone; they will take a companion, and sometimes do a good deal of damage playing about and breaking down hedges. This especially on Sunday, when there are more of the other children about. Must keep birds on Sunday as well as other days. Very idle about it. One boy went away and told Mr. —— he was obliged to go away, because the birds troubled him so. The school is not very good. Mr. Gibbs's nephew kept a night school, and brought on the boys very much. When he gave it up Mr. Windsor, who lives with Mr. Gibbs, kept it on, but he too had to give it up this year, as he had too much else to do. The attendance averaged 15 to 20 boys; they paid a trifle entrance, and seemed very anxious to learn.

Gives carter and shepherd 10*s.* a week and three pints of cider; gives a labourer 9*s.* a week, and sometimes 2*s.* a day; to older men 8*s.* 6*d.* a week, and to one old man, who cannot do much, 7*s.* They have three pints of cider apiece also, and a little ground let at a reasonable price for potato ground; a quarter of an acre is let among four at the rate of 30*s.* an acre. They live mostly in the village, and pay for their cottage out of their wages, 1*s.* to 1*s.* 6*d.* a week.

An agricultural meeting at Williton the other day fixed on 9 as the age at which boys ought to begin field-work.

15. *Mr. Harding*, bailiff to Mrs. Farthing, Manor farm, Dodington.—Employs only two women, and them only for six months in the year. Gives them 8*d.* a day. Women not much worked, as farm principally dairy and grazing. Has six boys employed, one of 10 and one of 13. There is a little boy employed all the year round in bird-keeping and light jobs, at 2*s.* 6*d.* a week regular wages, and something extra in summer. Always makes a point of finding work for men, women, and boys, if they come, however wet the weather is; there is always something to be done in the sheds, or under cover somewhere. Does all the work that is possible to be so done by task-work. Keeps four men on regularly as task-men, at such work as hedging and hoeing. For 10 months in the year they can each earn as much as 12*s.* or 13*s.* a week. Besides this he has three or four others employed about the stock. Herdsmen receive 11*s.* a week and three pints of cider; shepherds the same, and are given meat during the lambing season. Carters receive 10*s.* and cider, and are given extras in the haymaking and harvest, that bring up their wages for that time to little short of 1*l.* a week. They get seven pints of cider, while haymaking and harvest last, daily, and meat once a day. They work from 5 a.m. to 9 p.m., but, as it is by task-work, it is their object to make the day as long as possible. Does not give cottages, but has five on the farm, which are let with a garden at 1*s.* a week. Has one new one on the hill, built by Sir Peregrine Acland, his landlord, which is let to him with the farm, and for which he charges 1*s.* 6*d.* a week. Gives no corn; if men ask for any, always sends them to the mill to buy it at the current price. Does not give firing regularly, but lets men, engaged in pulling down a hedge, appropriate all the dead wood. Allows a labourer to keep a pig in his own (the farmer's) sties.

16. *Mr. Oatway*, Withycombe, also occupies 240 acres under Mr. Luttrell.—The first regular work boys do is driving horses, but few begin to do that under 12 years of age; what work they do when

Somersetshire.
Mr. Boyle.
k.

younger consists in bird-keeping. Women work very irregularly. April and May are the months in which they do most work, chiefly weeding. All years when turnips are plenty, not like this year, they can earn a good deal of money cutting turnips, sometimes 1*s.* a day, often more. Gives a shepherd 10*s.* a week, a carter 9*s.*, an ordinary labourer 8*s.* Besides this they get three pints of cider daily, and potato ground, and grist corn. No cottage, they have to pay for that out of their wages. Gives a great deal of task-work, which he prefers giving. At this present time, when land is being much improved, cutting down hedges, and draining going on, there is a good deal of work that is better done by task. At hedging or draining men earn from 2*s.* to 2*s.* 3*d.* a day; in harvest time they can earn as much as 4*s.* or 5*s.* Surprised to hear how low Risdon of Timberscombe's wages are; his labourers have the reputation of being better off than any in the neighbourhood.

17. *Mr. Kedner*, Monksilver, vice-chairman of the Board of Guardians, occupier.—A good man expects 9*s.* Out of this he has to pay for his cottage a moderate rent, 30*s.* to 2*l.* per annum. Cider is given. The carter and the shepherd get their houses frees. As a rule the cottages are not good, but they are conveniently situate for the farms. Mr. Notley is the principal proprietor. Very few cottages have more than one bed-room, and there are some very long families; mentioned especially the case of a sawyer, with a large family, and but one bed-room for all. Sometimes there are as many as seven or eight sleeping in one room. As a rule they are in pretty good repair; want of size is all there is to be complained of; some are copyhold, and these are always the worst. The farms in the parish are from 100 to 200 acres in extent. There are a few cottages on the farms, and the labourers who have the luck to have them are always the best off.

18. *Mr. Chas. Dibble*, occupier, Clatworthy, gives 8*s.* a week, and a house with a very good garden; gives some cider, but not given generally in the parish; gives turnips, and grist corn at 6*s.* a bushel, also run of a pig in one of the fields, either in pasture or orchard. This is a custom not as general as it used to be; it used to be a very general custom for the pig to have to pick up what he could get in the road. Boys go to work early; they generally leave school at 8 or 9, and are taken to live on the farms; most of them have been to school before. They then get regular employment for most of the year, such as weeding, &c.

19. *Mr. Lethbridge*, occupier Bicknoller.—Bicknoller is a small parish under the Ecclesiastical Commissioners; was managed badly, but is being improved now. The wives of the labourers work nearly all the year round, but no other women work. This has been a bad year for them, owing to the failure of the turnips. Boys go to work young; say at 10. The women are obliged to send them as soon as they can earn anything, so as to help out their own and their husbands' wages. One mother told the clergyman the other day, when he remonstrated with her about not sending her boy to school, that if he would pay what he could have made by working while at school, she would send him. Gives 9*s.* regular wages, generally gives a house; if not the labourer can get one for 1*s.*, sometimes as low as 6*d.* Besides this he has a quart of cider; once offered 1*s.* 6*d.* a week instead of cider, but labourers as a rule prefer cider; potato ground given too, at 6*d.* a yard.

20. *Mr. Corner*, Sampford Brett, occupier, farms 600 acres under Sir Alexander Hood, and has a farm of 500 more near Bath, under the Prince of Wales.—Gives more employment to women than most farmers in the neighbourhood, it is the cheapest kind of labour you can get. You can get them to work here; all through this country they work a great deal, but on the Bath farm, you cannot get them to work at all. They get 9*d.* ordinarily, in harvest, 14*d.* The work is digging turnips, or thistles, helping threshing, &c. Used to have a first-rate lot of women, but all the old lot are gone away now; some were married, some were not. One married and then went away. Had two first-rate women, but they transgressed; one who came to work for many years had three illegitimate children. Has only three in constant work now, of whom one is a widow, one a married woman, the other unmarried, but is 35 years of age, and deaf and dumb.

The youngest boy he has employed is 10 years of age, and they run up to 16. They work all the year round; there is always something or other for them to do. Besides these there are the bird-keeping boys, "who are taken away from school for a short time "by their parents to oblige me." They begin at 2*s.* a week, and go on up to 4*s.*

Gives his shepherd 11*s.* 6*d.* a week; one of his carters 12*s.*, and the other and the herdsman 11*s.* each; a labourer receives 10*s.* a week. No cider given. Wages are paid, whether they are wanted or not; there is generally something for them to do. In the way of perquisites, gives anything that is wanted in the way of turnips, straw, &c. At his farm near Bath he gives 12*s.*, and no perquisites at all, and reckons his men better off at Sampford Brett than they are there. One who went up to the Bath farm, with an idea of bettering himself, chose to come back again. He has only three cottages on his farm at Sampford, of which he lets one for 1*s.* to a labourer; he gives one free to a shepherd, and the other to the man who looks after the bullocks. If there is a good feeling between the landlord and farmer, it is very good to have the labourer hold his cottage directly of the landlord, if there is not such feeling, the case is very different.

21. —*Lutley, Esq.*, Kilton, occupies a farm under Mr. Luttrell; has practised as a physician.—Occasionally employs a small boy for bird-keeping, would not employ a little girl; does not think it fit work for them. Very seldom has a woman employed, as a rule; thinks it makes a woman rough, still it does good to health in some cases.

Wages get higher as you get further east. Gives himself 10*s.* and a cottage worth 5*l.* a year; has two very good ones, with four bed-rooms in one, and three in the other; they belong to Mr. Luttrell. Gives wheat at 6*s.* a bushel, and three pints of cider, which is rather more than is given in the neighbourhood; does haulage for his people, and gives a bit of mutton now and then. Gives a good deal of piecework, such as in cutting corn and grass, hedging, and making out reed for thatching. Reckons his men cost him on an average 15*s.* a week. Offered once the same wages as Sir Peregrine Acland gives, and no perquisites, but found that the men preferred the old system. Gives high wages, in order to keep his men honest, but does not believe all the same that he gets any more work done than others.

22. *Mr. Southcombe*, Stringston, occupier, gives his carter 10*s.* a week, and cider; his labourers 9*s.* a week and cider. Does not give a cottage; can rent a cottage for 1*s.* a week.

23. *Thomas Hill*, confidential man and shepherd to George Tuckett, St. Audries.—Came down to work here from Cutcombe, where he was 16 years with Mr. Oatway. Was never so well off as he was at Cutcombe; had two fat pigs, 11 or 12 score each.

24. *Jane Winter*, farm servant.—Was born and brought up at Cutcombe. Father got 7*s.* a week, mother 8*d.* a day; and had to pay for cottage. No cider given, or other privileges; a farmer never lets his labourers run a pig in an orchard; the people at Cutcombe joined to hire a bit of waste by the side of the road, and paid for it to run their pigs. Self and brothers and sisters were brought up very hardy; mother always made a point of sending us to school, but were very often sent out to play between school-times instead of having our dinners, as there was nothing for us to eat.

25. *Thomas Pearse*, aged 11, very ragged, from Carhampton.—Was keeping birds, which he manages to do by hallooing; birds go and settle elsewhere; follows them and halloos again; his sister with him, aged 13, was not employed, but had come out with

his dinner, and was staying with him. (They were loitering about the road, and did not seem to be doing much.)

26. *Mrs. Cook*, Porlock.—Husband works for Mr. Norton, has been ill for some time. Eldest boy, nearly 12 years of age, works for Mr. Rawle; was brought up to dress-making herself, never goes out to work in the fields, except in the summer, when she goes binding while her husband reaps. Has seven children, all at home, the boy is the eldest, the eldest girl is 8 years old. Cannot afford to go out to work, has so many children, must stay and look after them. Has only this room and the one above it; not much room for so many; pays 1*s.* 3*d.* rent for the cottage. (Seemed a respectable women and nice children, all seven were at home, the eldest boy just come in from work, the youngest a baby. They were at dinner off broth and bread; the broth looked weak and watery, but was not tea-kettle broth.)

27. Cottages at Porlock, visited with Rev. E. Yarde.

Mrs. Cook's cottage, only two rooms, family, husband, wife, and seven children, with only one bed-room. (See above.) Cottage next door, the same size, but vacant now, as one side of the wall had been blown down, and showed the interior sufficiently; it consisted of only two rooms, one above and one below, and the windows were too small to give proper ventilation. Mrs. Stoate's cottages were of the same size, both of them empty when visited. Out of one them a husband, wife, and three children had just been turned. Most of the cottages in the village bore rather a miserable appearance, especially in Castle Street, and few had more than two bed-rooms; most however are built of stone, which is very plentiful, and roofed with thatch.

28. Cottages at Dunster, visited Feb. 10, 1869.

(1.) *George Lang*, labourer; one room downstairs, and a small back-house, and two upstairs; family, husband, wife, and four children; rent 3*l.* 10*s.*

(2.) *James Lang*, pig-killer, and of irregular work. Two good rooms downstairs, and two good over them lives in a bit of the old workhouse that was divided into cottages. Family consists of husband, wife, two daughters, and grandmother. Has a small garden at the back.

(3.) *Wm. Lang*, mason and parish clerk. Two good rooms downstairs, and three upstairs, with garden at back. Rent 4*l.* Family, husband, wife, and three children. One lodger.

(4.) —— *Penny*, miller. Has one good room downstairs, and two above it; no garden. Family, husband, wife, and four or five children. Rent 5*l.*

(5.) *Wm. Davey*, carter. Two good rooms downstairs, and two above; large roomy thatched house close by the river, down to which an excellent garden runs. House not quite high enough above the river, which sometimes comes up to the door. Rent 4*l.* Family, husband, wife, and three children, of whom one a daughter at home with a broken finger, also small child, a love-child, child of the daughter.

(6.) *Joan Tucker*, and her son, a labourer. Has one room downstairs, and small entrance room, and two rooms above; small garden. Only inhabited by mother, son, and grand-daughter. Rent 3*l.* 10*s.* or 4*l.*

(7.) — *Gill.* Very bad cottage, one room above, one below. Rent 3*l.* Family, husband, a labourer, wife, who goes out to work in the fields, and was out when we came; a son also out at work, and a daughter about 15 or 16, and very untidy, who was at home taking care of her blind grandmother. In all five persons in cottage. No garden.

(8.) — *Michell*, labourer. Two rooms upstairs, one below. Entered by the same door as cottage just preceding, and has same staircase. Very bad cottage, rent 3*l.* 10*s.* Family, husband, wife, son, and a lodger (young man); a child ill with measles lying on settee, daughter of a daughter of the occupier, who lives opposite with a large young family.

(9.) — *Osmard*, labourer, married daughter of occupier of cottage next preceding; has one room above, one below, and no garden. Rent, 3*l.* 10*s.* or 4*l.* Family, husband, wife, four children.

(10.) — *Court*, machine-wright. Has a wretched looking house, nearly bare of furniture. Drinks. One room above, one below; no garden. Rent, 3*l.* 10*s.* or 4*l.* Family, husband, wife in rags, five or six children, all at home.

29. Sir Alexander Hood's cottages.

Extract from journal, Feb. 13, 1869.—Went to see some of Sir Alexander Hood's cottages; all have three bedrooms. He showed me a pair that had been adapted from an old farmhouse divided into two. When the farms are enlarged, some of the old farm-houses are turned into labourer's cottages. They had each three bedrooms, with a detached wash-house, and boiler between the two. Had had to put up partitions, and divide the big rooms upstairs, as the old farm-houses had generally big bedrooms, and few of them. One of the cottages had the old staircase, which was wide and airy; downstairs was a large kitchen, and another room. The other cottage had one of its bedrooms downstairs, with nothing over it, the two bedrooms upstairs being over the kitchen; close by was a very good cottage, made out of an old farm building, very clean and tidy, well kept and a good size. It had a good kitchen and pantry, and a wash-house adjoining, and three bedrooms upstairs; it had been a good sized linhay, so made a large cottage. In it lived the miller at Sir Alexander's farm, and his wife worked on Sir A.'s garden. The windows were large, and ventilators had been put in, but they were seldom used. There is generally great carelessness in cottages about airing rooms, the house door being used for the purpose oftener than the window or ventilator prepared for the purpose.

Went afterwards to see a pair of Sir Alexander's new cottages, which he built by contract, of Bridgwater brick and tile for 300*l.* the pair, and lets for 4*l.* apiece. They are exactly alike. The cottage into which we went had a good kitchen and a small back room, with washing apparatus, boiler, &c.; there was also a small pantry and a lobby, very narrow, and no space lost anywhere. Upstairs were three bedrooms, all opening on to the top of the stairs, one used as a dressing-room, because the family is small. It was very neat and well kept inside; outside no attempt at architectural beauty, though neat. It is Sir A.'s principle to break the roof as little as possible, as every break in it is a weak point; but what is lost in beauty is gained in strength and durability. Outside at the back a brick wall divides the premises of the two cottages; there is a tank for rain water, and a tap of spring water; at the extremity of the wall is an outbuilding, back to back with one belonging to the other cottage. These outbuildings are also built of red brick, and cost about 50*l.* or 60*l.* out of the 300*l.* They consist each of a store-room, and a privy, with a separate door to the outer on the further side from the cottage. There is a cesspool on the left-hand side, which opens with a stone trap. Each cottage has a good vegetable garden between it and the road, from which it stands back, and also behind.

Feb. 14. Extract from journal.—Visited with Sir Alexander Hood two cottages in Stringston, which he has converted from their old shape. They were just finished, and seemed comfortable; but the people who had been put into one temporarily, while their own cottage was being repaired, asked, if when the repairs in the old one were finished, they might go back to it, as it was more roomy; their old cottage which was close by was thatched, and looked half fallen down. Repairs were going on. The new cottage, in which we saw them, had been entirely re-done, had three bedrooms, and was roofed with tiles.

Feb. 15. Extract from journal.—Visited with Sir Alexander Hood some of his new cottages in Sampford Brett. He has varied these by making a passage right through from the front to the back, which makes

Somersetshire.

Mr. Boyle.

k.

them more airy, and by putting the boiler inside. Prefers having the boiler outside, however, as it is a bad thing, whenever it is used, to fill a small house with steam.

30. *Rev. J. M. King*, vicar of Cutcombe.—The parish has an area of about 1,120 acres of green ground, part water-meadow, part old pasture; and 5,811 enclosed acres, under the five-course system, *i.e.*, corn, roots, corn, grass, grass. Boys are employed regularly from about 10 years of age; previous to that occasionally, in keeping the birds off new-sown ground. No legislation is advisable in their case. "Girls may be said to be never so employed; women "are regularly employed, if they choose to work, and "farmers much prefer the labourers whose wives "do so. The practice is, however, going out, much, "I think, to the detriment of the women themselves "and their families. I am very positive on this point. "Restriction on the employment of the young women "may, I think, be necessary, but I have never had to "deal with such cases." Women's work is always close at hand; they work 8 hours a day. 8 a.m. to 12, then go to dinner, and work again 1.30 p.m. till 5 p.m.

"The condition of the cottages varies from new "and good to old and wretched; most have gardens "if not all; the supply of water is better than the "ventilation." The turnpike is a disgrace; will tell the highway board that the Commissioner's attention was attracted. Only one old woman lives there; she begged not to have it pulled down, so they put it in order for her. The ragged children seen there were her grandchildren, who live elsewhere. The cottages are not commonly overcrowded, but there is not a proper division of the sexes: immorality exists, but not to a great extent, and I do not consider that it arises from overcrowding.

"Having had a very long and intimate acquaintance "with the habits of the labourers, I think I am able "to speak with some degree of accuracy. The prin- "cipal immorality exists among young people about "to be married, who think there is neither guilt "nor shame in such conduct; we, the clergy, are "powerless till the masters and mistresses will take "it up, and show their condemnation by positive "marks of displeasure. When marriage is not con- "templated, as in the case of girls at service, "employers ought not to permit the parents to "receive the girl at home, and then take her again as "if nothing was wrong, the parents taking her child. "Much might be done by one strict rule imposed "upon occupiers by owners of land:—No illegiti- "mate children to be born or reside in any cottage "on my property." The farmers will all take the girl back again as if nothing had happened.

So little harm do they see in this form of immorality that they will quote Scripture against you in their favour. "Let them do what they like. They sin not; let them marry." Mr. King's predecessor, 34 years ago, offered a new dress to every woman not married pregnant, and it was only claimed once. The wife of a clergyman at a neighbouring parish offered to fit out the bedroom, with wash-hand stand, dressing table, &c., in every new establishment where the woman was not married pregnant. She thought she had found a case at last and fitted out the rooms accordingly; but only two months after the marriage almost the first use the basin was put to, was to christen a baby.

There is not a child who cannot read and write in the parish. There is an endowed school, and full advantage is taken of it. It was endowed by a gentleman to whom Timberscombe belonged, and Mr. King himself was formerly a trustee, but the trustees are now over-ridden by the Charity Commissioners. Besides the endowed school Mr. King has a school of his own in an outlying district. He has one boy who came back at 14 after doing field-work, from a wish to get more schooling. Miss King has a class of boys and young men on Sunday, which they attend and well, but no such school would be attended, unless taught by a lady; lads of 22 come. She has also a Sunday class for the older girls.

31. *Rev. Cyril Wood*, vicar of Stogursey or Stoke Courcy (area 6,000 acres, population about 1,500, cultivation mixed).—Impossible to answer statistics accurately about the number of women and children employed in field labour. In the spring the work is agricultural, weeding, ploughing, &c., in summer haymaking; children and young persons (males) are employed in harvest; women take little part except gleaning; if they do work then it is chiefly in putting the sheaves into stacks. Their usual hours of work are 7 a.m. to 6 p.m., with an interval of 30 minutes for breakfast, 60 for dinner; the journey to work being included in the hours of work. A few live at some distance, but say an average of three-quarters of a mile. They do not work hard enough to hurt themselves, and never heard of any ill treatment; must have heard had such existed as an acknowledged custom. Is not in favour of any restriction on boys' labour; the supposed evil rights itself; boys are of no use unless physically qualified to be of use; would not recommend any restriction on children and young persons working, but they ought to attend the Sunday and night schools.

Would not restrict female labour. "My observa- "tions in Stogursey lead me say that as far as I have "seen, female agricultural labour is not (necessarily "or even probably) detrimental to morals. In general "here one sees several women weeding, and if there "be a man with them, he is probably the husband, "father, or son of the woman, or some one of "them."

Does not consider the Factory Act or Print Works Act compatible with farm labour. The night school and Sunday school instruction are sufficient, considering the position in life of the agricultural labourer, to keep up and improve what they have learnt at the day-school before they were fit for work. The poverty of the parents hardly affects the school attendance at all. There are charities, benefit from which is made to depend on punctuality of school payment. Nor does the distance much affect the attendance; the greatest distance any come is between 2 and 3 miles; they would not come on a very wet day. There are outlying dames'-schools for the younger, who cannot walk the distance. There are not a couple of dozen boys and girls, neither at school or at work, and such as there are, are children of drunken parents. No general efforts are being made for the industrial training of girls—the vicar's wife does something in this way; but circumstances do not admit of this being a public concern. Mr. Wood feels very strongly about the girls. They have by the Government system to learn grammar, geography, &c., and only two hours three days a week needlework, which is not near enough. At Mr. Wood's school in Oxfordshire, where he was before, and which was not under Government, they had four hours a day needlework. Present system faulty; girls grow up unable to make clothes, and become useless wives, so that men have a great extra expense in having their wives' clothes made by dress-makers. One woman told him that she could not afford to send her child; the present system actually deters children coming. In like manner boys are taught a quantity of things that make them unfit to go out and work; they should learn farming.

With regard to cottage accommodation, "it must "suggest itself to every thinking man that there "ought to be three well-separated bedrooms at least "for every family. I think there are sufficient such "cottages, but it by no means follows that the said "large families are the occupiers. Very few are "really crowded. The cottages have in general one "living-room and two bedrooms, with a back kitchen "or wash-house; the gardens are of moderate size; "water supply very good. The drainage is tolerable. "but in some particular localities might with advan- "tage be improved. They belong chiefly to the land- "owners, not to the middle class or tradesmen."

Approximate number of children of the agricultural labouring class at day school in the parish:—

	Boys.		Girls.	
	Under 10.	Between 10 and 13.	Under 10.	Between 10 and 13.
On the register of school.	39	4	43	12
Average attendances in winter (October to May).	30	3	29	7

In summer the average would be just two-thirds of the above.

This table is purely of the children of agricultural labourers; does not include the children of smiths, masons, sawyers, carpenters, &c. The total on the books is 226, the average attendance about 155.

32. Memorandum given by *Mr. Ireland*, schoolmaster, Stogursey. Total on books 226, average attendance 158.

33. *Rev. Cyril Wood* (continued):—Has an evening school open 20 weeks in the year, from October to March; two hours, three nights a week; reading, writing, and arithmetic are taught, and religious teaching by the vicar. It would adequately supply the deficiencies of the day-school, if all who need the teaching attended it. The chief causes of irregular attendance are—(1), indifference; (2), distance of home from school; (3), objections of some farmers to allow boys out from 7 to 9 p.m.

Number of scholars in night-school 55.

The Rev. Cyril Wood trusts that deep attention will be given to this memorandum:—"The Govern- "ment system does not induce parents to keep their "children at school. What is the use of grammar "and the 'ologies' to a girl who has to be a plough- "man's wife, especially when really useful things, "such as all kinds of needlework, are necessarily "neglected?"

Mem. by the Rev. Cyril Wood:—I cannot find "that the employment of women in agriculture re- "sults from the scarcity of male labour. I gather by "inquiry that from time immemorial men's work and "women's work have been considered as essentially "different from one another; that men may be "*out of* work, while women are *at* work; that women "have always done such work as they were physically "able to do. Their pay is of course less than "men's."

34. Letter from Mr. John James Ireland, schoolmaster, Stogursey, to Sir A. Hood, Bart.

"Feb. 14, 1869.

"Since September 1865, 21 boys (of agricultural labourers only), have left this school for work, 11 under 10 years of age; 10 over 10 years of age. Out of the 10 over 10 years of age, five were only a few months more than 10 years old. All the other children, who have left, were children of smiths, shoemakers, masons, fishers, carpenters, &c., &c.

"At present in school. On books:—

Boys. Girls.
39 under 10 years of age. 43 under 10 years of age.
4 over " " 12 over " "

"Average attendance:—

Boys. Girls.
30 under 10 years of age. 29 under 10 years of age.
3 over " " 7 over " "

"This is agricultural children only; the grand total of 226 on books is made up in a great measure by children of smiths, shoemakers, &c.

"You will see that of the 12 girls of agricultural labourers over 10 years of age (on books) the average attendance is only seven. This is the class of children kept at home so much while the mother works. The girls of the mechanics, artizans, &c. are irregular, where there are several children in one family; and the boys of such parents are frequently absent in the summer, but fairly regular in winter.

"The evening school would more adequately compensate for the deficiency of previous schooling, if a better attendance could be obtained from those boys who are most ignorant. Some live in farms a considerable distance from the school, and the farmers (in some cases) do not approve of their boys being absent from their farms so late as 9 o'clock in the winter. The indifference to education is very disheartening, or I would suggest a night-school, say at Stolford, or some such place.

"I remain,
"Your most obedient servant,
"JOHN JAMES IRELAND."

35. *Mr. Ireland* complains very much of girls being kept at home to mind younger children, while mothers are out at work. Sometimes one girl is kept, sometimes another, so that no girl in the family keeps the right number of days; which makes the school come out badly in the Government examination.

36. *Rev. Charles Sainsbury*, Wootton Courtenay (population 350. Acreage 3,000 acres, cultivation mixed).—Puts the total of women, young persons, and children employed in agriculture at 56; thus distributed,—

Males.				Total Males under 18.
Under 8.	From 8 to 10.	From 10 to 13.	From 13 to 18.	
—	1	10	12	23

Females.				Over 18.		Total Females.
Under 8.	From 8 to 10.	From 10 to 13.	From 13 to 18.	Married	Unmarried.	
—	—	—	1	30	2	33

In spring, the employments are picking meadows and weeding wheat.

In summer, women are employed in harvest and haymaking.

Somersetshire.

Mr. Boyle.

k.

In autumn, digging potatoes and apple-picking.
In winter; not much done—turnips dug for sheep.
"The mother cannot attend to her domestic duties "as she ought, if she goes out to work; and is "obliged to keep at home from school an older child "to look after any too young to be at school. The "wages are low in actual cash, and the wives are "expected to earn the children's clothes, men pro- "viding rent, food, and boots; they are glad conse- "quently to earn some money by field-work. In our "parish girls do not go out to work. I cannot venture "an opinion as to the *prohibition* of female labour "altogether; yet would gladly see it abandoned by "mothers of families." As regards the boys, "unless "the wages were higher, it would be hard to restrict "the age to a higher figure than 11" for beginning field-work. "Neither the half-day or alternate-day's "act would suit agricultural districts; a require- "ment that the children should attend so many times "at some time of the year would be more prac- "ticable."

There are 63 cottages in the parish, of which 17 have but one bed-room apiece. "The want of proper "bedroom accommodation is obviously injurious to "the morality of young people—*this is the great evil "of our cottages.* The rooms are large but uncom- "fortable; in about 11 cottages, floor of small stones; "houses old and shabby, and not in good repair very "frequently. Rent from 3*l.* to 5*l.*"

17 cottages of which rent is paid to the squire.
16 let with the farms; rent paid to the farmer.
17 belonging to farmers.

—	Boys.			
	Under 10.	10 to 13.	Over 13.	Total.

	Under 10.	10 to 13.	Over 13.	Total.
On register of the school, summer -	31	3	6	40
" " winter -	35	3	9	47
Average attendance, summer -	25	3	4	32
" " winter -	20	4	3	27

There are very few boys or girls who are not either at school or employed. There are 12 boys growing up with insufficient education, of whom five cannot read or very little; they may yet have some schooling. There are seven girls similarly situated, inclusive of servant girls at farm-houses, who do not belong to the parish.

There is a night school open about 22 weeks, from Sept. to April, at which reading, writing, and arithmetic are taught. It is open three nights a week for two hours each. Attendance on the books, 13; average school attendance, 7. Very small, because not inclusive of boys attending both day and night-school; inclusive of these there have been between 20 and 30 lads of 12 and upwards on the register. Still average then only 10. It does not supply the deficiencies of the day-school. The principal difficulty in the way of maintaining an efficient evening-school is "the nature of the employment of boys and young "men; their work requiring them to be engaged at "the time of the school."

37. *Rev. Edward Cox,* Luccombe (population, 500; cultivation mixed). (Mr. Cox, though absent, was good enough to fill up a circular).—Boys are employed in the fields from the age of 9 or 10, for bird-tenting, earlier. Girls are employed occasionally from 11 to 12; no young women; wives of labourers occasionally; hours from 8 a.m. to 6 p.m. in summer; 8 a.m. to 4 p.m. in winter. Would not let boys begin work before 11 or 12 years of age. There is a charity-school at 1*d.* a week, of which the greater number take advantage. The cottages are tolerably good, and conveniently situate; they are not overcrowded, most of them well supplied with water, and good gardens. There are also cottage allotments.

38. *Rev. Mr. Leigh,* locum tenens for Mr. Cox, has only been at Luccombe two months.—Nearly all the women work out, and girls up to 13 or 14, when the best part of them go to service; some others stay and marry in the parish, but most go away to service, and marry from their place. Wages for men, 7*s.* and 8*s.*; women, 4*s.*; boys, 2*s.* 6*d.* Cider is given, but not a cottage. All cottages are in the village, and they have to pay 1*s.* or 1*s.* 6*d.*; good garden with the cottage. Run of a pig given. For food they seldom eat meat, except pork now and then; they have good potatoes, sometimes "better than my own." Herrings from Minehead are hawked about, and make a cheap and good food; they buy them, often as cheap as 2*s.* 6*d.* per 100, and salt them. The women dine at home on bread and tea. The school is almost deserted in potato-time and whort-time.

39. *Rev. Edward Yarde,* curate of Porlock (population, 835; acreage, 6,000, of which 1,300 are arable, the rest moor and wood; not sufficient meadow; arable in the valleys, and large numbers of sheep run on the hills.)—Boys from 10 years upwards are employed, part all the year round, part by the job; begin by driving horses. At 10 they pick stones, keep birds, plant potatoes, pick apples, pick acorns for the pigs. Acorns are very abundant in the extensive woods belonging to Sir Thomas Acland. Girls are very seldom employed; occasionally from 10 years of age to 13 in bird-keeping and potato-planting. They generally go to service at about 15 in the farm-houses. Many go away from the parish, to Bristol, and elsewhere. A good many young men go too; there is also much emigration, but the population is increasing.

Few women are entirely employed in agriculture; very few labourers' wives—there are not six in the village who go out. There is no weeding, and men hoe the turnips. Mr. Rawle, the principal farmer, who farms about 700 acres, employs only two, one regularly, and the other perhaps four days a week. During harvest many go out, and look forward to it. They reckon five harvests here, which last from June to November, hay, whort, corn, acorn, apple. Women and children nearly all turn out for the whort harvest; whortleberries, for which they get 3*d.* a quart, are, as well as acorns, a great source of income in this parish. Almost the only other employment of women is cutting turnips for sheep. Disapprove of female labour; the girls get vulgar habits, and it makes them slovenly and unfit for domestic duties. Five out of six are better in-doors; the wet ground is bad for a girl at all weakly. They go on courting very long, and then marry just in time to save themselves; then it is all right; to have an illegitimate child is a disgrace; about one in 20 perhaps are illegitimate.

Wages in country, 8*s.* and a cottage, and a quart of cider.

Wages in village, 9*s.* and a cottage; rent generally about 15*d.*; a quart of cider.

During harvest some job-work, but introduction of machines limits that now.

No boys should be allowed to work on the land under the age of 10 years. If sent to school from 5 to 10 years of age, they can learn quite enough; but there are several large families in the village to whom such a rule would be a great loss. Much of the work in the hills is done in light carts, which such a young boy is just wanted to drive. There is a Church day-school, supported by the landowners, which has a master and mistress, and is largely attended; also a Wesleyan day-school, fairly attended. There are one or two families can do nothing with; their children neither work or come to school; not above six or seven such children, and all under 12 years of age.

The cottages are sufficient in number, but wanting in proper number of rooms; many with only two rooms. Sir Thomas Acland's are the best, and larger than the others. A good many of Colonel Blathwayte's are on lives, always a misfortune in cottage property; he only came into the property a short time ago. There is also a parson's manor, which is unusual; 150 acres, which he has the power of letting on lives only, a source of emolument, but in a bad state, as cottages are only run up for the time being. The cottages are always overcrowded when there is a large family. Few of them have gardens, being in the village, and many are without allotments; but there are several fields of allotments belonging to Colonel Blathwayte.

40. *Rev. Theodore Muller*, rector of Selworthy (population, 434; acreage, 2,227; cultivation mixed.) Boys are employed in field work at the age of 8 to 10 years all the year through; and a very few girls at the same time in bird-keeping. Deplores boys being taken away so early to keep birds, and for the various harvests, which are the same as at Porlock, including the whort-harvest. Would like to see the German system carried out, *i.e.*, all children forced to go to school from 10 to 14, and parents punished if they do not send them. No child ought to leave school under 12 or 13 years of age. In Germany there are good schools, supported by funds provided for education; the money for which was taken at the time of the Reformation, instead of being handed over to private individuals, as in England. There are few rich people, but no poverty such as we have. Each tradesman in the town has his allotment outside, sufficient to maintain perhaps two cows and a horse. Girls generally go to service at 14 or 15.

There are two infant schools and a mixed national school; but the national school is not so regularly attended as the infant school, owing to the early employment of the bigger children. There are some first-rate cottages, and others being improved. Sir Thomas Acland is the proprietor.

41. *Rev. A. H. Fownes Luttrell*, vicar of Minehead (small market town, population 1,495; acreage 3,971; cultivation chiefly arable, but mixed).—Boys are employed in agriculture from 10 years old; a very few may be employed younger, merely for bird-keeping, a short time in autumn and spring. Girls are not employed. It is not desirable that boys should be permitted to work on the land for any purpose earlier than 9, but at 10 they should be allowed to be earning something towards their maintenance; does not see how agricultural labourers with long families could live without such help. Boys can learn quite enough from 5 to 10 years of age. Mr. Luttrell is not in favour of over-education, keeping boys at school till 11, when they become educated above their station. Those who go out and work are much the best; the others get idling about and do no good. (Mr. Luttrell showed me some very good specimens of writing by a boy of 9, quite as good as others by a boy of 12; so it is difficult to form general rules of what a boy knows at a particular age). There are some children who do not go to school, but few; and in those cases it is fault of lazy parents. It is not desirable to employ girls in agriculture, as there cannot be proper supervision to guard against contamination. Women work to a very trifling extent, not worth mentioning, except at hay-making, when a few go out.

There is a very good school for boys and girls, with a master and mistress to superintend each, and other schools kept by private individuals, besides dames' schools. The children generally take advantage.

This being a small town, with three hamlets, there is fair accommodation for the people, no one has to go more than a mile to work. The cottages are old, but generally well ventilated, and supplied with water. Overcrowding has been attended to within the last few years, and in a great measure prevented. Rent was formerly very low, but has been slightly raised since Mr. Luttrell succeeded. Few of the cottages are very small, but they used to be dreadfully overcrowded; very often the occupier would underlet two rooms to a newly-married pair, and as the family increased overcrowding began. There are very good gardens, and a capital allotment field of 15 acres, conveniently situate.

Wages 8*s.* or 9*s.* and cider. No cottage. People round poor, but somehow do not seem so. Money is always forthcoming for the clothing club and benefit society. In the clothing club subscriptions vary from 1*d.* to 6*d.* a week. The benefit society is open to all the adjoining parishes, but only Wootton makes much use of it. There are 280 members, who subscribe 6*d.* a month. For that they can have 6*s.* a week if ill for six weeks, after that 3*s.* a week. When they die they get 3*l.* for funeral expenses, and each member subscribes a shilling. Can be admitted at 13 years of age. It is self-supporting, and if the funds are in good order, money is often found for an anniversary.

42. *Rev. W. P. Michell*, curate of Carhampton (population 706; acreage 5,195; cultivation mixed). Boys go out to service at 9 years old, to drive horses and carts, but many are employed at a younger age for some parts of the year in keeping birds from the corn-fields, &c. They begin as early as 6 years of age. Bird-keeping takes them for a month now (Feb., March), a month in November, and a month about harvest-time. It is the parents' fault mostly, a farmer thinks himself bound to take a labourer's son as soon as he is old enough. No boy should go out to service till he is 10 or 11 years old instead of at 9 years old, as at present. If you have a good school a boy can learn quite enough by 11. He should not begin work later; if kept at school later he will not settle to manual labour, and gets into idle habits.

Girls are not employed to any great extent, nearly all go out to service as in-door servants. All who go out are in the worst families, *i.e.*, those that have never been educated. There are about four families in which the children have never been inside the school. Women are employed in agriculture to a considerable extent; most of the labourers' wives, who are not kept at home by ill-health or infants, work in the fields. No restriction is necessary on their going out; they are not inferior to other women; it does not lower them in manner. Some masons' wives go to work. "I believe the employment of young "females in agriculture in this district will soon come "to an end of its own accord." Most of the women when married are going to be confined. There are very few illegitimate children. Mr. Mitchell has baptized two in the three years he has been here. It is considered a misfortune rather than a fault. There is always drunkenness in a cider country.

There is a Church of England school, and a Wesleyan. The latter has the upper hand now; the school had been much neglected for many years. With few exceptions the children come to one or other. The only cause that as a rule prevents their attendance is their being employed in the fields, when the corn is first sown, and again when it is ripening. The parents are anxious to get their children taught.

"The cottages are bad. There are enough for the "labouring population, but very few have sufficient "bed-rooms, and the bed-rooms they have are low "and ill-ventilated. They are conveniently situate "with respect to the farms;" there are many two-roomed cottages, and some crowded. Late owners did little, but Mr. Luttrell is beginning to improve. There were a few lodgers, when the church-tower was building. "Most of the cottages have gardens "attached, in addition to which the squire of the "parish (Mr. Luttrell, of Dunster Castle) is about to "divide a field into allotments for the use of the "labourers. This field is conveniently situate, is "large, and the soil good. I believe it is also his "intention to improve the dwellings of the poor."

Somersetshire.
Mr. Boyle.
k.

43. *James Martin Huggins*, schoolmaster, Crowcombe (population 550).—Is master of an endowed school under the Carew charity, which clothes and educates 15 boys, besides giving free education to the rest of the parish. Has 10 boarders in his own house, farmers' children. There are 106 on the books, of these 50 are from Crowcombe itself, the rest from the neighbourhood, as there is no school near. Few stay above 10, and then they go to the farms. They are taken away earlier for a time for mazing (picking up acorns), driving cows, bird-keeping, and are not at school more than half the time. Consequently they forget a great deal; there are few who do not come at all. It is more the fault of the parents than farmers that the children are taken away. The parents are very careless about sending them; would value the education more if they paid a little. There is also an endowed girls' school, at which 1*s.* a quarter is paid; it is Dr. James's foundation. Number of scholars 27.

The cottages are good, none with only one bedroom. Mr. Carew and Sir Robert Harvey are the two landlords; the latter pulls down most of the cottages when they become dilapidated, and so people go out of the parish. Mr. Carew has hardly enough, and the farmers are obliged to get labourers from elsewhere.

44. *Schoolmistress*, Sampford Brett. — Has 75 children on the school-books; average attendance, 54. Boys go away mostly in the summer to keep birds for about four months. Has two of 13 years of age in the school, but one is the son of a tailor.

45. *Schoolmistress* at St. Audries, or West Quantockshead.—Has 48 children on the books, all but four of whom come regularly. Girls stay till 15, and then go out to service. Boys are taken away altogether at about 9 to work about the farm, bird-keeping; but are always glad to come back for a few months. They come to Sunday school up to 15. Had a night-school of quite young men for several years. Attendance eight.

Dulverton Union.

46. Letter from Mr. A. S. Lovelace, occupier, parish of Winsford.

Winsford, Dulverton,
February 19, 1869.

Sir,

I am sorry I was from home when you called here on Monday, as I should have been glad to have answered any questions that you might have wished to ask me, as far as I was able. The printed paper I will fill up in a day or two as correctly as I can, and forward as requested.

In reply to your questions respecting the labourer (the Rev. Mr. Anderson, Winsford, and Mr. T. Acland, M.P. had told me that Mr. Lovelace had offered one of his men 12*s.* in lieu of 9*s.* and perquisites, and the man had refused it), I must say that I never expected (when stating it to those gentlemen, whose names you have mentioned), that it would spread so far, but as I stated to them I am ready and pleased to state to you; I did offer a labourer in my employ at Lady-day last 12*s.* a week, after we had agreed in the usual way, which was as follows:—

	s.	*d.*
Cash per week	9	0
Cottage and about 15 perches of good garden rent-free	1	0
Thirty perches of potato ground, 30*s.* (nearly)	0	7
One quart of cider a day, from Lady-day to Michaelmas	0	6
Keep of a pig	0	3
Wheat, ¾ths bushel a week, at 6*s.* a bushel (market value 7*s.*)	0	9
	12	1

In addition to those privileges I agreed to allow him to join the other men in cutting the grass and corn, which he did, one-third of 35 acres grass, and one-third of 50 acres corn; the potato ground is clean, *i.e.*, free from weed, well manured, and the potatoes are ploughed in; their fuel is hauled free of cost; their cider is not, as Canon Girdlestone has said by the Devonshire labourers, so bad that it makes them ill to drink it, but good cider, bought at 6*d.* per gallon. (Mr. Lovelace is on the hills above the cider country). This man, who is a carter, gets three pints whenever he goes off the farm with his team any time of the year. The wheat, which I have valued at 7*s.* per bushel, was worth at Lady-day 8*s.* and 8*s.* 6*d.* per bushel, and is now worth 6*s.* 6*d.*, good red wheat weighing 62 lbs. per bushel; therefore you will see that I have not over-rated the privileges. In case of his having accepted the 12*s.*, I should have charged him 3*l.* a year for the cottage and garden. There are other ways in which he is benefited, such as corn for fattening his pig, butter, milk, &c., but this I do not wish to enter into, because it was not in the agreement; I do it for encouragement, as he is a steady and honest man; he has been with me since Lady-day 1860. I consider any other men are equally well paid, they get the same privileges with 1*s.* a week less money, and are at piece-work half their time; my shepherd lives in the house, and gets 5*s.* a week and washing done.

I shall be glad to answer anything you may wish to ask me respecting my own farm, this parish, or the neighbourhood, so far as lies in my power.

I remain, Sir, your obedient servant,
A. S. Lovelace.

P.S.—The carter's name is James Needs.

47. Extract from circular filled up by Mr. A. S. Lovelace, Winsford.

Population of parish 576; acreage 8,656, chiefly pastoral; a large portion of the parish is common land, uninclosed. No boys under 12 years of age are employed, the youngest employed on farms in this parish are servants, consequently employed at all times of the year. No girls employed, and women only in hay or corn harvest. In this district if a farmer has not sufficient cottages on his farm for the labourers, he keeps them in his house. No need to put any restriction on the employment of women and children.

48. *Mr. Hardinge*, occupier, Highercombe, Dulverton (about two miles from Dulverton).—Women don't like coming out to work; get them generally corn weeding and picking stones on the grass. They won't come regular; if you want women, have to go to Dulverton for them. Has just agreed with a man taking one of his cottages that his wife is to go out to work. They work from 8 a.m. to 5 p.m.; receive 8*d.* a day and 1½ pints of cider.

Has no boy working under 12, they are no use younger; likes a man better with horses, cannot trust a boy. Sometimes gets a little boy to go along with the plough, pays him 2*s.* a week. Mr. Hardinge's brother (who has an adjoining farm), is three miles from any place, employs boys; sends his labourers' boys out to work as soon as they are old enough. They begin bird-keeping for their meat. Boys are necessary; it is the best plan, but they do it very carelessly, and you must put a man to watch the boy. Boys here all go to school.

Has two cottages on his farm; Sir Thomas Acland is building him two new ones; gives 4*s.* 6*d.* to a man who lives in the house. Wages 8*s.*, house rent-free, run of a pig, wheat 6*s.* a bushel (gives it to one family, a long family, at 5*s.*), firing "like I have," 30 yards of potato ground, ready cultivated and manured; cider one quart (carter three pints, and 1*s.* a week more); comes up to 12*s.* or 13*s.* Would willingly change the present system for 12*s.* or 13*s.* They have a good deal of task-work too, at this they earn 3*s.* 6*d.* or 4*s.* a day. They also get meat given them in harvest. They are better off on these hills than any place. It is not hard to get labourers, they are much better off than they are in Dulverton, where those who live there have to pay 1*s.* 6*d.* for a cottage per week. They are better off here than they are at

Wellington, whence Mr. Hardinge came; it is the general case all over the hills. Labourers would not live in this climate unless they were comfortably off. Fair wages are not an injury to any farmer. Another advantage they have is that Sir Thomas Acland allows them annually to cut 1,000 of turf on the hills.

Mr. Hardinge came in again next morning to say that in winter he gives labourers 8*s*., carters 9*s*.; in summer, labourers 7*s*., carters 8*s*. "They like an "extra shilling in drink in the hot weather."

(N.B.—I was particularly recommended to make acquaintance with Messrs. Lovelace and Hardinge by Mr. T. Acland, M.P., on whose father's property they hold farms).

49. — *Warren, Esq.*, clerk of the Dulverton Union, and magistrate's clerk.—The union has only a population of 6,000, and an area of 50,000 acres, of which 12,000 belong to Lord Carnarvon, and nearly as much to Sir Thomas Acland. The cottage accommodation on the estates used to be very bad, people living in the villages and going out long distances to work; but Lord Carnarvon has built some new cottages on his estate, and good ones; Sir Thomas Acland is doing the same. The general bad state of the cottages may be attributed to so many being on leases for lives, the case at *Exton*, which is a miserable parish with a good many hovels; *Winsford* is an exceptional case; there some 12 of the best cottages are let on leases for lives.

There is really little employment for women and boys in a pastoral country, which this is; what work there is for women is chiefly turnip hoeing and turnip cutting, and a little corn weeding; but there is but little wheat, and they do not care to weed oats; turnips are necessary for the sheep, as it is a pasture country, and the usual system is to grow alternate oats and turnips. The country partakes the nature of Somerset less than that of Devon, having rich water meadows in the valleys, a Devonshire characteristic.

Wages never less than 8*s*.; what Canon Girdlestone says is quite true, but he should have gone calmer to work. The privileges consist of (1) cider, 1*s*. to 1*s*. 6*d*., which is a great deal when wages are low, for one man in the family to spend on his drink. There is not so much drunkenness in the village as there used to be; there are a good many public-houses, but several cannot now even support themselves. Spirits were drunk just as cider; (2) cutting brushwood for firing; formerly there used to be squatters on the moor who sold turf all over *Dulverton*, and very cheap, but that has gone out; (3) run of a pig in a field; (4) grist corn and tailing, but that is hardly an advantage; (5) a perch of potato garden. They have to pay for their cottage out of their earnings, from which, if they hold of the farmer, he deducts 1*s*. In Dulverton cottage rent is 3*l*. to 4*l*., the cottages are very bad and crowded on the outskirts, with often only one bed-room, many of them belong to the man who lives there, often to a man who owns a small block, and will not or cannot afford to do anything for them.

Dulverton is purely supported by agriculture and its market. *King's Brompton* is the parish that takes most relief, but is improving. It is under many proprietors, Lady Carnarvon does most good there. *Exton* is very wretched, it had no resident landlord, but a new one has just come in, and is inclined to do good and improve. *Hawkridge* is very small, about 60 people. *Withypool*, very wretched, belonging to several owners. *Exford*, a neat little parish, belonging partly to Sir Thomas Acland, partly to Mr. Clark; the late rector, just dead, did much for it.

50. *Mr. Hammond*, relieving officer, Dulverton Union.—Women and boys work little; only in turnip time, and not much of that this year, owing to severe drought. Vagrancy is much on the increase; received over 50 vagrants this quarter; the average used to be under 10. Vagrants come from all and any class; soldiers, miners, mechanics, labourers, &c. (I found this a very general complaint at nearly every union I visited in the county).

51. — *Trevor, M.D.*, Dulverton.—All that Canon Girdlestone says about this country is quite true. Wages are little more than 8*s*. a week in money, with privileges, such as three pints of cider, run of a pig, sometimes on the road! a bad cottage, grist corn, &c.; farmers are ready enough to give corn at 6*s*. a bushel, when that or anything lower is the market price. If it is below the market price, they generally have none left. It is a natural consequence of such low wages that all the best women go out to work to help their husbands, all their cottages are the neatest and tidiest in the village, as a rule, theirs being of course the most well-to-do families. The idle women make the excuse of having a child, not to go out and work; if you see a woman dawdling about the village with a child, you may be sure she is an idle woman. Work is by no means bad for them; wetting their petticoats does not do them any harm; for boys work is the best thing in the world. The clergy complain of their leaving school at 11, but Mr. Trevor does not himself hold with this new-fashioned education, and all that geography. Every school has a map of the Holy Land, and every good boy can tell how many feet the Dead Sea is below the Mediterranean; but they don't know any English geography; can quite believe Canon Girdlestone's story of the people he sent to Yorkshire, asking whether they had to cross the sea to get there. Their English geography only extends to where Brendon hill rises, and an intimate acquaintance with where every stag in the county lies.

The state of morality is very low; it is all very well for women being afraid of sending their boys to towns, but there is quite as much temptation for them in the country. They very often do not marry till the child is just coming. Recollects as an instance of the feeling of the people on the subject, that he went one day to the confinement of a farmer's wife eight days after she had been married. He called in at another house on his return, and mentioned to the woman of the house, where he had been. She turned and pointed to her daughter, a girl of 19, and said, "Why she was born when I had been married three months, and I was 'most ashamed of that." A short time ago a woman of 35, who lived in one of the best of the villages with her old father, her uncle, and a cousin, came to the union to be confined of a child by the uncle, and did not seem the least ashamed of the connection. Some time ago a proposal was made at the South Molton Union with a view to checking this evil, that all women who came to be confined of an illegitimate child, should wear spotted gowns instead of striped. The late Lord Fortescue, and other men of influence, took it up, and a special meeting of the guardians was held to consider the subject. One of the farmer-guardians, however, got up and said that if this were done, it would be only just that the fathers should wear spotted jackets too, and winked at some of the younger ones; so the affair went off in a laugh, and nothing was done.

Cottages are very bad in the district generally, specially in Withypool, where there is no one resident above the rank of a farmer. Cider is not bad for the health; it is often given at Exeter hospital instead of wine, but that may be in consequence of an old tradition.

52. *Rev. Henry J. Taylor*, curate of Dulverton (population 1,552; acreage 8,339; cultivation mixed).—Scarcely any Dulverton women are employed in agriculture, they will not go out. They get washing and charing in the town, and they prefer their boys going out to any work but farm-work, at which they think they are over-worked. A woman can make more by washing than she can in the fields. When a farmer takes a labourer, he asks if his wife can go out to work, as he wants her in turnip-time, haymaking, and often in the house. A family of father, mother, and son can earn a lot in harvest, the father cutting,

Somersetshire.
Mr. Boyle.
k.

mother gathering, and son sheaving; they are paid by the acre. No restriction is necessary on the employment of women or boys; scarcely any girls are employed at all.

There are some bad cottages in the village, but they are getting better. The supply is ample, and Mr. Taylor knows of no instance of overcrowding, nor have any evil results to morality come under his notice. Some have only two rooms. Lord Carnarvon, who has rebuilt his farms, bought some cottages the other day, and went all over them; he has since improved them, adding to some, and dividing rooms in others. Till lately he had not enough cottages on his farms, but he has now. Cottages are mostly on the farms, but some Dulverton people go out to work three miles distant in neighbouring parishes. As a rule, the labourers who live on the farms are best off; they get a cottage rent-free, in the town they pay 4*l.* or 5*l.* for one not near so good; in the country they get a garden and the run of a pig, not so in the town. For potato gardens labourers pay 1*d.* (?) a yard; it used to pay them well enough formerly before the potato disease, but scarcely pays now, as they do not get so much out of it as they used. A small garden is generally given with the cottage, potato garden is an extra thing, for which rent is paid, manuring and carriage being done by the farmer. The people subscribed 600*l.* to buy a bit of land to be divided in gardens, and it lets at 24*l.* per annum, 4 per cent. interest. If those who require a bit are more numerous than the subscribers, the surplus may be let to non-subscribers. This does not look as if the people were poor.

There is a very good parochial school, of which advantage is taken. There are 160 on the books; boys are generally taken away at 11 or 12 years of age. Parents do not grudge the pence, but think it time they should begin to earn something.

53. *Rev. W. P. Anderson*, Winsford vicarage, diocesan inspector. (Population of Winsford, 574; acreage 8,537, of which 2,706 are uninclosed. Cultivation mixed; rather more pasture than arable; tolerably good, not high farming).—"One or two "women are generally employed on each farm, the "children employed are in service in the farmhouses, "except sometimes for bird-keeping. The women "are chiefly wives of workmen on the farms, and they "are expected to work out by the farmer who hires "the husband. Hardly any unmarried women are "so employed except at harvest time. In spring the "employments are pulling turnips, planting potatoes, "and bird-keeping; in summer, hoeing and hay-"making; in autumn, bird-keeping and harvest; in "winter, pulling turnips." "Out-door work tends "to make women rough, the conversation amongst "people working in the fields is often rough, and "where young unmarried women go out to work, "it leads to immorality. Yet there are cases in "this parish of the most tidy married women working "out, and also of the most idle, dirty, and gossiping "staying at home. Whatever may be the case in "other parishes, I do not think there is here any "need of restrictions on the employment of females, "but speaking generally I think it would be well "to prohibit young unmarried females from working "in the fields altogether, excepting as above" (harvest time). "I would have no boy employed under the "age of 12, boys and girls should all be kept at school "till they are 12 at least."

The existence of a school depends very much on the clergyman working in it a great deal, and stirring up the people to send their children to school, if he does so, they will come, and the parents will not mind their being punished, even caned, if necessary. The school is well attended, the schoolmaster a clever man, he is a native, which is rather a disadvantage, "no man a prophet in his own country." (Mr. Anderson showed me his book of school attendance, which did not seem to be affected much by out-door work). "With the exception of a few boys taken off for "bird-keeping, and in the time of harvest, the attendance at school is not affected by children who live "at home being employed in agriculture; but there "are some young apprentices to small tradesmen, "who would be greatly benefited by the first regulation of the Factory Act, half a day at school, and "half a day at work." The extent of the parish little affects the school attendance, little girls of 8 and 10 years of age coming three miles to school. Most parents can afford to send their children. There are hardly any children neither at school nor work, except infants; "about three families are not sent "to school by their parents as well as they ought to "be. It is difficult to say how many are growing "up with insufficient education; very few actually "belonging to the parish; there are farm servants of "both sexes, who come from other parishes, with "very little education. They are a constantly "changing element of the population."

Table of children at school in the parish of Winsford.

Winter - -	17	9	26	14	8	22

N.B.—"The number on the books gives the number of children fairly educated rather than the average attendance, because different children are absent at different times."

Mr. Anderson himself keeps an evening school from November to March for two hours three nights a week, at which he has had 17 present. He teaches writing, arithmetic, and reading, the latter including Scripture and English geography. "It helps some "young men, apprentices, and lads at work, also "keeps them out of mischief;" they forget very much. Some who come to be married, declare they cannot write, and come to the night school afterwards and turn out to be able all the time to write well. They are stupid and afraid of making of mess of it, and will only put their mark. A good many young men go away, chiefly to towns, where they get on well, being steadier than town boys. They are sharp enough too.

Mr. Anderson reckons wages at 12*s.* altogether. Mr. Lovelace of Leigh, a tenant of Sir Thomas Acland, to whom all the parish belongs, offered a labourer 12*s.* to give up all his perquisites, and he refused it. They get 8*s.* in money, a cottage (house rent is about 2*s.*); cider not so much as in other parts, as it is not so plentiful here, the run of a pig and grist at 6*s.* a bushel. Sir Thomas gives them the right of cutting what turf they want on the moor, and they get a good deal of wood besides. A woman makes so little it is hardly worth her while to go out to work.

"Most of the farms have one, two, three cottages on them; the number sufficient, but many have only one bed-room, and those are necessarily overcrowded. They are valued at from 3*l.* to 5*l.* a year, the labourer receiving so much less wages in money; most of the agricultural cottages belong to the landowner, and are let by the tenants of the farms to their workpeople for a nominal rent. The old cottages are rudely built and badly floored, the size of the sitting-room is generally large enough, the windows too small, the ventilation not bad; there

is hardly any drainage except the natural surface of the ground; the bed-room accommodation is insufficient; water supply good; gardens attached to most of the cottages, outhouses bad. The progress of increasing accommodation is very slow, a few better cottages have been built lately.

"I cannot say that the morality or health of the "poor is perceptibly affected by the bad accommo- "dation, their comfort certainly must be." Some eight or ten of the cottages have but two rooms, and there have been some bad instances of overcrowding. A husband, his wife, six children, and a pair of old people, living all together lately in one such cottage, were moved into a new three bed-roomed cottage. They said there was not room in the new cottage for the old people, who remained behind in the old; the fact was that the new bed-rooms were small; in the old cottage, though there had been but one bed-room it was very large, and they did not appreciate the advantage of separate rooms. The state of morality is fair; there have been only two illegitimate children born in the village during the last nine years, but one or two more have been born at the union. They generally marry when a child is expected, but sometimes in farm service the boy will bolt. The girl either comes home to her parents or goes to the union to be confined; the old people keep the child and seem just as fond of it as of a grandchild born in lawful wedlock, and the neighbours consider it in the light of a misfortune. Mr. Anderson stops certain privileges of women whose children are born too soon after marriage, such as the clothing club, &c., and finds it has a beneficial effect. *Exford*, higher up the valley, is worse.

54. *Rev. Alexander Tate*, vicar of King's Brompton (population 929; acreage 8,810; cultivation mixed, chiefly pastoral, becoming more so; a large quantity of woods supplying bark every year).—"Girls are not "generally employed in out-door work; they are "taken as household servants into farmhouses at "about the age of 12. Married women are employed "in such work as hoeing turnips, weeding corn fields, "and gathering in the root crops. The employment "of mothers of large families necessitates keeping at "home one of the elder children who ought to be at "school, and in this way is undesirable."

There is no need to restrict the working of boys. They go to work generally at about 11 or 12; they plant potatoes in April, make hay in July, harvest August and September. "There are two day "schools of which the principals are elderly men, "one dame's school, and one infant school. The "main causes of irregular attendance are the "truant disposition of the children, and the extreme "indifference of the parents on the subject."

"The cottages have been greatly improved since 1850, partly through a higher sense of duty on the part of the landowners, partly by the appointment of inspectors of nuisances. They are conveniently situated; overcrowding and want of ventilation are the exceptions; they are abundantly supplied with water; almost all have good gardens within a reasonable distance."

55. *Rev. F. King Warren*, rector of Exton (population 410; acreage 4,124, one rood, 24 poles; cultivation mixed).—"Boys from 12 upwards are very "generally employed in the parish all the year round. "They live at the farmhouse. Boys under 12 are "employed occasionally in bird-keeping and harvest- "ing. It is desirable that they should not be "allowed to go to work under 12, as the small "sum earned by boys under 12 does not at all "compensate for loss of schooling." Their pay is only 2*d.* or 3*d.* a day, which hardly pays for wear of clothes. Farmers are beginning to think, too, that if there is not a man to watch a boy, he does no work. They object rather to education; one said the other day that they know more than the farmers. Sometimes a mother takes out her children to help her in a turnip contract. "Except in bird- "keeping time no young children are kept from "school by labour; the indifference, neglect, and "idleness of the mothers is the cause of bad atten- "dance." They get offended in case of punishment or reproof and take the children away. "There is "a dame's school supported by the principal landowner "of the parish, to which the children can go without "payment, but not half of them take advantage of it." Young lads go off a good deal to the railway.

"Girls under 14 are very rarely employed in field "labour. Girls from 14 upwards, if they happen to "be out of a place, are occasionally employed in "harvesting, and very rarely in weeding. The "labourers' wives are generally employed in weeding, "pulling turnips, picking stones, and harvesting." Nearly every married woman works. Their cottages are much dirtier than those of the women who stay at home, and they are a rough set; but "no "harm or very little arises from their employment "in agriculture in this parish, except that when the "mothers are at work, the elder girls are kept from "school to look after the home and the baby, if any." The union does not allow relief to widows, if able-bodied, so they must go out.

The wages are 10*s.* to 12*s.*; there are mines about, which raise the wages. Grist is included. Cider given, but it is not a cider country; no cottage; a good cottage and garden lets for 2*s.* to 2*s.* 6*d.* There is not much wheat grown, barley and turnips; and it is a great breeding country.

"The cottages are pretty fair, and are quite sufficient in number and fairly situate with respect to the farms. No cottages are at present overcrowded, except one or two occupied by miners. A year ago a great deal of harm arose from the overcrowding of cottages occupied by miners, but we have fortunately succeeded in turning them out. The mines are in a neighbouring parish. The cottages are well supplied with water, well ventilated, and very few without a good garden. All the cottagers can obtain a convenient allotments."

56. *Rev. Joseph Jekyll*, rector of Hawkridge and owner, Tarr Steps, Dulverton. (Population of parish 390; acreage 7,200, of which arable and pasture 2,840, commons 4,000, woods and roads 360).—"The culti- "vation is chiefly pastoral, and the rent is made from "Exmoor sheep and the Devon cattle; all produce "consumed on the same. The land is divided into small "tenements, and each holder does the work on his "farm by his family and in-door servants. There are "not more than 20 out-door labourers in both parishes "(Hawkridge and Withypool), and they are employed "in inclosing commons. Boys and girls are employed "only in summer during the four harvests, namely, "turf harvest, hay harvest, whortleberry, and corn "harvest," at which times nearly every man, woman, and child turns out. Turf harvest comes first, in May, whortleberries in June (they get 2½*d.* a quart for whortleberries), hay in July, harvest in September. More corn is being grown now and women also are employed to cut turnips. No restriction necessary on the employment of either boys or girls in this district. It being a pastoral district there is little work for either women or children.

Labourers generally earn 2*s.* a day in summer, not so much in winter. There is a great deal of piece-work to be had owing to the fencing and clearing now going on. Mr. Knight bought 25,000 acres of moor about here when sold by government; and for fencing and clearing they get 2*s.* a day. When Mr. Jekyll farmed himself he always gave 2*s.* a day to his men, and he farmed extensively at one time. The glebe is large and he doubled the value of it; he lets it now. But for the 2*s.* a day he used to get the best labourers. The usual wages for an ordinary labourer are 9*s.* a week; he gives that to two old men he still employs, whom he pays as if able-bodied. Labourers also get the run of a pig, as much turf as they want, a limited quantity of cider in summer, for there is not much here, and milk in the winter. The land on

Somersetshire. Mr. Boyle. k.

the hills is far better than people give it credit for being, and there is very good water meadow in the valleys, let at 3*l.* an acre, which near a town would be worth 5*l.*

"I have a dame's school at Hawkridge, which is "well attended by all the children up to 13 or 14 "years. I had also a day school in Withypool from "1836 to 1856, which was very well attended. The "farmers subscribed to it for a time, but as soon as "their own children were educated withdrew their "subscriptions, and left me to support the school, "which I was obliged to give up for want of means." There are a good many dissenters there, and they got up a school and asked Mr. Jekyll to join. He said he would if they would teach the Church catechism, but they declined and so he would have nothing to do with it. Considers Withypool an immoral place, a good many poachers there.

"The cottages are good in Hawkridge; only moderate in Withypool; they have gardens and allotments conveniently situate."

Wellington Union.

57. "General impressions of the district of Wellington Union, bordering on Devon.

"Diary, Jan. 27, 1869.—Few women are employed in agriculture. As wages rise, which they have done actually within the last six months, according to the information of the Rev. Mr. Kitson of Hemiock, the women find they have enough to stay at home. Wages on the hills are about 1*s.* lower than at Wellington, but at Wellington their being high is due to local circumstances, there being extensive serge factories in the place, which employ a large number of hands, including women and children. In-door work too is to be got for women, such as needlework, washing, &c. Further east, as at Milverton, wages are lower again, it being a purely agricultural district; they are much the same as on the hills, 8*s.*"

Hardly any girls are employed—they prefer in-door work, such as embroidery, dressmaking, which farmers deplore, as it makes them superior to being farm servants, and useless as labourers' wives. They like getting away to the towns, and if they return, return with habits contracted that make them of no use in the country. A farm servant makes the best wife—a servant in a gentleman's family is liable to have contracted luxurious habits. Both women and boys are less employed on the hills than in the valley. Boys are little employed under 12; sometimes for bird-keeping; they are not necessary for leading the plough horses, as most of the district being on the sandstone, the soil is light, and only two horses are required to plough, so that reins can be used.

58. *Charles H. Fox, Esq.*, Wellington, who was good enough to put at my service papers of wages which he had collected from all parts of the kingdom, and who is intimately acquainted with the condition of the poor of this district, remarks, that although the people live close on a railway, by which it would seem that when discontented with their wages they might easily move elsewhere, they are so helpless it never occurs to them to move unless the way is made smooth for them, by some one taking all the arrangements into his hands, and settling where they are to go to. Thus though 12*s.* are to be earned within two hours' railway of Milverton, where they only earn 8*s.*, they will not move on the chance of work. An engagement must be made for them before they start; they will not go to Yorkshire simply because they hear that 15*s.* a week is to be earned there. They are not particularly attached to the soil, but the men who have once married and settled down will not move—the boys and young men, and young women only go.

59. *W. Ayshford Sanford, Esq.*, Nynehead Court.—The most to be inquired into in this district will be in the Wiveliscombe district, on the slopes of Exmoor, where there are few resident squires, and the people are consequently very much in the power of the farmers; getting in that part of the country in many instances only 7*s.* a week. Many of them come down to get work in the valley, and there is a sort of system of migration going on, the valley people moving off to get work elsewhere. In the valley the new arrivals are contented to work for 10*s.* or 11*s.* a week. Cider is given, and is reckoned at 1*s.* weekly; it is a great cider district; every one in the village has a garden of about one-fourth of an acre, where vegetables are grown; some few grow corn, but that is discouraged. The Wellington people have allotments. There is a large factory there belonging to the Fox's; it formerly led to much immorality, as men and women left off work together, and came out in the dark evenings, when they would pair off together. This was represented, and an alteration made, women being let out ten minutes earlier. This has had the desired effect, as they go off straight home. The parishes about are fairly well off for cottages, and there is no immorality. Formerly a good many women used to come to swear children at sessions, and there are but few now. There is a greater feeling against anything of the kind between farmers and their servants, and it is going out much. Very few children are born within nine months of marriage. The rule is for married women to work in agriculture—no girls.

Cottage property is a bad speculation; cannot build one under 100*l.*, or let it over 4*l.* per annum, and that it is no return for a landlord, who has to pay repairs out of this rent. Would like to see a state of things where cottages could be let for 7*l.*, which would be a fair return, but to get that the labourers' wages must be 14*s.* or 15*s.*

The school is a free school, very small, but it is a small parish. The attendance is 40, and there are no boys admitted after nine years of age. Those who wish for more schooling have to go to Wellington, a mile distant. The Rev. Mr. Walrond has a night school, to which boys are admissible after leaving the other.

60. *Mr. Gidley*, Chipley, bailiff to E. Ayshford Sanford, Esq.—Calculates the shepherd's wages at 14*s.* 10*d.* per week; 41*l.* 3*s.* 4*d.* per annum, rather more.

	£	*s.*	*d.*	
Cash, 11*s.* per week - - - -	28	12	0	per ann.
3 hogsheads of cider (3*l.* 9*s.* 4*d.*) -	3	9	4	„
Wood (6*d.* per week) - - - -	1	6	0	„
Potato ground (6*d.* per week), house, and garden - - - -	3	18	0	„
1*l.* extra in harvest, 1*l.* extra in lambing, with coffee and sugar during lambing - - - -	2	0	0	„
	41	5	4	

Head carter:—11*s.* per week.
House and garden.
3 hogsheads of cider per annum.
Wood, 5*d.* per week.
Sunday meals (1*s.*)
Pint of ale every night (1*s.*)
Total - 42*l.* 5*s.*

2nd carter:—11*s.* per week.
2 quarts of cider per week (3*l.* 18*s.*)
A little wood (say 10*s.* a year).
Extra in harvest, 12*s.* 6*d.* per week.
33*l.* 15*s.* per annum.

Other men:—10*s.* 6*d.* per week, no cider unless hard at work.
In harvest 2*d.* per hour extra. Tea and cider.

The same men are often employed at job-work, at which they can make 12*s.* or 13*s.* a week.

Women make 4*s.* a week, Michaelmas to Lady-day.
„ 5*s.* a week, Lady-day to Michaelmas.
„ 6*s.* a week, with tea during harvest.
They work out from 8 a.m. to 6 p.m.

Has three generally employed—one old woman constantly. They bear just as high a character as the other women, and their cottages are as tidy. The

work among the mangold and turnips is let to women. Has no girls at work; they are picked up for the factory. Women like out-door labour.

Has four boys employed—the youngest 9 or 10 years of age. All go to night school. They come as early as 7 years old to scare rooks (drove horses himself at 6); scaring birds is light work, but tiresome, must go on on Sunday.

All cottages have good gardens; Mr. Gidley has great doubts about whether it is good to have large allotments; it is difficult to get enough manure. Population of Nynehead a little under 300, of Langford Budville about 500, and diminishing; the latter was a drunken parish; and there was a good deal of illegitimacy, but it is better now in both respects.

61. Letter from J. E. Knollys, Esq., agent to Lord Ashburton, to E. A. Sanford, Esq.

My dear Sir, Fitzhead Court, Jan. 25, 1869.

I am sorry to say that an attack of this prevailing influenza makes me a prisoner to the house today, and to-morrow, if I am in any way well enough, I must leave home for town; so that with much regret I must give up the pleasure of seeing Mr. Boyle.

I have however made a good many inquiries as to the general rate of wages in this district, and I have made several notes in the accompanying little memorandum book, which even at the risk of their being unintelligible to Mr. Boyle, I think worth sending to him. I found Mr. John Lutley of the Parsonage farm well informed on the subject, (he was for some time a bailiff with Mr. Bouverie), and finding that his accounts were well kept I have obtained from him the actual cash paid for a year to his men. Putting a money value upon the other advantages which his men have, their average weekly earnings come out at 13*s.* 2*d.* He says that Mr. Wilton, and his other neighbours on that side Wiveliscombe, are he thinks on very much the same terms. The extra earnings on each farm vary a good deal, and affect to a greater extent than either employer or employed imagine the total gainings of the year. You will see I have put no money value upon many little things which are a considerable help to a family, but are of more importance in showing a good feeling between master and servant than as increased wages. In the several instances which I have noted, the extras are calculated more closely perhaps by one man than another; but you will readily see what the average will come out at.

I find a growing feeling among our best tenants to pay money instead of cider, and I think that with a general effort this, which would be an immense good, might be obtained. The "modus operandi" is too deep and long a story for this letter, but that point gained, the great scandal that rests upon us would be done away. The grist corn tells both ways. I don't like it. In John Davis's case (Blackgroves), the labourer gets the decided advantage. I believe that Mr. Boyle will get the most reliable information from respectable farmers taking an interest in the question. * * * * If any practical good is to come out of the inquiry it is of the first importance to carry the best men among the farmers with us.

Believe me, yours very truly,
J. E. Knollys.

"Enclosures."

Run of a pig	0	4	
Firing	0	3	
	13	2	

J. Lutley.

Parsonage Farm, Wiveliscombe.

(2.) Enclosure No. 2. Further statements of Mr. J. Lutley's wages. Estimate excluding task-work, from notes by J. E. Knollys, Esq.

	s.	*d.*
Money wages	8	0
3 pints cider, sometimes money	1	3
Potato ground 30 yards, manured and ploughed in and drawn home, 1*s.* 3*d.* to 1*s.* 6*d.* At 1*s.* 3*d.*= 2*l.* 2*s.* 6*d.*, or per week	0	10
Run of a pig, 35 weeks at 6*d.* would be 17*s.* 6*d.*	0	4
Firing from hedges, and drawing, say	0	3
House rent-free with good garden	1	6
	12	2

Besides manure for garden and straw for pig.

The above is the rate for ordinary men. Mr. Lutley makes no agreement with the men for cutting corn. More frequently others are employed in cutting; these five regular men work in carrying corn, &c.

Extra wages.

Say harvest, on an average 10 days carrying corn, 1*s.* extra each, 10*s.*

In hay time, a supper.

Turnip hoeing, generally 3 men only.

Christmas gifts.

Shepherd gets 1*s.* a week extra; hours of work 6.30 to 5, with half hour for breakfast and an hour for dinner. From 1st Dec. to 1st Feb. from 8 till dark, but come out after breakfast.

Statement of wages of *Mr. Fishleigh*, Dean, Fitzhead.—(294 acres.)

Standard wages per week 9*s.*; no house given. Shepherd 9*s.* 6*d.*

Carters during harvest, say 18 days, 2*s.* 6*d.* a day, 15*s.* a week.

Extra wages for a labourer during harvest 2*l.* 2*s.* ditto during haytime 5*s.*; ditto pulling mangold, say 6 days, 9*s.* Cider, 1*s*, 6*d.* per week each man. Use

Somersetshire.

Mr. Boyle.

k.

of a horse and cart; firewood for making a hedge; hoeing about 52 acres of turnips at 2*s.* 6*d.* a day, 1*l.* 12*s.*

Summary.

			s.	*d.*
Money			9	0 per week.
Harvest earnings 42*s.*				
Hay-time 5*s.*	88*s.*, or spread over 52 weeks=		1	9
Mangold pulling 9*s.*				
Turnip-hoeing 32*s.*				
Cider			1	6
			12	3

Statement of wages of *F. Fishleigh*, jun.—(139 acres).

Carter, 9*s.* and house.
Shepherd, 9*s.* and house, and 1*l.* extra in sheep shearing.
Farm labourer, 8*s.* 6*d.* and no house.
} Wheat 1*s.* a bushel below the market price, and firewood for making the hedge.

Cider, carter and shepherd, 14 quarts per week= 1*s.* 9*d.*; farm labourer, 1*s.* 6*d.*

Extra work, hoeing 30 acres of roots, 1*l.* 10*s.*
Harvesting extra, 2*l.*, and 6*d.* extra cider per day.

Summary.

			s.	*d.*
Money wages		per week	8	6
Extra work	Turnip hoeing 1*l.* 10*s.*			
	Harvest 2*l.*		1	6
	Hay-time 6*s.*			
Cider			1	6
			11	6

(3.) Statement of wages paid by *S. Bennett*, occupier.—(134 acres).

Farm labourer's wages (with house), 9*s.* Wheat at 6*s.* per bushel; 1 bag of potatoes at the planting. Cider, 3 pints a day, 1*s.* 3*d.* Extra wages in harvest for 14 days, 14*s.*; do. cutting corn, 2*l.* Horse and cart—firewood for cutting. Straw for pig.

Summary.

	s.	*d.*
Money wages	9	0
House rent	1	3
Bag potatoes, 8*s.*; land, say, 18 (?) yards, 18*s.*	0	6
Extra earnings	1	0
Cider	1	3
	13	0

(4.) Statement of wages paid by *Mr. John Davis*, Blackgroves.—(217 acres).

Farm labourer.—In cash, 8*s.* a week.
2 quarts of cider a day.
Grist corn at 6*s.* per bushel, but if the price is below that, then at its worth; they have this or not at their option.
House rent, 1*s.* a week.
Firing for cutting, and drawn for them.

Farm labourers, harvest wages—extra 1*s.* a day, and extra cider for (on an average) say 20 days, and 10 to 12 days cutting corn, when the earnings would be 3*s.* extra wages. Say harvest extra earnings not less than 2*l.* 10*s.*

Farm labourers, haytime, about 6*d.* a day extra, when making or carrying hay, say for 10 days=5*s.* Mowing 50 acres at 2*s.* 6*d.* per acre, with one gallon (6*d.*) per acre of cider to be divided among three mowers. Say 50 acres cut by three men at two acres per day=8½ days per man=2*l.* 2*s.*; making the extra labour less 8½ days at 16*d.* per day (usual daily wages), in the whole about 30*s.*, besides cider.

Piece-work. (1) turnip hoeing, mangold hoeing; (2) mangold gathering; (3) hedging; (4) shearing hedges; (5) reed-making after machine.

	£	*s.*	*d.*
(1.) 16 acres turnips, &c., by each man, once hoed, at 2*s.* 6*d.* an acre =	2	0	0
8 acres turnips, &c., second time at 2*s.* 6*d.* an acre	1	0	0
	3	0	0
Less 24 days wages at 16*d.* a day average work an acre a day	1	12	0
Extra earning being	1	8	0

(2.) 8 acres mangolds, from 10*s.* to 12*s.* per acre= 4*l.* 8*s.*

N.B. Extra hands had in for this, about 7*s.* 6*d.* extra per man; wives earn about this.

(3.) Hedging done in short days, and not much extra money earned.
(4.) Shearing hedges, done in autumn
} say for the two, 5*s.* per man.

(5.) Reed-making on wet days; not much extra.

Summary.

	s.	*d.*
Regular days in cash	8	0
2 quarts cider, at 6*d.* per gallon	1	6
Grist corn from	0	9
House rent 1*s.*, as against 1*s.* 6*d.*	0	6
Say harvest wages=1*s.* a week	1	0
Turnip hoeing, 30*s.* per week	0	6
Hay-time, 30*s.* per week	0	6
Mangold, hedging, and other piece-work	0	3
	13	0

Besides extra cider in haymaking and harvest.

Carter, extra per week in cash 1*s.*, and house rent-free; 1*s.* 6*d.* in money instead of cider; but no grist corn. Carter does harvest and hay work, but not often piece-work.

(5.) Statement of wages paid by *Mr. Corner*, Manor Farm.—(356A. 3R. 17P.).

	s.	*d.*
Weekly wages in cash	8	0
Cider, per week	1	3
Grist corn, half a bushel per week (not compelled to have it)	0	6
Straw for pig	—	
Extra wages during harvest=1*s.* per week all the year	1	0
Cutting about 50 acres of grass at 2*s.* per acre, about 8 days, 3 men=6*d.* per week with extra cider	0	6
Hoeing mangolds and turnips, and other task-work, say	0	3
House rent 1*s.* charged, as against 1*s.* 6*d.*	0	6
Total	12	0

(Besides firing for cutting; hauled; use of horse and cart at any time).

	s.	*d.*
Carter, in cash	9	0
House rent free	1	6
Grist corn	—	
Cider	0	6
Carter cutting corn and carrying during harvest and hay-time, with extra cider	1	4
Use of horse and cart, and firing for cutting	0	6
Potato ground, about 14 yards at 1*s.*, say per week	0	3
	13	1

63. *Mr. Corner*, occupier, Wellington.—Boys begin at 10, bird-keeping; the Board of Guardians consider that boys above 10 ought to work, and no relief is allowed after that age. Almost all their work when very young is bird-keeping; there is little plough-

driving now, that being done by reins. If deserving they get regular work, they are chiefly the farmer's own labourers' children. Those who begin early make the best labourers, those who begin a few years later are lazy and do not take to it. Prefers a moderately educated labourer, but would like all to read and write. It is a different intelligence from school intelligence that is needed for machinery, school intelligence is no use for that. You cannot apply the factory restrictions to agriculture; for instance, at the factories in Wellington they leave off work at 2 on Saturday afternoon; you could not do that in haytime with Sunday coming. There are good schools, and all can take advantage of them; only stopped by parents not caring; but there is ample school accommodation for all.

Mr. Corner employs no girls, nor is it usual to employ them in the neighbourhood, they find work in the factories. It is difficult even to get female servants; they prefer dress-making, which gives them a sort of independence, and that leads to what's worse. It is a consequence of over-education. The factory girls make the worst poor men's wives. Women are employed to a limited extent, but it is getting more difficult to get them to go out; they are much taken away by the factories. They work 7 a.m. to 6 p.m., longer than in most places, men and boys 6 a.m. to 6 p.m. The women who work in the fields keep their cottages just as clean as others. The cottages are not as good as they should be; should all have three rooms. Has himself added one room to a one-bedded cottage himself. Lodgers should not be allowed. Laid stress on the case of Priscilla Biggadyke, who was hung for murder; she lived in one room with her husband, three children, and two lodgers.

	s.	*d.*
Wages of an ordinary labourer, in cash -	9	0
and liquor = 1*s.* 6*d.*, and most of them take money in preference - -	1	6

But most men are on task-work; at a hard job, such as draining, they can earn 2*s.* 6*d.* a day = 15*s.* a week; deduct wear and tear of tools, and would = 12*s.* (Mr. Sanford put it at 11*s.*) The carter and shepherd have regular wages, as they do no job-work.

The shepherd receives 1*s.* 9*d.* a day cash, = 10*s.* 6*d.* a week, and cider 1*s.* 6*d.* per week; three pecks of corn per week, has a large family and likes corn, but most do not; cottage, rent-free; 40 yards of potato ground.

(Mr. Corner holds under Mr. Ayshford Sanford, Nynehead.)

64. *Mr. Bailey*, Nynehead, occupies 350 acres under Mr. Sanford.—Employs boys from 10 years old upwards; finds most work for them in summer. They come out thinning turnips with their parents. Employs no very young girls; one unmarried woman aged 24, she has an enlargement of the neck, and does light work all the year round. A very good girl. The work is given rather as a favour; she is the only girl we have ever employed. She is really better protected than in a town, as she works with her brothers.

Employs three married women, all the year at 9*d.* or 10*d.* a day. The custom is to give 8*d.* and cider, and they like it best; a farmer would rather give money. The women who go to work have the best and tidiest cottages; it is not a bad thing in any way, and there is no immorality due to it. There is none in the parish. The women do piece-work generally. They work 8 a.m. to 5 p.m., men and boys 6 a.m. to 6 p.m. No one has to go a quarter of a mile to his work.

Shepherd's wages:—

11*s.* in cash.
House and garden (a quarter of an acre).
2 quarts a day of cider.
Meat through haymaking and harvest, and what he can drink.

Has done away the custom of giving grist corn. It used to be given, now there is an advance in wages instead.

65. *Mr. Davis*, occupier, Preston, Milverton.—Employs two boys, aged 12 or 13, driving horses; does not like younger boys. They have been to school, and can read; they still go on Sunday. Every labourer should read and write; most of those who are educated beyond that go away, and are of no use to the parish. Employs one girl 11 years of age, she works with her mother and is sizing turnips. She does not work with the lads; she is a good girl; has no father, and her mother asked for work for her. When a little older will probably go to service. Has seen a lot of girls working up at Mr. Handcock's farm at Halse (*see* Taunton Union); they go out occasionally with their parents. Mr. Davis employs two women. He has three cottages on his farm, two with three bed-rooms, one with two; not enough cottages. Some of his labourers come from Milverton.

Wages, 9*s.* and cider. Gives a cottage at 1*s.* a week, worth really 4*l.* a year; so wages are really 8*s.* a week, cottage, and cider. In other parts of the same parish 8*s.* is given.

Good farmers prefer giving piece-work, they get the work better and more quickly done. One disadvantage of it is, however, that Milverton people, being very fond of cider, will often after making some little money by piece-work stay out of work for a bit drinking. Formerly all work was by the week. They can easily earn 2*s.* a day at it. Mowing is done at the rate of 2*s.* 6*d.* an acre; a man working a long day can mow two acres. Putting down day-work and piece-work together you may strike an average and say a man earns 12*s.* to 13*s.* a week. Some will take money instead of cider, but not many; they cannot get the cider so cheap elsewhere.

66. *Mr. Fry*, occupier, Sampford Arundel.—Employs only one boy; they are not required so much as they used to be, now that reins are more used for ploughing. In bird-keeping too a boy is really not much good, if he scares the birds from one field they will only fly to the next. Twining a field is a much better system; or to cut up a rook and scatter a wing there and a leg here will keep the others off some time. Has only one woman employed on the farm; rather finds the want of women, as he often has to give men double as much money for doing what a woman could no. The wages are not high, but their husbands can make enough to keep them. They are better off than in many a higher paid part, because they get so many perquisites; they get fuel and turf for nothing, turf being cut on the hills (Blackdown Hills). Most of them live on the land. Wages 9*s.* to 12*s.* and cider. Gives his shepherd a cottage; most of the others pay 1*s.* a week for theirs. They have mostly good gardens. Has two cottages on the hill with three bed-rooms each, kitchen, back room, and pigsty, and charges 1*s.* a week.

67. *Mr. Farrant*, occupier, Hemiock.—Boys are not much employed here, except to lead the plough, with cows, &c.; as such they are called indoor servants, for though working out they live in the farmhouse; such boys very in age from 11 to 16. Complains much of the young men going away so much. Scarcely an unmarried woman goes out at all; recollects that 30 years ago they did; they go out to service more now, and seem not to like going into the fields. Few women work in the fields; most of them would starve rather than work; there is not one employed on this farm. It has not been the custom in this country of late years, though it used to be very much so formerly. It is partly owing to the husband getting better wages; and besides this a woman can generally get washing or sewing at home, which pays better, and which she prefers.

Wages, 9*s.* and cider; there has been rather a move up this year; food is given in hay and harvest time; for himself he prefers giving job-work; some of his men prefer it, others do not. They have to pay for their cottages, out of the 9*s.*, 1*s.* a week. There is not much the matter with the cottages, though few

Somersetshire.
Mr. Boyle.
k.

have more than two bed-rooms; their situation is handy, rent low, and there is no want of them, principally owing to the diminution of the population that is going on.

Complains much of the beer-shops.

68. *Mr. Manley*, occupier, Mill Hayes.—Employs boys of the ages of 12 to 14. Has one little scrub boy living in the house, who gets 6*d.* per week. You cannot get girls to work in the parish; not one in 20 is worth anything; they like fancy work, dress-making, and bonnet-making, which they bring home to their cottages to do. Employs one work-woman, very few are employed now, they are not to be got. Remembers many more working; never had any good harvests since it went out.

"It would frighten you to see the wages I sometimes "pay, 40*s* to 50*s*. a week." (Mr. Fox, the proprietor of the great factory at Wellington, which employs 600 hands, had kindly accompanied me.) Wages 9*s*., and cider; reckons each man costs him 12*s*. a week, out of which he has to pay 1*s*. for cottage rent. The cottages are improving, and have good gardens, has himself none with less than two bed-rooms.

(The above three gentlemen, Messrs. Fry, Farrant, and Manley, live on the borders of Devon, on the slopes of the Blackdown Hills, the two latter on the Devonshire side, but in Wellington Union.)

69. *Mr. Langdon*, Chilworthy, Raddington, farms 600 acres, partly pasture, partly arable; has also a farm at Chipstable.—In his parish there are very good schools, and boys are not much required in out-door labour, consequently they do not come out till 12 or 13 years of age, and are all educated till then. Employs four or five married women, chiefly in summer; weeding and harvesting the chief employments, they get 8*d*. a day and cider. Women with young children do not go out to work; all the rest like to go out, it adds to the husbands' wages, and improves their own health. There is no glove-making or other employment for them. They would not be happy unless they went out. An able-bodied woman in one of his cottages, if he did not give her employment, would come and tell him she could get it elsewhere. They work from 8 a.m. to 5 p.m., boys same hours as men.

Wages, farm labourer :—
9*s*. a week cash.
Cider.
1*s*. of grist corn at a reduced price.
30 square yards of land.
Run of a pig, and keep of poultry on pasture.

They have to pay for their cottages; he would willingly give 12*s*. a week in lieu of perquisites.

Has 13 cottages, and no one goes more than half a mile to a mile to work. They are mostly good cottages, some have three bed-rooms, none less than two. All are stone and slate (and so in the neighbourhood), mostly lately built. There are only two thatched cottages. Six are leased to him with the land, five are his own. He does not allow lodgers.

70. *Mr. Norman*, Wiveliscombe, occupier.—There are a lot of boys in the parish employed in the fields; they get them out as early as possible, say 11 or 12, to do light work, such as looking after sheep. Little boys go out to scare crows, but not much under 11. They begin at 3*d*. or 4*d*. a day, and work up. There are good schools, and as far as is consistent with early labour, people are not careless about sending their children. There are no girls working out except in haymaking; married women are much employed, regularly all the year round; they receive 8*d*. a day. They are in no way inferior in character or other respects to other women. On a farm of 150 or 200 acres there are usually two or three employed; it is a large parish purely dependent on agriculture, so there is nothing else for the women to do. They can get a certain amount of charing and washing, but this is not enough to fall back upon if the husband dies. It gives Mr. Norman (who is P. L. G.) a great deal of trouble in the union. For men there is plenty of work; women work 8 a.m. to 5 p.m., boys the same hours as men. In the present state of affairs would not restrict the employment of boys or women.

71. *Robert Featherstone*, overseer, Wiveliscombe.—Boys are employed all the year round from the age of 9 upwards. But some of their employments have much gone out in this neighbourhood; for instance, keeping crows, which used to last seven months formerly; now twine is used a good deal to keep out the rooks, and a man going up to the field with a gun now and then does as much good as a boy there all day. A peck more of wheat sown does more good than a boy who walks about the field. Leading horses has gone out a good deal too, reins being much used, as the soil is light and you can plough with two horses. Boys ought to be kept from work till 12; owing to early labour, and also from the negligence of parents, some do not take advantage of education at all.

From 80 to 100 women in the parish (population 2,760) are employed in agriculture; they are chiefly married; but there are some who have had a misfortune, perhaps half a dozen who have love children, and work out too. Besides this some younger girls of the ages of 12 to 16 pick stones, weed, &c. There is an average perhaps of one woman regularly employed to 100 acres. About half of the number who work, work regularly all the year round, the rest go out on a job now and then. They are generally respectable; but one great disadvantage is that when the mother goes out to work, an elder child is kept at home, usually a girl, to look after the younger ones, and loses her schooling. Most girls go out to service, a good many have gone away of late years to Taunton and Weston.

Wages: The lowest wages in the district are at Brompton Ralph, where some get 8*s*. a week without a house; it is so low nowhere else, and the men work generally by task-work. Wages always have been low; don't know why, and yet the labourers seem to stay there. There is no resident gentleman. Fitzhead is little better. At Wiveliscombe itself the lowest wages are 8*s*., and all who have not a cottage too have perquisites.

Labourers wages at Wiveliscombe :—
In cash, 8*s*.
Cottage (in some cases, not in others).
Cider.
Pick the firing off the farm, generally as much as they want.
Grist corn at 6*s*. the bushel; no gain, as it is the average price, but in hard times of course it is an advantage.
Run of a pig, tailings in the winnowing, and get a a few turnips.

Reckoned at an average of 10*s*. a week. Shepherds get perhaps 1*s*. a week more. It is difficult to see how they get on, but somehow they do. At —— they say they get on by cheating doctor, stealing firing, and begging clothing.

Fitzhead has the best cottages in the district, they are mostly stone and thatch. At Wiveliscombe it is thought enough to have two bed-rooms in a cottage, few cottages have more. In this parish there are plenty of large families all sleeping in one bed-room. It is strange, but the crowding of cottages does not seem to have a bad effect on the character of girls; there is more freedom of manners among them, and they are not so easily shocked; would not say it leads to bad consequences. There may be 10 such cottages; they will generally put a curtain across, and the bed-room is generally large, and divides easily. There was one cottage in which lived a man and his wife, two sons, and two daughters, all in one bed-room. The eldest girl was 15, and Mr. Featherstone had insisted on her going to service. The lodger system

is an evil; a man and his wife if they have only one bed-room will always take in a lodger. Mr. Handcock's cottages are the best; Lord Ashburton is improving his, but in the town cottage accommodation is rather going back.

72. *Mr. Morgan*, relieving officer, Wellington.—Boys are employed in the district from 9 till 11 years of age; each farmer employs a few regular boys. At 13 or 14 they are taken as in-door servants. In this union the rule is that no relief is given for boys older than 10, so they have to go out to work.

Does not know of a girl employed; they generally go out and become nurses at 13 or 14.

Married women's employment too is going out very much, attributes it to the introduction of machinery. There is no regular female labour in the country districts, but they are employed for a few months in the summer. Knows of a case in Burlescombe (Devon) of a woman who tends sheep, and cuts turnips all the winter. There are not a dozen who go out from this parish; in Buckland St. Mary, though it is purely agricultural (a small parish), not above half a dozen. Agricultural women bear as good a charater as any. Mr. Morgan speaks from his own knowledge of his father's farm, where they had three very honest women employed. One of them worked 46 years on the farm, and was as good as any man. We have cases of men taking task-work, and women going out to help them.

73. *Mr. Flood*, relieving officer, Milverton.—Guardians do not relieve children after 10 years of age, they expect them to go out to work; finds a few girls employed, but not regularly, in apple-picking and that sort of thing. Most of them take to gloving, but that is not a very profitable employment, as they only earn 5*d.* a day at it. They like the independence of it, and unfortunately a good many turn out bad, one in five perhaps. They take a room not in the parents' house to work in; sometimes several join to do so.

There are generally two or three women employed on a large farm, where they are kept on regularly; reckons glovers more slatternly than the women who work out in the field. There are always enough servants, but a scarcity of good.

People live in Milverton and go out to work in neighbouring parishes, such as Fitzhead, Halse, and Oak, where cottages are few; some of them go three miles. In all these parishes there are many yeomen who cannot afford to build cottages, so people have to come far.

Reckons Wivesliscombe and Chipstable poor parishes; few paupers come from Raddington (small parish).

The cottages in the district generally have four rooms; very few more, except in small parishes, which are better taken care of. In large parishes like Milverton and Wiveliscombe, where the population is crowded, often find a family huddling in one room with only a screen between the grown-up children and parents. When, however, parents are with children little harm comes, the bad cases arise when lodgers are admitted. Water is good, ventilation bad.

74. Cottages in Milverton (population 1,895).—Extract from Diary, Jan. 26, 1869 :—

Visited Houndsmoor, a hamlet a quarter of a mile distant, where the worst cottages are supposed to be. Mr. Dwyer owns most, and he not being a rich man cannot afford to repair, and can with difficulty get his rent even, 1*s.* 3*d.* or 1*s.* 6*d.* per week. The two worst were at the end of a row that branched off at right angles to the road, and were unoccupied. They consisted of only two rooms each. There did not appear, however, to be any very great overcrowding, most of the cottages having two bed-rooms, but dark, ill ventilated, and badly kept. One inhabited by an old man was very wretched.

75. Cottages in Wiveliscombe (population 2,060).

(1.) —— *Poole.*—A man and his wife, have two rooms, very bad; pay 1*s.* 6*d.*

(2.) —— *Shopland.*—A man and his wife and three children, live in two rooms, very bad cottage; rent as above, 1*s.* 6*d.* per week.

(3.) *Samuel Greedy.*—A man and wife, and five children, of whom the eldest is a boy of 15, and the youngest a baby; one boy is deformed. The oldest girl is 12½. They have only one bed-room for the seven. The landlord is Stephen Ridge, who keeps a china shop; rent 1*s.* 6*d.* per week.

(4.) *Mary Ann Jones.*—A widow with five children, the eldest a girl of 13. Has one sitting-room downstairs, and two bed-rooms above. Her house tidy, but dilapidated, and she complained much of the water coming down the chimney, and out into the room when it rained. It belongs to Mr. Handcock, but has only just come into his hands, and is to be improved. Rent 1*s.*

(5.) *William Brown.*—Husband, wife, and one boy; only one bedroom.

(6.) *John Smith*, marine store dealer.—Two very small rooms below, the biggest not 10 feet square, two bed-rooms above. Father, mother, and five children live in it, the eldest boy 15, the eldest girl 7; a very much larger family has been brought up here, but the elder ones are away.

(7.) *John Stoop.*—Lived in one of the brewery cottages, belonging to Mr. Handcock: stone and slate, and built on the road: had two bed-rooms; six children, of whom the eldest was 12; (specimen of many such.)

(8.) — *Paine.*—Husband, wife, and one child, one room above. Rent 3*l.* 10*s.* Landlord Mr. Hawkins.

(9.) *John Chapman.*—Husband, wife, and two children; two rooms above, one big room below. Rent 4*l.* 10*s.*

(10.) *John Perry.*—Was out to work with his wife, only saw one of his boys, age nearly 14; has been at school, and since then has been out to work three years. Cottage is only one story, two rooms, 1 bed-room, and lies detached at the end of a path. Rent 15*d.* per week. Father, mother, and two boys live in it; all the family that are at home; there are two elder ones (daughters) out at service.

(11.) *George Millett.*—Lives in his own cottage (is a shoemaker); has one good room below, and two bed-rooms above. There are only three children at home with himself and wife now. They have had 17 children, of whom 10 are living; never more than eight at home together.

76. N.B. — Handcock, Esq., to whose kindness I am indebted for being put in the way of getting my information about Wiveliscombe, agreed with Messrs. Featherstone and Flood, in thinking this the worst parish in the neighbourhood. The cottages, except the brewery cottages, are bad, few having two bed-rooms, and none three. I did not find any large families at present resident; it appears that in such cases the girls go out to service, and many boys go away to other parts. Some of the girls may come home with child, either by a farmer or by some labourer; in the latter case, the labourer often marries her, not always; if he does not, she usually comes home to be confined, and tries to get other work after her confinement, such as gloving, or sometimes field-work, for she cannot get into service; she then allows her parents something for the care of the child. Morals seem worse here than in the neighbourhood, and education not sufficiently taken care of. Many of the parents are an idle set, who do not care about sending their children to school. (Diary, Jan. 29, 1869.) There are a good many illegitimate children in the town. In one cottage, Mr. Flood, the relieving officer, (who was good enough to come over from Milverton, to show me some of the Wiveliscombe cottages,) showed me a lot of children, under the care of a young woman,

Somersetshire. — Mr. Boyle. — k.

while their parents were out to work, and said, that to his own knowledge, four of them were bastards. (See also the evidence of Mr. Lucas, the schoolmaster, No. 79, below.)

77. Cottages at Nynehead (population 321), parish belonging to E. A. Sanford, Esq.—There are few large families in the parish, and there is no overcrowding. Most cottages have at least two bed-rooms, many are built of mud, which is always warm, and thatched, but any repaired are repaired with stone and slate, and the mud houses are gradually going out. Mr. Sanford took me into that inhabited by the poorest family in the village, a husband, wife, and 9 children. There are three bed-rooms upstairs, and downstairs one big kitchen, and a back room, which might be made into a scullery, but is used as a wood-store.

78. *Rev. Richard W. Lambert* (Vicar of Fitzhead, population 496, acreage 1,721A. 3R. 27P.)—"Boys in the parish generally are employed at the age of 8 in the spring, keeping birds from the newly-sown corn, and helping parents to plant potatoes, in the summer minding pigs or sheep, in the autumn picking up apples or potatoes, or looking after pigs, sheep, or such like work; when older they drive plough. They should not be allowed to begin 'for actual work' before 9 years of age; but at 8 years of age they might be employed in some seasons in picking up potatoes, apples, keeping birds off corn in summer, or watching sheep; but I believe they gain nothing by such employment, though farmers find advantages from their services.

"I do not know of any girls so employed except in haymaking time; there may be very few, in leasing or gleaning on their own account for three weeks or a month; many go out with their mothers to glean, but a large proportion of girls are constantly employed in making gloves. Not 10 women are employed in the whole parish; in the spring or autumn, setting potatoes or planting beans, in haymaking, and binding corn in harvest time; also weeding beans or wheat, or hoeing teasles; the majority make gloves. It is decidedly desirable to restrict their employment. I have lived in this district nearly 30 years, and I am confident that the employment of females in agriculture is prejudicial to their best interests; where mothers work in agriculture, their children are necessarily neglected, their cottages are not kept as they ought to be kept, discomfort prevailing. Most women who engage in such work, say they know it does not benefit them, but husbands think they ought to earn something in this way, and so they go; but for every 6*d.* earned, they lose 1*s.*

"There is a very good daily national school kept by a certificated master and his wife; many do not take advantage of it. I think many more would send children to school if the charge were reduced; I certainly think that great advantage would arise to the poor, if in small parishes an efficient master or mistress could obtain a certain salary, which would enable them to take children at 1*d.* per week.

"The condition of the cottages is generally good, with some few exceptions of extraordinary character, the property of the residents. The pavement of many old cottages is bad, so bad, that if washed on Saturday, it cannot be dry before Monday or Tuesday, the consequence of this is rheumatism, and other ailments; a wet cottage on Sunday drives the labourer elsewhere; nearly all have good gardens, and three are many cottage allotments. I let off my glebe 22 allotments of one-eighth of an acre each, and another field of four acres is let in subdivisions; but there is great difficulty in getting the rent."

79. *Edwin Lucas*, schoolmaster, Wiveliscombe (consisting of town, population 1,800; hamlets of Ford, Croford, Whitefield, Langley, and Moundown, total population, about 2,700.)

N.B. "I would draw attention to young girls "being sent out to nurse children, and do the drudgery "of small tradesmen's houses, under 13 years of age. "The Workshops Act does not touch either them or "errand boys at small shops. The small tradesmen "also think the national school too vulgar for their "children, especially girls, esteeming fancy work pre-"ferable to a sound elementary education." The girls attend less well than the boys, many being taken away at 8 or 9 to nurse children, either for their parents out at work in the fields, or for other people in like employment.

The Miss Featherstones keep a night school, to which both boys and girls go; but unless they do that, they never learn anything after leaving day-school. Writing is principally taught, a little reading and arithmetic. It is open 20 weeks in the winter for an hour two nights a week, and there are 60 to 70 scholars. It is very inadequate to supply the deficiencies of the day-school. "I have often had to go to a house for the annual subscription of 1*s.*" The chief difficulties are "inadequate subscriptions, the bigotry of the farmers, the want of an assistant in the day-school, to be available for the evening." There are from 300 to 400 young people growing up with insufficient education. "In some instances they "may be able to write a little, generally read the "easiest part of the Bible, but no arithmetic, &c. "Make the attendance at a national night-school com-"pulsory, instead of the day; I see no reason why "night schools should be closed in summer other "than day schools." Not a farmer, with but one exception, subscribes to the national school. Mr. Howard, the school inspector, on his first visit after Mr. Lucas came 8 years ago, said, "this school is very "ignorant."

Mr. Lucas is very strong against female employment in agriculture. "They lose their delicacy, "which is followed by loss of chastity; young lads "become old men in immorality; of all employment "it is the worst for the union of the sexes. It "undermines the health of the mother of a family, "tramping the wet fields, digging the frozen roots "for the sheep, weeding the same. The old coat or "jacket of the husband is coming much in vogue. It "hardens the finer feeling of the women, they "neglect home duties, their children roam the roads "and fields, unkempt and uncared for. The older "nurse, mostly generally neglecting the younger, "dwarfing their stature, damping their vivacity by "the care devolving on them, beside the detriment "to the younger from bad nursing and long hours "without food. Till the wages of the labourers "are raised, I cannot see how, with a family,

"her earnings can be dispensed with; 6*d.* to 8*d.* "a day. What is 7*s.* or 8*s.* for a family? It will "barely suffice for bread. One penny for each meal, "and three meals a day, is little enough. I would "prohibit female labour altogether except in harvest. "Education is in my opinion perfectly thrown away, "when there is no parent to carry it on at home. "Tired, jaded, perhaps her washing to do; what "can you expect from a woman? (!)

"Children should not be employed under 13 "years of age, nor have to walk more than one mile. "If sent to work between 10 and 13, certainly not "more than five hours in summer, and none in *winter* "*months.*" There are 100 to 150 children, quite uneducated, owing to the apathy of their parents chiefly.

"The cottage accommodation is most demoral- "ising. What can you expect from a father and "mother in one bed, three or four boys in another, "two or three girls in another, all in the same "room? Beds they cannot be called, their clothing, "which they have just taken off their principal mode "of warmth. . . , . . Till very lately, I knew a "group of three cottages, with only one bed-room "in each, containing 27 souls." They are crowded chiefly "with members of a family, a few lodgers, "from those who came to work in the slate quarry." They are built with cob-walls, thatch, limestone floor beneath. Ground floor contains one living-room, from 10 to 12 feet square, and a little back house, in one of which the oven is situate for baking. The stairs open with a hand-rail on entering the bed-room; if two bed-rooms (rare even in the town for farm labourers), generally the second is a sort of closet or cupboard; ventilation only the diamond-shaped glazed windows. Water from the stream, or by well in the country. Generally owned by the landowner, the rent being invariably kept back out of the weekly wages by the farmer; garden fair in the country, rent 1*s.* to 1*s.* 6*d.* The Union Chargeability Act is doing little to increase accommodation. "It should "be incumbent on landowners not to build cottages "with less than two bed-rooms, on large estates "three. A cheap building society under the security "of the state, would be a good plan both in town "and country. But I doubt if the farmer would "give more wages. 'There is 7*s.* a week, and a "house, live in it or not.'"

80. *Richard Berry*, Scripture reader, Thorne St. Margaret's (population 144)—In this small parish there are three able-bodied women who work out; all would who can, but the number happens to be small at present. They bear as good a character as other women, and keep their cottages as tidy.

No girls are employed, one works at Wellington in the factory. They stay at school till old enough to go to service, generally at about 15.

Four or five boys are employed; the youngest aged 11. Small boys used to be much employed for bird-keeping, but does not go on so much now. They have forgotten a great deal, when they come back to school, and if taken away for good very early, they soon forget everything. The Sunday school makes some amends; there is no evening school.

There are 50 children in the day-school.
25 „ „ Sunday-school.

The cottages are moderately good, but not in a very good state; but being improved; gardens good, about 15 yards on an average. Three cottages have three bed-rooms, two bed-rooms and an attic. Largest family seven, but three of the children out at service. The three at home are all under 8. No lodgers in the village, except one old pauper.

Taunton Union.

I.—*Parishes north of Taunton, and in the Vale of Taunton Deane.*

81. *R. King Meade King, Esq.*, chairman of Board of Guardians, Walford, Taunton.—"Women, both married and single, are employed in agriculture generally throughout the Taunton Union, as well, as I believe, in other parts of West Somerset, at wages varying from 8*d.* to 1*s.* per day, with an allowance of two pints of cider, when employed at day-work, and at wages somewhat higher when at task-work. The hours of work are usually from 8 a.m. to 5 or 6 p.m., allowing an interval of an hour for dinner. The work consists of for the most part—

Weeding and stone picking in the spring;
Weeding, haymaking, and harvesting in the summer;
Turnip hoeing and thinning (lately much practised by women on the light soils), drawing turnips and other roots and cleaning them, digging potatoes, and apple picking, in the autumn; and a little occasional work of the above description in the winter.

"Young girls, as a rule, are not employed in agriculture; those who are not at school are kept at home by their mothers, who are at work, to do the household work, and superintend the family during their mother's absence. The work performed by women is such as is suited to their strength, age, and sex, and in no way detrimental to them, either physically or morally; I should say in some cases rather the contrary. Girls above 12 are usually placed at service by their parents, generally commencing in farm-houses at very small wages, frequently nothing beyond their maintenance for the first twelvemonth; others are placed with dressmakers, and many of late in this neighbourhood learn gloving, which they do at home with their mothers, and this often increases the earnings of the family more than by farm work. Boys as well as girls are, as a rule, kept at school until 10 years of age, but there are very many exceptions, the parents being tempted to profit by the few pence per week, which the stronger of their boys under that age are capable of earning by scaring birds, driving teams of oxen and horses as plough boys, and other analogous work. It may be here remarked that 10 years is the age prescribed by board of guardians, at which it is expected that both boys and girls should earn something by their labour; and with respect to boys it is found by experience that it is not too early for them to be initiated into some of the multifarious occupations of the farm. The wages of boys in agriculture from 10 to 14 vary from 3*d.* to 6*d.* or 8*d.* per day, with an allowance of cider. There is but little schooling after 10 years of age, a want which perhaps more than any other needs to be supplied, especially when it is borne in mind that even under that age the attendance at school is not as regular as it should be. This is not entirely attributable to the inability of the parents to pay the cost of schooling, for during my experience as chairman of the Taunton Union I cannot recollect a single application on the part of any poor person for relief for the purpose of enabling him to provide education for a child under 16, pursuant to the provisions of the statute 18 & 19 Vict. c. 34. I am not an advocate for a system of compulsory education, but with respect to boys employed in agriculture between the ages of 10 and 14, I think somewhat analogous provisions to those in the Factory Acts for providing attendance at school may with advantage be applied to them. I am aware of the difficulties attendant on any system which seeks to combine partial work and schooling in rural districts, especially when the population is scattered and schools far apart; but I think these difficulties may be overcome by the aid of night schools established under good regulations of inspection.

"R. King Meade King."

"Walford, Taunton,
19 Jan. 1869."

82. *C. Smith, Esq.*, Bishop's Lydeard (to whose kindness I am indebted for most of my information about this neighbourhood).—Farms himself, and employs two women regularly, besides women in the garden, which is large, and requires a good deal of labour, and these same women milk the cows. It is a purely agricultural district, and there is no other employment

Somersetshire.
Mr. Boyle.
k.

for women, so that they would think it a great hardship if they were not permitted to work out in the fields. Though bad for them they like it a great deal better than home work. The state of morality in the parish and neighbourhood generally is bad, and Mr. Smith complains that many affiliation cases come before him, some very bad ones, women in their employment having children by young farmers. If the father is in the same class of life, it appears to be considered very much a point of honour for the young people to marry; but if it be a young farmer and a serving woman the case is different. (While I was at Bishop's Lydeard a very bad case came before the magistrates of a girl of only 15 in a neighbouring parish giving birth to a child under very distressing circumstances. She swore it on a boy of very much her own age.)

83. *Henry John Pearce*, Bishop's Lydeard, relieving officer.—There are 12 parishes in this district of Taunton union. Some boys are employed at 8, but very few under 10. The usual thing is bird-keeping; after 10 they go with horses. Very seldom have more than perhaps an accident a year from their being put so young to mind big horses, and that is generally from riding on the shafts. It is a heavy soil, and three horses are required to plough, so a little boy is required to lead them; but the farmers are trying to get into using reins.

Very few little girls are employed, and they in little beyond apple picking. Do not know what they do; a great many idle. Mr. Pearce is trying to get gloving started, so as to find them occupation and a means of earning a little money. From 10 to 15 they go out to service, to look after children; a good many to service in Taunton.

A good many women work out in this district. It would be better if they did not; they would save a deal of money, as they wear out so many clothes, require more food, and the children get into mischief, and break things while they are out. There is more poverty among them generally than elsewhere; their homes are neglected, and the elder children kept at home to look after the younger. They do not work regularly, but go out to work when required, and in many cases in busy times they are expected to do so; they are generally labourers' wives. Knows one case in Combe Florey where it is made a sine qua non the labourer's wife should work, and they have actually to turn out of their cottage if she does not work. Premiums are given in Bishop's Lydeard for excellence in agricultural labour in its various forms; they are open to four parishes, Bishop's Lydeard, Combe Florey, Ash Priors, and Bayborough. One of these is given for girls who work out in the fields under the age of 20; no one came to claim it this year. There are two premiums given to women; four came to compete. The one who had served longest had served 33 years; the average length of service was 20 years. You never find that young people like working out.

The most ordinary case of bastardy is with in-door servants, *i.e.*, not necessarily girls who work in-doors, but who live in the farm-house, and go out to milk cows, &c. There are scores of illegitimate children in the district; Lydeard St. Lawrence is the worst; this place is bad. At Ash Priors are the most cottages and most crowding. Bad affiliation case from there to-day (*see* above, No. 82), a girl of 15 and a boy of the same age. (1.) Family name Woodbury, and there live in the cottage in only one bed-room, father, mother, and five children, of whom three girls, aged respectively 16, 14, and 6, and two boys aged 10 and 8.

(2.) Newick, Ash Priors.—10 in one house. There may be two bed-rooms, but doubt it; if there are even it is great crowding, father and mother, three boys aged 12, 10, and 8; the rest girls, of whom the eldest is 17.

(3.) Rackley, Bishop's Lydeard.—Two rooms, one bed-room; five in the house, father, mother, a daughter of 15, and two boys aged respectively 16 and 12.

(4.) William Thorne, Chapel Lane, Bishop's Lydeard.—Two rooms; husband, wife, and five children. All boys, so only crowding to be complained of.

(5.) Rogers, Bishop's Lydeard.—A man and his wife, and a boy of 10 years old; also another woman, daughter of the wife, and three illegitimate children.

(6.) Thomas Brown, Halse.—Certainly not more than two bed-rooms, containing a man and his wife and six or seven children, of whom one is a daughter with an illegitimate child; also an old man, the father of Mrs. Brown.

(7.) ——, Common Down, Halse parish.—Upstairs only a room and a cupboard. Cottage contains three old people, a man and two women, besides a man and wife and six children.

At Heathfield and Bagborough too many cottages are bad.

84. — *Pavey*, assistant overseer, Bishop's Lydeard.—Children begin to keep birds in the district at 8 or 9 years of age; they get 3*d.* The next work is driving horses, at which they begin by receiving 4*d.*, and the pay rises from year to year. Bird-keeping goes on in autumn and spring. Women do not like work as well as they used to. Where the farm labourers have cottages on the farm nearly all the women go out, but those who live in the village and go out to farms do not do so, as they get other things to do, such as washing, &c. They get 8*d.* or 9*d.* a day. Some labourers get no more than 8*s.* a week and liquor, some 9*s.* and liquor. Mr. Smith gives 10*s.* and no cider.

The cottages are under various owners; those in Vicarage Lane are held under the alms-house trust. Some of them are let at 1*s.* a week, most at 3*l.* a year. Most of them have two bed-rooms, some only one. One or two of them are crowded. Parkman has six children at home, and his cottage is in bad repair. Most of Sir John Lethbridge's are better; rent 4*l.* to 5*l.* Chapel Place belongs to Mr. Cooksley, who was a carpenter, then relieving officer, who made a little money and bought cottages. His cottages let at 1*s.* a week; they have only one bed-room, but sometimes, where there are families, two cottages are thrown together and let for 1*s.* 6*d.*

85. *Mr. Follett*, occupier, Bishop's Lydeard.—(Mr. Follett was thrashing his corn when I had an interview with him.) Hires the machine from Mr. Hollins over the hill (Quantock), and gives 9*l.* 10*s.* for the job of thrashing out all his corn. For this Mr. Hollins supplies labour, and pays everything. Mr. Hollins gives 1*s.* 4*d.* a day to his men and cider for working at this job, which comes to 8*s.* a week and cider. Some of Mr. Follett's men work too, but they are paid by Mr. Hollins. Mr. Hollins's own sons work, and that is a daughter of his up on the machine feeding it. Mr. Follett holds of the Lethbridge trustees; he is a butcher as well as a farmer. He gives his men 9*s.* 6*d.* a week, and three pints of drink. Does not care about employing women, thinks them of no use except for a little weeding and turnip-cutting. It is a great pity that it is the custom of the country to give all labourers the same wages; one man is often worth twice as much as another, and yet you have to pay him exactly the same. That man there is worth 12*s.* a week to me, and I give him the same as another who is not worth 5*s.* As a rule the men are very lazy; they want watching, or they do not do their work. They have changed very much of late years, being so much more independent than they used to be. It is the effect of the rise in wages.

86. *Adolphus Allen*, schoolmaster, Bishop's Lydeard.—Has been here 13 months. The school is not under Government. Number of children on books 97; 20 infants. Average attendance 60 to 70.

Has known six boys go away at 7 or 8 to work on the farms. Has not heard that they will come back again to school at all. Sometimes they go for a few weeks to pick apples, potatoes, &c., and then come back again. Boys generally go away for good at about 12, but it must be remembered that in a large

village a large proportion are the children of small tradesmen, &c. The oldest boy in the school is aged 13; he is the son of the inspector. The oldest labourer's boy is 11 (George Lock).

The oldest girl is a coachman's child, aged 13; the oldest labourer's daughter is 11. Girls are kept at home a great deal because their mothers go out to work.

87. *George Lock*, aged 11.—Father is a labourer. Have been out in the fields, keeping birds. First went out a year and a half ago. Drive them off the corn by hallooing at them. Go out on Sundays all the same as other days. Hours 6.30 a.m. to 6 p.m. Have also kept sheep.

88. *Henry Wescott*, aged 7.—Kept birds for 12 months; hallooed at them. Got 2*s.* for it, and went out all the week, Sundays included. Like it very well. Got into a linhay when it rained. Took dinner with me, bread and meat; had supper when I came home, bread and meat, cider to drink. Like keeping birds better than coming to school. Brothers who work out are older than me.

89. *Mary Jane Harkell*, aged 12.—Father is a mason. Mother works out for Mr. Waller; goes now and then. Goes washing up sometimes. Am kept at home sometimes to take care of little brothers and sisters; got two, one aged 8 and the other 5. The oldest comes to school with me sometimes.

90. *Maria Hayes*, aged 10.—Father is a labourer. Mother goes out washing, and I stay to take care of the children. One of them is 7 years old, the other 4. Find I can take very good care of them. Come to school sometimes, and like it best.

91. *Mary Jane Chitty.*—Father carries letters, mother washes. I have three younger brothers, and stay at home sometimes to take care of them. Like coming to school best.

92. *Thomas Hole*, 17 next May.—First went out to work at 8. Went to regular work at 9, when began to lead horses. Horses used to knock me down sometimes, but never hurt me; trod on my feet now and then. First work was keeping birds, Sundays as well as week days. Hours 5.30 a.m. to 7 p.m. in barley sowing; wheat sowing 6.30 a.m. to 4.30 p.m., because the days are shorter. None in August. Was paid 4*d.* a day bird-keeping, and the same for ever so long after began regular work. Only had a dinner given me on Christmas Day. When I came home after being out in the rain had to dry myself as I best could at the fire; but often when it rained rigged up a hurdle with thatch to shelter me in the corner of a field. Never went to school at all. Have seven brothers and sisters, of whom two besides self have never been to school.

(N.B.—The above six children all belong to Bishop's Lydeard).

93. Cottages at Bishop's Lydeard belonging to Cecil Smith, Esq.

One row of cottages that looked very neat and nice, rather old, but in good repair, being strongly built of good red sandstone, were bought by Mr. Smith's father. Had two rooms below, two above. In the one into which Mr. Smith took me lived only a man and his wife and one child, who slept in one room, the staircase opening into it; the other bed-room is used as a store-room. He had another row of cottages at the back, built of the same stone, but smaller, only one room above and one below; still what rooms there were were spacious. In one we went into we found a woman and four children, but only two were her own, the other two she was taking care of for a woman who was working out in the fields. The cottage gardens are small, but improving, partly owing to the annual premiums now given. We went up to see a field of capital allotments, let out in quarters of an acre. It belongs to the alms-house charity. Close by is another allotment field belonging to the Sandhill estate (Sir J. Lethbridge's).

94. Return of wages earned by a woman working on Mr. Blackmore's farm at Bishop's Lydeard, from her own account and from Mr. Blackmore's.

Mr. Blackmore's.			*Her own account.*
Week ending:—	*s.*	*d.*	
Friday, Jan. 1, 1869	2	4	2*s.* 4*d.*
„ „ 8, „	2	0	No reckoning on that Friday through illness.
„ „ 15, „	3	8	Never earned so much in any week.
„ „ 22, „	No entry.		
„ „ 29, „	3	8	Never earned so much in any week.
„ Feb. 5, „	1	8	1*s.* 8*d*
„ „ 12, „	2	2	1*s.* 2*d.*
„ „ 19, „ and milk making up	3	1 6	3*s.* 1*d.*

95. *Mr. Hancock*, Halse, farms 480 acres under Dr. Phillips, of this three-fourths are arable.—Employs eight or nine boys all the year round; of these the youngest is 11, the rest very much the same age; they are employed at all times of the year. In July and August Mr. Hancock sends out a man into the village to get all the children, both boys and girls, he can find to come and single turnips; some come at 9 years old; they work in a row, and there is a man to look after them, who tells the younger ones what to do, if they fall behind the others; it is light work, and there is no unkindness used. Boys go younger to bird-keeping, but that is as often, if not more often, done by little girls, the boys generally getting regular work, such as keeping sheep or leading horses very soon. The girls will do such work till they go out to service at about 13 or 14. Bird-keeping is quite necessary, birds soon get accustomed to twine; but it is a good plan to shoot a rook and break him up, and scatter a wing here and a leg there. It is also a good plan, as Mr. Hancock does sometimes, to send a man with a gun if only with powder. But this is too great an expense, enough men cannot be spared. Mr. H. has three little girls in regular work on the farm, the youngest 10, the next 11, and the eldest 13 years of age; the last is just going away to service. Besides these in regular employ, other girls single turnips mixed with the boys. Employs no elder girls; one of the women who works is unmarried, but she is an old stager, about 50 years of age. If it is wet while they are bird-keeping, they have a hurdle and make a sort of hut, and sometimes light a fire; they sing a sort of rhyme to frighten the birds;—

"Get away, Jack carrion crow,
"Why do you use your master so?"

Has 7 women in regular employment, labourers' wives. They receive 8*d.* and a pint of cider a day. On an average in winter they will work four days a week, but in summer nearly every day. However, some are very irregular, and often do not come for some time, and then they begin at their discretion to come again. The more regular will often want a day for washing. Wet weather need not stop them; if it is raining there is always work to be done in-doors among the roots, &c. It is a very healthy employment. One woman who came from a neighbouring parish to work, suffered from fits, and has been very much better since working in the fields, which is very wholesome work for men, women, and children too. Mr. Hancock would not like to see any restriction placed on such labour.

Men's wages 1*s.* 8*d.* a day = 10*s.* a week. Does not give cider as wages, but deducts it from the wages, calculating it as 1*s.* a week, that is 2*d.* for three pints, which is the daily allowance for a man; this makes the wages 9*s.* and cider. Many of his men are teetotallers. Cottage is given to labourers at a low rate, 1*s.* a week. Shepherd and carter have rather more, and have not to find a cottage. The people are well-off, but many able-bodied youths go away to a

Somersetshire.

Mr. Boyle.

k.

blacksmith or carpenter or to the towns, and if it had not been for machinery coming in, the farmers would have been in difficulties from want of sufficient labour. Cider is a wholesome beverage—there is little gravel or stone as in beer counties.

The hours of labour are eight to nine hours daily; from 7.30 a.m. to 6 p.m. in summer, and in winter 8 a.m. to 5 p.m.; the meals generally occupy two hours, but one hour and a half is the time allowed.

96. *Rev. E. Spurway*, rector of Heathfield (population 126; acreage, 692 A. 3 R. 11 P; agriculture mixed, 400 acres arable, the rest pasture, meadow, orchard, cottages, and gardens).—"Boys are employed "at the age of 10 years and upwards all the "year; it is not desirable to limit the age at which "they should commence work; they seldom do any-"thing previous to 10, and then I consider that "unless they become acclimatized and hardened to "cold and wet at that age, they cannot rough it when "older. Girls under 13 are employed only at certain "seasons of the year, viz., bird-keeping (local term), "picking apples (cider district), singling turnips, and "mangolds and stones; girls above this age go out "generally to service. There is only one above "this age who works all the year round in the parish. "A few women are employed all the year round, hav-"ing the option of staying at home to mend clothes, "wash, &c.; they bind and stack corn, pick turnips "for sheep in winter, assist when corn is thrashed, "and other general work. But they are less inclined "to work in the fields now than formerly. I do not "consider it desirable for girls above 13 to work in "the fields; there are times and circumstances when "the wives of labourers can work in the fields with-"out detriment to the well-being of their families, "and when they can add to family weekly earnings "materially. They very often work half-days, being "obliged to stay at home to attend to their own "domestic matters."

"There is a daily school in this parish, to which the parents are only too glad to send their children, as much as a matter of economy to keep them out of the dirt, as for the benefit of education.

"Some of the cottages are bad and in a decayed state, rather too well ventilated; others, again, are good, some are very commodious; most have gardens attached to them, which vary in size; the farmers allow them a piece of potato ground at a moderate rent."

97. *Rev. J. King Eagles*, vicar of Hillfarrance (population 582; acreage 917; cultivation mixed).—Boys begin to work at 8 or 10 years of age; there are scarcely any girls employed in agriculture because of the gloving trade, and such women as are employed are not employed wholly. Their occupations are, in spring, occasionally in weeding wheat; in summer, in weeding wheat and spring roots; in autumn, in harvesting; in winter, in pulling roots.

No boys should be employed under 10 years, nor go to work more than $1\frac{1}{2}$ miles; no restriction necessary on the employment of women in this district (from an experience of 30 years). "The "children at present go to school until they are put out "to work, which is frequently earlier than they ought "to be put to labour; but I do not think either of "the modes above specified (Factory or Printworks "Act) applicable to this district.

"The parish is so peculiarly situate by reason of hamlets in the middle of parishes miles off, that if it were not for schools in other parishes school attendance would be much affected (by distance). It is not at all affected by the money payment, which is only 1*d*. In the parish school there are about 12 boys between the ages of 5 and 13, and about 18 girls from 5 to 15. The circumstances of this parish are also peculiar. There are no land-holders of any extent. The parish is in many hands in small portions, farmed by men living in other parishes to some extent, and burthened with poor. The parish school has been maintained for many years by a lady at her sole expense, and as she has recently died, the school will be closed at Midsummer, and I fear it will be impossible to set one up, as the farmers as a body are not at all favourable to education. There is no night school; there is a Sunday school open every Sunday from 2 to 4, at which some of the labourers' boys attend who do not go to the weekly school.

"The cottages as a general rule are very bad, and in this respect prejudicial alike to morality and health; they generally contain one sitting-room, and two sometimes three bed-rooms. The parish lies low, and the drainage and ventilation is not good. There is no lack of good water, and most of them have small gardens. Many belong to private persons of the labouring class, and those just above them; a few belong to the landowners; the rents are about 4*l*. per annum."

98. *Rev. Eccles J. Carter*, vicar of Kingston (population 892; acreage 3,378; cultivation chiefly pastoral, intermixed with arable).—A large parish, and somewhat peculiar; it supports a large yeoman class, with holdings of 60 to 100 acres, mostly first-rate land. Most of them used to keep race horses and hunters, and drank and mortgaged their property. It is strange they lasted so long. There are two considerable properties. The land is very good, and what is not in pasture and used for grazing, generally yields three crops in two years. If put up to auction it would let very high, but that is not done, and anyone is scouted who gives 50*s*. an acre for it. The land on Quantock slope is also good, but not to be taken liberties with. The labourers employed are too few. "Boys are employed from 10 "years old (at all times of the year); the age seems "governed by a regulation of the Board of Guardians "which only allows a man in sickness for each child "under 10 years at the rate of 1*s*. 3*d*. each." Would not let a boy work under 12 years of age.

Nearly all the women work in the fields, there is nothing else for them to do; and a man's wages are often as low as 8*s*. Many farmers in letting a cottage to a labourer stipulate that his wife is to work too. Mentioned a case of a farmer coming to him, and complaining that a woman was so lazy she would not work; another of a farmer threatening to turn out a family because the wife, who was in the family way, would not work. Had himself read before the agricultural society a paper in which was a paragraph on women working. "The women themselves think it necessary "to work to make up a living. Would like to pro-"hibit it at all seasons except harvest, hay or corn, "and where females are working by themselves, such "as picking apples or potatoes. Dislikes it for two "reasons; it induces a bad tone of morality from the "women working so much with the men; they be-"come loud and use bad language; and also it keeps "the children from school, the elder being left at "home to take care of the younger. There are some "girls work, none under 16, and the number is "diminishing; apple-picking, potato-digging, and "assisting the women on the farms; they go out more "to service. Hardly a boy at school after 10. Wages "8*s*. or 9*s*. from which they have to provide a cot-"tage; rent generally 1*s*. 6*d*. or 2*s*., sometimes as "low as 1*s*., but these are mere two-roomed hovels. "If more than one bed-room, they generally only "use the second as a store-room or let it to a lodger. "Generally a good garden, and also they can hire one-"third of an acre potato-ground, rent about 10*s*. per "annum. Sorry to say will often grow a little "mangold or turnips, which enables them to pilfer "and say it was their own. Farmers know they "pilfer, and wink at it, but better than raising wages. "Used to do so much more when wages 6*s*. and 7*s*. "Once asked a man how he got on without it now. "'Ah sir, there were not the police about then there "'are now.' Cider truck goes on, men five pints "a day, women two pints, even boy on a horse, "ploughing, one pint. Belives it is very bad for "them, and only the very worst cider is given to

"them; 1*s.* a week. Men lose their strength very "early; does not believe six sound elderly men in "the parish; has seen a woman lift a weight a man "could not. Have corn, but very inferior, at 6*s.* a "bushel all the year round; very bad quality, and "often not worth the money; the shepherd had to "pay 7*s.* at one farm because he had higher wages! "Low tone of morality in the place; many drunkards; "not above two or three notorious bad characters in "the village, and they work in the fields. Women "seem to have a strange idea that as soon as they are "engaged to be married they may begin; marriage "only a seal. Many come to be married with "child, but has rather stopped it by refusing to "church such; knows it is illegal, but on one "occasion was threatened: it was a notorious bad "case; child born a few days after marriage, and "girl living in her father's home. Found the senti-"ment of the parish with him. Used to use this "rhyme; Monkton for rich, Cheddon for poor, King-"ston for thieves, Lediard for ———."

"If you ask a farmer, he will always say, 'Labourers "make as much as 12*s.* a week.' This they do by "piecework; but after all, except harvesting, haying, "draining, hedging and ditching, there is little piece-"work to be done. Much of the immoral tone is to "be attributed to overcrowding in the cottages.

"Ample means" of education "are provided, but "not sufficiently taken advantage of; the women work-"ing in the fields is the most fruitful cause of the evil."

99. *Rev. F. C. Kinglake*, curate of Monkton (population just over 1,200; cultivation mixed).—"Boys are employed from the age of 10 years. There are exceptions, but this age may be taken as the rule. They are employed during the whole year; but it is not an unusual thing for a boy of from 10 to 12 or 13 to go to work at a busy time, and to attend school at a slack time of the year. I think it well worthy of consideration whether the maximum age at which boys should work on the land should be fixed. Personally I should regard the age of 11 as a suitable limit.

"In this parish there are usually a few girls engaged in agricultural labour. When so employed they are very seldom under 15 years, and their work would consist of such things as weeding, hoeing turnips, picking up stones, apples, &c., and they would take their share of work at haymaking and harvest. Girls usually go into service; those who work out are generally those who have been in service and are out of employ. As a rule they are the worst characters, but not through going out to work. It is working out that is the resource for those who have nothing else to do. Would not say that above 20 work in this large parish; would be glad to see a restriction placed on girls working in the fields before the age of 15, and would not have any work except those above that age, who have had their chance of going out to service. The wives of agricultural labourers are the principal married women who work.

"We have a national school conducted by a master, mistress, and pupil-teacher; the school is well attended by children up to the age of 13. The parents generally are alive to the advantage of giving their children the opportunity of gaining the rudiments of education. We have also besides Sunday schools two dames' schools; had a night school, but gave it up. Found children did not attend well, and the class of boys wanted did not come, *i.e.* not the elder ones. Schoolmaster keeps it on now.

"Many of the cottages are old, but they are frequently more roomy than the newer ones. Overcrowding does occasionally occur, but cannot be regarded as a habit. Most cottages have gardens, not all. There is no allotment system, but the labourers rent potato ground from their employers."

100. *Rev. R. Watson Moor*, Stoke St. Gregory (population 1,600).—Boys are employed at all times of the year from 8 years upwards. There is a good deal of withy-peeling, at which a child of 5 years can earn 1*s.* a week. All the women and children do this, and it keeps the latter much from school. They should be kept at school till 12 years of age. Girls are employed a good deal in gloving; also in out-door work, but not as much as boys.

Women are "generally employed in out-door labour, "when required." As their labour is optional, no restriction is needed. Those who do not work out are not a better class than those who do.

Wages about 9*s.*, and cider.

There are national and Sunday schools under Government; there are 130 children in the day school, but attendance is irregular. The people will not take advantage of them as they ought to do, partly on account of poverty, and the apathy of parents; also distance from schools, and bad roads (which are under water part of the year). Farmers have a good deal to do with children not going to school, they complain of their being better educated than their own, they will not subscribe at all, and there is no squire. There is a night school.

Most of the property belongs to the Dean and Chapter of Wells, whose cottages are very bad. Ventilation is good, because the wind blows through the chinks in the walls of many of them. State of morality low; formerly a great part of the children were illegitimate, it is a little better now. A good deal of overcrowding. They have not gardens, as a general rule; no allotments; the farmers and proprietors will not give land for the purpose.

II.—*The Blackdown Hills.*

101. *Hon. and Rev. Fitzhardinge B. Portman*, rector of Staple Fitzpaine cum Bickenhall (population 491; acreage about 3,000).—Has five parishes, Staple Fitzpaine, Bickenhall, Thurlbeer, Orchard Portman, Stoke St. Mary; but all together have not a population of 1,000, or a revenue of 1,000*l.* a year to the rector. All belong to Lord Portman, and are close parishes. Cultivation mixed; a good deal of wild common. Most of the boys leave school at about 10 to guide the plough; some few stay till 13 or 14. Girls stay longer than boys, but are generally taken away at 12 to sew gloves; they go out about 15 or 16 to domestic service, after a few years sewing gloves. The boys' employments, before they go to regular work, are mazing, *i.e.* keeping pigs, in the autumn, and keeping birds for two or three weeks in the spring (a few, perhaps one on each farm). They are often kept longer at work than women or men. Women begin at 8 a.m., and finish with the men, who work from 6 a.m. to 6 p.m. They are never ill-treated; if a farmer thrashes a boy, the parents have him up before a magistrate directly, or take the boy out of his employment. No out-door labour affects the health of the young; gloving does, if it goes on long; it is not a healthy employment, owing to the stooping posture they are obliged to assume.

Would think it a great advantage if boys could be kept at school till 12, but thinks it is impossible. Would certainly not interfere with women's work; they are employed with advantage to the farmers and themselves. In Bickenhall are one or two widows, who would starve if they had no field-work.

It is impossible to apply the Factory Acts to agricultural labour; the Printworks Act would do no good; six months' schooling is not long enough. Practically the boys of 12 and under come most of the winter, Michaelmas to Christmas or Lady-day, and work the rest of the year. Distance and expense do not affect the school attendance. A mile and a half is the greatest distance the children have to come. 1*d.* the weekly payment. There is a great and increasing desire to send the children on the part of the parents; nine out of 10 of whom fully appreciate it. There are scarcely any children neither at school nor work.

Somersetshire.

Mr. Boyle.

k.

APPROXIMATE NUMBER of children of the labouring class at school in the parish of Staple Fitzpaine near Bickenhall.

	Boys.			Girls.			Total Boys and Girls.
	Under 10.	10 to 13.	Total.	Under 10.	10 to 13.	Total.	
Summer -	19	7	26	12	8	20	46
Winter -	16	11	27	11	8	19	46

"The average attendance we have no means of giving in detail, but it is generally good."

Mr. Portman is perplexed at wages not rising with the disappearance of the labourers, but thinks they must soon, the introduction of machinery having prevented a rise so far. The departure of labourers exercises a bad effect on the schools; the bigger boys do work that used to be done by men, and small boys do the old work of big boys. There is a great migration going on; the people go like a flock of sheep; one member of a family finds himself thriving elsewhere and writes home to say so, and the rest follow. There are two vacant cottages in the village now, and in Bickenhall six. Lord Portman lets his cottages cheaper to a labourer than to any outsider. The cottages are good, there is no crowding. But the people do not appreciate the value of much room. If you give three rooms, they will live in one or two, and let the rest to lodgers. There is always an odd lodger to be found.

102. *Rev. R. A. St. Leger*, incumbent of Otterford (population 476; acreage 2,343).—Boys go to work as soon as they can go with the plough, about 10 years of age; no girls work; women only plant potatoes and make hay, seldom any other work. There are Church day and Sunday schools, also dissenting ditto, "both are taken advantage of; if any "neglect to take advantage of them, the fault lies "with the parents."

Cottages sufficient, but in a very bad state, dirty, and dilapidated, several are a long distance from water, and that not over pure, many without any at all. Not overcrowded, "but the moral condition of "the inhabitants of these cottages might be improved. "Most have gardens, and there are allotments, but "not convenient in situation."

103. *Rev. A. C. Ainslie*, vicar of Corfe.—The people are very badly off in the Blackdown hills, where there are many squatters settled on a piece of ground, which they till with the help of their wives and families. A good many too are employed in burning lime, which only affords a very precarious support. One man has built five or six cottages, entirely by collecting the stones, which he has collected in ploughing, and putting them aside till enough are accumulated. The chief enemies to schools are the potato setting, hay and corn harvest, and potato picking; but below Taunton, at the parish of Stoke St. Gregory (*see* above, No. 100), which is the most distant parish he inspects as diocesan school inspector, there is another enemy in the spring, the withy-peeling, when the people of the neighbouring village, men, women, and children, all turn out and make a sort of junket of it, taking their dinners with them. Does not lead to immorality, as they go in families.

104. Walk over the Blackdown Hills with Rev. A. C. Ainslie.—Extract from diary, Feb. 1, 1869.

Drove over to Corfe, and spent the afternoon with Rev. Mr. Anislie, vicar of Corfe, walking over Pickeridge and Stapely hills. Corfe a small parish, 300 people, lying under the hill; there is little working of women in fields, the cottages are of a rather superior description; he showed me two very bad, one room above and another below, let for 3*l.* In the one we went into only two women lived, but it was very close, ill-ventilated, and the roof looked falling in. In this cottage had been the only cases of small-pox and diphtheria he recollected in the village. House rent in Corfe, generally rather high; wages 9*s.*

Walked up on to the hills, the sides of which are much covered with lime-kilns, and the lime-burners are a very poor class. The people were formerly squatters, but most of the hill is enclosed now. We visited *John Venn*, a hawker, with a wife and large family, and a fair cottage, two rooms above and two below, cob and slate, built right into the road, inside the hedge. Two of his children were gloving; the Yeovil people bring the gloves round, and this is the furthest parish where it is done, they were quite young, the youngest about 10. Mr. Ainslie approves of it, but is sorry it takes them from school. *Venn* told us that "when the com "missioners came to inclose the Black Down, bits "were allotted first to the lords of the manor, thus all "Pickeridge Hill, which he remembers common, is now "inclosed by a lawyer, Mr. Beadon; distant people, "even as far as Taunton Deane, who had rights, were "allowed a bit of land, but the rights of the squatters "were not respected, and they had to buy the land "on which they had been settled for years, at about "10*l.* an acre, mere uninclosed common. It was "advertised that in Taunton sessions would be held "and claims admitted, but either the poor people never "saw the announcement, or did not understand the "importance of it; further up on the hills, where there "were no manorial rights, bits were allotted to the "squatters." The squatters, who seem a different race from the people about, dark hair and eyes, probably the old Damnonians, and might be considered as a fit study for ethnographers, inclosed generally a small piece of garden from the moor, and hired the neighbouring woods, where they cut down the underwood as soon as it was 14 years' growth. Their cottages were generally miserable like the Irish, but most of those are gone with the appropriation of the land, it being a duty of the landlord to keep them in repair. Mr. Ainslie explained to me that the landlords had always asserted their claims, so that when the common was inclosed, these squatters had really no rights. They are careless generally about religion and morality. Mr. Ainslie has an idea, which he hopes soon to carry out, of getting a small room on the hill and having service there once on a Sunday, and so getting on gradually with the people. There is a Baptist chapel on the hill, and if he complains about their not coming down to Corfe on Sunday, they say they go to service at this chapel, and of course he can say no more, but he fears many go nowhere. There is an outlying hamlet of Pitminster parish called Feltham, outlying far in the hills, which he fears sets a bad example. Pitminster is a long and straggling parish. There is one of the squatters, who married a woman within the degrees of consanguinity, he could only do so by swearing to a lot of statements of doubtful truth. She bore him a lot of children before marriage, and came to church the first Sunday after he had married her in white ribbons, like an ordinary village bride. A labourer in a cottage belonging to this same man lives with another woman, having a wife in Taunton all the time. We visited the cottage of Mrs. Broad, two rooms above and two below, comfortable enough. Most of these cottages belong to Wm. Hake, who has built six altogether, and lets them at 4*l.* a year, most of them to lime-burners. We saw one house of his just finished, much superior to the rest, and built of stone and slate, with a window on each side of the door, and three above; it was built on to the end of a row of much inferior cottages.

105. *Mrs. Broad.*—Husband is a lime-burner, generally two lime-burners become partners and take a quarry, and have a horse between them, obliged to have a horse to carry the lime. They are paid by

the quantity of lime delivered in the sack, a certain amount for the master they work for, and some left for the workmen. The work is very irregular, sometimes there is a great call, and sometimes it is not wanted at all. Sometimes four weeks without getting any money at all, and consequently get in debt to shop-keepers, and pay when the money comes in. The busiest time is just after harvest, when a quantity of lime is wanted for the fields. You may put the profit at 8*s.* or 9*s.* a week on an average, and no cider; out of this have to pay 4*l.* for a cottage, and have to join someone else in keeping a horse. Would far rather her husband had farmer's work; better wages and more regular. They suffer much from the heat of the kilns in the summer.

106. *James Hoare*, Staple Fitzpaine, aged 13.—Began to work at 7, driving plough for father; father is a farmer, farming 20 acres. Found could not manage the horses well, sometimes knock me down, never hurt me, ran over me sometimes. Has other brothers, and all work out. I went to school before I worked out, and after began working out took five months school, and the rest of the year work, after which left school at 11 years of age. Like school better.

107. *George Wembrige*, Staple Fitzpaine, aged 10.—Began work at 9, driving plough; can manage horses and keep pigs; father is a labourer. Horses never knocked me down. Was taken way from school to mind birds; the farmer wanted a boy, he gave me 2*s.*

108. *Afred James Dinham*, aged 13.—Began to work at 8, driving plough. Horses knocked me down once, but found I could manage them. Pays 3*d.* a day. Came to school again the year after, and was only employed after Lady-day. Up till 11 years of age came to school a few months, and worked a few. Liked coming to school best. Made a boy terrible tired walking about with the horses. Had supper when I came in, taties sometimes, sometimes bread and cheese, no meat except sometimes on Sunday. Had 3*d.* a day, and a pint of cider; have 1½ pints cider now, and 6*d.* a day. Still drive plough.

109. *Rachel Dinham.*—Began gloving at 11, now aged 14; don't much like it; too much sitting over the machine; have had a pain in the back, but never very serious. Would rather go to service. Work from 8.30 to 6.30; never get a holiday; can do a dozen pairs in a week, get 2½*d.* a dozen for them. Sisters gone to service. "Mother do glovey." Mother taught me. Some do it in Bickenhall. The work is sent from Mrs. Stevens at Ilminster, she always pays in money. I walk into Ilminster to her once a week, start at 8, get there at 10; do not stop more than an hour generally. Sometimes wait two or three hours in a room. Mother goes sometimes; the gloves are kid.

110. *Jane Wembridge*, aged 12.—Began gloving at 10, would rather go to service; too much sitting down; felt a pain in the back sometimes, but never very bad. Can do 1½ dozen pairs in a week; mother taught me. Get gloves from Mr. Yarde at Broadway, six miles, walk there to him; sometimes wait two hours. Walk tires me sometimes; always go myself. Me and mother work together. First began at 10 years of age, and did it in the evenings after school, going to bed sometimes at 11 or 12 p.m. Usual hours of work now 9 a.m. to 6 p.m. Sometimes in busy times work much longer, have worked from 6 a.m. to 12 at night with only an interval for meals. Never get up and run about, and never have a holiday. Got 11 brothers and sisters, seven brothers at home. Dinner generally bread and butter, sometimes potatoes, sometimes tea-kettle broth. Mother and I drink tea, and father tea too; he cannot drink cider. He is a thatcher by trade. Breakfast, bread and butter and tea, supper, bread and butter, or sometimes cheese, and tea. Don't very often get cider, don't like it much.

111. Cottages at Staple Fitzpaine.

Extract from diary, February 2, 1869.—Mr. Portman took me to see one of Lord Portman's model cottages; very neat, built of stone and slate, two rooms below with a vestibule and three bed-rooms above. It was inhabited by the policeman, who pays for it 4*l.* 16*s.*, which even is rather under its value; a labourer only pays 3*l.* for one as good. Saw also one of the old cottages, cob and thatch, neat and warm, with a large room below, and two above; the kitchen had one of the old high chimney-corner fireplaces, which the people in this country are so fond of. Is half of an old farm-house divided into two. It is let with the farm, and the tenant holds of the farmer; he is by trade a carter, with wages 11*s.* a week and a cottage. The usual wages about here are 9*s.* and a cottage, some old people get 8*s.*

Chard Union.

112. Meeting of the Board of Guardians at Chard, March 29, 1869. W. F. Cuff, Esq., Merriott, Chairman of the Board of Guardians, in the chair.

Minutes of the Meeting.

(1.) In this union boys generally begin to work at bird-keeping at 10 years of age; they are little used for plough, except when three horses are driven; about Chard itself they are used for the purpose; but reins are becoming very general now. Some boys go to work as early as 8.

(2.) No girls are employed in field work as a rule, with the exception of a very few bird-keeping; there is a great deal of other employment for them; besides gloving, which is pretty general throughout the union, there is lace made in Chard, and a good deal of mending done in the neighbourhood, which is all done by hand. It is something independent, and they like that better.

(3.) The women who are employed are chiefly labourers' wives; some few of their daughters too, but such employment is almost confined to married women. Merriott, which is a peculiar parish, being chiefly market gardens, is the place where they are most employed; there they go out with their husbands and children to work. They are not so much employed anywhere else; their usual work is in hay and corn harvest, and weeding, spring and summer work. There is little winter work. Singling turnips is mostly done by men.

(4.) The cottages are conveniently placed, so that few labourers have to go a mile; put the average at half a mile. A good many labourers live in the villages, and go out to the farms to work.

(5.) Women work, 8 a.m. to 6 p.m.; boys, 6 a.m. to 6 p.m., the same hours as the men.

(6.) Mr. Bond of Ilminster thought that no boy ought to go to work under 10 years of age; one or two gentlemen present thought that it was desirable to place a limit, but were in a great minority; one said that as a matter of fact, 10 was the practical limit. Mr. Paull thinks that it would not do any harm to any one, if such a limit was fixed; if children go to work early, they are liable to to get ill, and so thrown on the parish; besides which they ought to go to school.

(7.) No necessity to restrict women's labour; at Merriott it is only gardening, and elsewhere all over the union they are engaged in gloving, collar-making, &c.

(8.) There is no parish without a school. Mr. Cuff says many parents complain of poverty, and inability to pay the pence, and so do not send their children. Mr. Paull thinks there is a want of inclination among the parents.

(9.) There was a very general complaint of the badness of the cottages in the district; overcrowding is unfortunately very general; a great wish expressed that Government would do something for them, but no one knew how it could be done. One gentleman who takes his cottages with his farm, says that he pays

Somersetshire.
Mr. Boyle.
k.

6 per cent. for them to the landlord, which quite pays the landlord, and he is very glad to do so, as though he has to let them at a cheaper rate to the labourer it is quite worth his while. Chillington was singled out as being a very bad parish in this respect, but they are being improved there now; many of the cottages were out on lives, but they are now falling in to the squire. Cottages mostly well enough ventilated from want of repairs. At Ilminster there is a great deal of overcrowding. Mr. Paull stated that the relieving officer had made a careful inspection of the town, and came to the conclusion that 50 new cottages were wanted. Fortunately there is an increasing sense generally of the want of more and better cottages. Lord Bridport is doing wonders in this way at Cricket and Winsham; formerly cottages used to be pulled down, but there have been some new built lately; some people who work in Cricket, come from Winsham, but that is no great distance. The general rule in the district is only one or two bed-rooms to each cottage; those who have three bed-rooms very often abuse their advantage by taking in lodgers, or making the third into a store-room Mr. Paull mentioned that he has some two-roomed cottages at Ilminster, but puts into them a couple or single person; he has one of two bed-rooms, in which live a father, mother, and nine children, of whom the eldest are two boys of 18 and 19. Young men do not go away much from the district, but the population is not increasing.

(10.) With respect to gardens, the general rule seems to be bad cottages and good gardens. A cottage without a garden is an exception, and there is always potato ground to be hired.

General wages seem to be 9*s.* and cider. Mr. Paull gives 10*s.* a week and no cider. He calculates cider at 1*s.* and his men accepted the extra 1*s.* in lieu of cider. He sells cider to them himself, at the rate of nine gallons for 4*s.*=72 pints for a month=18 pints a week=3 pints a day, which is quite enough. But opinion seemed to be divided as to whether the cider consumed weekly by a labourer should be valued at 1*s.* or 1*s.* 6*d.* Mr. Bond of Ilminster, said that if you offer 1*s.* 6*d.* a week instead of cider, a labourer will always take it. Mr. Fowler of Lopen parish gives his best men 9*s.* a week and cider, the others 8*s.* and cider.

113. *Mr. Bond*, Ilminster, occupier.—Holds land under Mr. Lee Lee. He hardly employs women at all, the fact being they are not to be got, as they are principally busy, button-holing, &c. He takes cottages with his farm; the fact is the labourers prefer holding of farmers, as they get cottages cheaper, in such cases 1*s.* being the usual charge. If they have to live in the village they probably have to pay something more. A farmer, of course, likes having cottages on his farm, and will generally make inquiries when taking it, considering that it adds very materially to the value. Feels very strongly about cottages, and thinks that Government ought to do something to better them.

114. *Mr. Hull*, occupier, Chillington.—The women in the village mostly glove; has one or two who come out to work on his farm, but they come irregularly, and not in cold or wet weather; they come out in the haymaking and harvest, also to weed corn, and to do jobs about the farm. His farm is principally pasture, and he lets his dairy to a dairyman, a very common custom in this district, he providing and feeding the cows, the dairyman milking and making cheese. His wages are 9*s.* a week and cider; he has two cottages on his farm, which he lets at 1*s.* a week. The rest of his labourers have to hire cottages in the village, and generally pay for them 1*s.* 3*d.* a week; cottages are very bad, but improving.

115. Cottages at Chillington.

Mr. Hull kindly accompanied me to some of the cottages in this village. They mostly belong to Squire Notley, and have been out on lives, but are falling in now. Many of them are in very bad repair, but such as the lease of falls in are being put in order. The first we went to belonged to a cobbler, who had brought up in it a family of 13 children. There was only one room above and one below; the cottage was built of cob and thatch, a high chimney-corner, the window very small, and the house consequently stuffy, and ill-ventilated; the floor was rough stone, and the staircase went up in one corner of the room. Hard by was a cottage of a similar description, which had lately tumbled down from want of repair. Further on was a cottage that had been lately repaired; the cob walls had been raised with stone, and roofed with slate instead of thatch, and the upstair rooms, which must have been very low, raised to a moderate height. One of the worst cottages was one placed on the slope of the hill, a little off the road. It is held of Mrs. Wetherall, of Chard, at 1*s.* 6*d.* a week. The downstair room is sufficiently large, but the flooring is very bad, all the windows broken, and stuffed up with paper. A husband, wife, and four children live there. There are two rooms above. The woman complained it was no use to get the windows mended, the boys break them again. Mr. Hull thought her own boys had as much to do with it as any one else. On the top of the hill was a pair of cottages, held under Mr. Notley, and lately put in repair; the old people, who inhabited the one we went into, had held it till lately under an acknowledgment of 1*s.* a year, and the Squire had put it in repair for them on condition of their paying a rent of 2*l.* a year, and it falling in to him at their demise.

116. *George Newis*, Shepton Beauchamp, aged 19.—First went to keep sheep at 6 years of age, bird-keeping soon after; hours 7 a.m. to 5 p.m. Drove plough at 8 years. Began at 1*s.* a week; the horse trod on my foot once, once he knocked me down and the wheel went over me, but it did not break my leg. In bird-keeping used to halloo at the rooks; got under the hedge when it rained; master did not look very sharp after me. Never went to school, except on Sunday. Come to night-school pretty regular.

117. *Thomas Best*, age 15, Shepton Beauchamp.—First began at 7 driving plough; had regular work all the year; kept sheep and birds, like keeping sheep best, not so much trouble. First went to school at 4, when left could read to a certain exrent, and do a little writing, had not begun arithmetic. Kept birds on Sunday as well as week-days. After left school to drive plough never came back, but come to Sunday and night school.

---

118. *Rev. J. Higgin Evans*, vicar of Merriott (population 1,412; acreage 1,694; cultivation chiefly arable, but mixed, much of the ground being cultivated as market gardens).—Merriott is a very peculiar parish; there are three employments in it, factory, gloving, and farm-work; there are only two large farms in place. Mr. Cuff's one, he employs a good many women and girls on his farm. As a rule would say that these women bear a higher character than glovers or factory hands. Factory hands worst. Get together in the dark, coming and going to and fro to work. Would like to see girls not allowed to work out till 11 or 12 years of age; no necessity for restrictions on women. The great feature is the market gardens, all small holdings; many people borrow money to buy an acre or two of this very rich land, and pay it off gradually. At a certain time of the year women and children give up other employments and come pea-picking. Husbands go hawking the vegetables about the country, and the women and children work in the gardens nine days to the week, the whole of the long summer day from morn till eve. The cottages are very bad; hardly sufficient for the population considering that beside the above employment many hands live here who are employed in sail-cloth factories. A great deal of crowding; can mention families of seven or eight living in one bed-room. Morals very bad; generally they go on till the child is coming, and then

the man will generally marry the woman. Much of this arises from the gloving girls leaving their homes at 16 or 17, when able to support themselves, and setting up for themselves. They marry very early, because it becomes necessary. Still there are a great many illegitimates, and three-fourths of the women marry with child. Has suspicions of bastards being at least not taken such good care of as other children. Certainly there are more bastards die than other children. Considers gloving a great evil. But as a rule the girls prefer gloving to going to service on account of the independence. They pay their parents 2*s.* 6*d.* a week as long as they stay at home, and what is over generally goes in finery. Some of them can make more than 6*s.* a week.

A good many boys work in the gardens from 7 years old all the year round. Would like them not to work under 10. Many children are kept from school through the ignorance and poverty of their parents. There are Sunday and week-day schools under Government teachers.

119. *Rev. J. E. Lance*, Buckland St. Mary (pop. 715).—Rather a peculiar parish, consisting chiefly of small freeholds. As many as 50 votes in a population of 700, scattered over a large hilly parish. Many of the holdings so small that the proprietor and his wife and family are sufficient to work it without any labourers. The boys and girls are both taken from school early, the girls for gloving, for which they get 2*s.* 2*d.* a dozen pairs sewn. At first it is good work to do a dozen pair in a week, but a practised hand can make two dozen. It makes them bad wives, for it is a kind of sewing useless for needle-work or repairing clothes. Few women work, and those not continuously, principally hoeing corn in the spring. The state of morals pretty good and improving. Formerly many women used to come to be married in the family-way, but some 12 years ago he wrote a pastoral letter and sent it round everywhere, and had only had a few cases since. As a rule, returns the marriage fee if no child is born within the year. There is little drunkenness. There were a good many squatters, but all have been got rid of by the Inclosure Commissioners, which is a very good thing. They had no right on the moor, which belonged to the manor, and when the manor was inclosed it was divided among the three proprietors. The squatters had acquired no rights, because the lords of the manor had always claimed the land annually. It is a wide parish with many outlying cottages, and the distant people seldom come to church, generally saying they go to some other church which is nearer; but this Mr. Lance doubts. Most cottages fair and improving, few with less than two bed-rooms. Some, however, are wretched hovels, at least two consisting of only one room. These bad ones are freeholds of small size. The gardens are very good. There is a labourers' friendly society, and each cottage has at least a quarter of an acre garden. Rent too is low, generally 50*s.* to 3*l.* per annum. Before the Union Chargeability Act the parish was under a great disadvantage, for it lay between Lord Portman and Major Elton, both proprietors who reduced their cottages to the number positively necessary for the labourers. The wages are generally 9*s.*, but some farmers only give 8*s.* House rent is low. Mr. Lance remembers perfectly well when wages were only 7*s.* Could never make out how people got on. The fact was they could not live on it, they were always in debt. It is a parish from which there is a good deal of emigration; can recollect 200 people going to the American States.

120. *Rev. George Phillipps*, incumbent of Chillington (pop. 313; acreage 881; cultivation mixed).—Boys begin to work at 9 years; do not think they ought to work younger, and very few do so. They work all through the year. "Girls are not generally "employed, nor women, except in the haymaking "seasons." "The young women with us go out to "service, or get employment in glove making. I do "not know that it is desirable to have any restriction "on their employment."

They go out to work "about a mile; occasionally "they have further to go, two of the farmers having "land in adjoining parishes." We nave more cottages than are sufficient for the supply of the labour required, consequently many come to reside in the parish who do not work in the parish. Some of our cottages are very indifferent indeed; two or three of them I consider scarcely fit for people to live in. Some have only one bed-room, in which too many sleep to render the room wholesome. Several of the cottages have gardens, but very small. Many cottages have allotments.

"We have a mixed school kept by a woman, in fact a dame's school. Many of the parents send their children, but they are obliged to take them away as soon as they are able to earn anything."

121. *Rev. J. S. Coles*, Shepton Beauchamp (pop. 658).—Women and children are not much employed in agriculture in this parish. A good deal of gloving done, at which some girls are employed 12 to 14 hours a day. "I think sitting at the gloving for so "long a time is injurious to health." Is in favour of an alternate whole day system.

On the register of the school at Shepton Beauchamp.

—	Under 10.	From 10 to 13.	Total.
Boys - -	50	6	56
Girls - -	40	4	44
Total -	90	10	100

Average attendance about 90, none of whom over 10. There are about 50 males and same number of females growing up with insufficient education. There is an evening school for females kept by Miss Coles, open from Michaelmas to Lady-day for two hours two nights a week. All are above 12 years of age. On the register 40, 26 average attendance. The course includes reading, writing, the Bible, and Catechism, but it is inadequate to supply the deficiencies of the day school, owing (1) to the young people being tired with a long day's work, (2) the difficulty of obtaining teachers.

"I have no doubt that want of proper chamber accommodation in cottages is a fruitful source of immorality, by destroying, or at least lessening, a right sense of decency. Very few cottages in this parish have three bed-rooms, and many only one. Any means which would improve chamber accommodation would be a great blessing. They are as a rule deficient in size. Some gardens, but most of the families have allotment grounds. Very many are owned by labourers, and very many are mortgaged, or in the hands of persons only a little raised above the labourers, and therefore are not kept in repair. A few new cottages are being built. Rent varies from 2*l.* 10*s.* to 4*l.* 10*s.*"

122. Extract from Diary, March 4, 1869:—

"Drove to Shepton Beauchamp, and saw Rev. Mr. Coles. Curious place, much over-populated, nearly a person to every acre, yet cannot induce them to go even a few miles to work; would rather starve at home. Those who go away have the reputation of being rather stupid, but it is hardly fair on them, for of course it is the worst men who are out of work, who go away to try elsewhere. The others have lots of work and are willing to stay. Sent two boys to Yorkshire, but one could not manage the horses, *i.e.*, the horses did not understand his language, and so both came back. A very good school under a mistress. At Barrington, which is also Mr. Coles' parish, an endowment of 40*l.* and a master. I went to the school at Shepton, and examined Miss Hearne, the mistress, and two farm boys brought up to me. There are two night schools, one for boys, the other

Somersetshire. Mr. Boyle. k.

for girls, which Miss Coles manages, and it is a very good one; also a Sunday school. 130 children, and population not much over 600.

123. Extract from letter from V. S. Coles, Esq., Shepton Beauchamp, and Cuddesdon College, Oxford.

"Our parish affords a striking example of the evils of early work, as you will find a good school receiving government aid, and doing much for the children of the small farmers and shopkeepers, who can afford to keep them longer at it, but not helping the labourers much more than a school of a far lower type might very well do. The wages are low, and the parish very greatly over-populated, but it is hard to see what remedy can be at present applied. Through Canon Girdlestone's kindness I heard last autumn of several excellent places for farm labourers in the North of England, which the better class of men would have been suited to, but of course they are just the few who are in constant employment at home, and therefore not inclined to move; the only men who are ready to go are poor fellows, who from want of regular employment have never had fair chances, either as regards food or opportunities for learning their work. They are taken on by the farmers at odd times or in harvest, but they cannot plough, and are in no way "skilled." They would soon improve under better circumstances, as one sees from the difference in the strength and even intelligence of one of them after he has had a few months of good food, when employed in a gentleman's garden or stable."

124. *Miss Hearne*, schoolmistress, Shepton Beauchamp.—Has not a child in the school now over 10 years of age. Till last Christmas had one of 17, and another of 14, and a few others a little younger; some parents having been induced to keep children on, as there is a charity for the benefit of boys who stay on to apprentice them to some trade. Most boys go away at 10 to work in fields; the girls at pretty much the same age to glove, but some go earlier, and many of those who are in school glove in the evening from 5 till 9. (She asked the first class to hold up their hands, whoever did it, and every one, even a little thing of 8, held up her hand.) A boy at 10 can read tolerably, and write a fair hand (she showed me one or two very good specimens); he can listen to a Bible story, and write it down afterwards, do the first four rules compound, and go up sometimes to fractions. He can write from dictation. The spelling used to be very bad, but she has improved it by taking up a class, and making them shut their books after reading, and spell the words, going up or down when a mistake is made.

It is provoking to have all little ones again after having had a class of big boys. At this time there happen in the village to be a great many boys of 9 or 10.

125. *Annie Garrett*, pupil teacher, Shepton Beauchamp.—At 7, a boy can read words of one syllable, and a few of two syllables; can write capital and small letters, and add and subtract up to 10. They go away at 9 or 10 mostly; can read tolerably perfectly then and write.

Yeovil Union.

126. Meeting of the Board of Guardians at Yeovil, March 3, 1869. From the Yeovil paper.

The weekly meeting held on Wednesday was attended by Mr. John Trask (chairman), Messrs. Wm. Pool (vice-chairman), H. Parsons, W. Woolcott, J. Wills, Brown, G. D. Templeman, W. Hawkins, C. Raymond, Wake, Ewins, A. Hodges, Simeon Hebditch, Wm. Raymond, Darby, J. Hodder, and J. R. Pearse.

Mr. Boyle, one of the commissioners appointed by the Government "to inquire into and report upon "the employment of children, young persons, and "women in agriculture, for the purpose of ascertaining to what extent and with what modifications "the principles of the Factory Acts can be adopted "for the regulation of such employment, and especially "with a view to the better education of such "children," waited upon the board for the purpose of obtaining answers to the following questions, which were handed to the guardians in a printed form:—

"1. At what ages, and at what times of the year, are boys employed on your property or farm, and in your parish generally?

2. Are girls so employed? and if so, how many, at what ages, and in what occupation?

3. To what extent are women so employed?

4. To what distances do the children, young persons, and women employed on your farm and in your parish generally go to work?

5. What are their hours of work?

6. Is it desirable to place any restrictions on the age at which boys should be permitted to work on the land, and if so, at what age would you place the limit?

7. Is it desirable to place any restriction on the employment of females, and especially of the young, in agriculture?

8. What means of education are provided in your parish for the children of the agricultural labouring class? Do they take advantage of them? If not, are there any other causes besides early labour to which you attribute their non-attendance?

9. What is the condition of the cottages in your parish and neighbourhood? Are they sufficient for the supply of the labour required? Are they conveniently situated with respect to the farms? Are they overcrowded, and have any evil results to morality come under your notice in consequence? Are they well supplied with water and well ventilated?

10. Have all the cottages in your parish and neighbourhood good gardens, or, in default of gardens, have all the cottages allotments of land conveniently situated for the use of the labourers and their families?"

The questions were answered by the guardians to the effect that very few women are employed in agriculture, and that the ages at which boys are engaged ranged from 9 to 11. Mr. H. Parsons stated that no boys were employed in the union under the age of 9. Boys of that age usually accompanied the carters or were employed in scaring rooks. The chairman informed the Commissioner that great difficulty had been experienced during the past five or six years in obtaining boys. They were obliged to employ men to drive the plough. Mr. C. Raymond explained to the Commissioner that the majority of the girls and women in the union were employed in glove making. Their earnings averaged 4*s.* per week, although one family, in which there were four daughters, regularly received 26*s.* per week. If women were employed in agriculture they worked from 8 in the morning until 6 in the evening. Boys were expected in the stable by 6 o'clock. They did not work on Sundays in frightening the rooks, which were considered by the guardians generally to be "pests" to the farmer. Mr. Brown, Mr. Pool, and the chairman expressed themselves as opposed to any legislation in the matter, and any restriction of the age at which boys should be employed. Upon the subject of education the guardians stated that almost every parish was provided with night and Sunday schools. Montacute, South Petherton, and Martock national schools were highly spoken of, and a great many children were said to be taught therein. Mr. H. Parsons spoke of the night school at Merriott under the personal supervision of Mr. Cuff. The boys paid 2*d.* per week. He (Mr. Parsons) had examined the writing and was astonished at the progress made. The boys had, in many instances, never previously had the advantage of education. In reply to the Commissioner, Mr. Woolcott said that there were some children in Montacute who did not attend school. This neglect he attributed to the parents. Mr. S. Hebditch confirmed the opinion expressed by Mr. Woolcott, and added

that poverty had a great deal to do with the parents' neglect. Some of the people in this parish were particularly poor, and could not afford even the 2*d.* a week for education. The Commissioner inquired if South Petherton was a poor parish. Mr. Pool replied that South Petherton was supposed to be the most fertile parish in the county of Somerset, which was considered to be the most fertile in England. Mr. C. Raymond asked if such were the case how was it that there were such a number of paupers in the parish. The chairman said that many years ago a good trade was carried on in South Petherton. That had been discontinued, and consequently there was a scarcity of work. It would take some years for the parish to work down to its proper level. The cottages in South Petherton as a rule were said to be very bad, some having only one bed-room. Mr. H. Parsons said that the cottages in every parish in the union had been greatly improved during the last seven or eight years. Mr. S. Hebditch referred to the cottages erected by Mr. Blake at South Petherton. Those held by small freeholders were in a disgraceful condition. The average rate of wages was said to be 9*s.* per week, in addition to cider. Men on piece-work earned from 12*s.* to 15*s.* per week, with cider. Mr. H. Parsons said that 7*s.* was the average in West Somerset 20 years ago, but wages had increased since then. The guardians concurred in the opinion that no legislation was necessary in this district, and the Commissioner, having thanked the guardians for their courtesy, withdrew.

127. Additional notes of the above meeting, March 3, 1869.

(1.) Boys are not trusted alone with horses, they always go with the carter; it is the improvement in trade that finds other occupations for them; they are employed in factories, not in sewing, but work is found for boys. Difficult to get them as young as 9 now; only two or three in a parish employed at that age. Mr. Pool of Martock employs an old man with a gun; cannot depend upon boys, they get away to play together.

(2, 3.) All the girls are employed in weaving, collar-making, and glove-making. All work at home, and do not begin much before 9. They begin being initiated when very young, perhaps to make a pair or two now and then, and begin regularly at 12 or 13; it is said that the earlier they begin the better. Gloving covers a very large range; some are found as far as Exeter in one direction and Shaftesbury in the other; the centres are Yeovil, Stoke, and Milborne Port. The old system of making them come to Yeovil with their work has gone out; it used to be a great hardship. Mr. Cuthbert Raymond, the owner of a large factory at Yeovil, says that he goes to Langport, and takes a room in the hotel himself, where he receives and pays the glovers, and gives out fresh gloves every Monday himself; linendrapers drive a brisk trade among the glovers, and it is a very bad system; but it has nothing to do with the gloving; they sell their wares to girls, who get in debt to them, and once in debt are always kept so. Mr. Raymond knows a case of four gloving girls taking 26*s.* home to their parents in one week to add to the family wages; of course an exceptional case in a family where there happened to be four grown-up girls. A woman doing nothing but gloving would make 6*s.* a week, but of course much of their time is taken up in domestic duties. This led to a discussion, the farmers maintaining that it is a most unusual thing for a woman to make as much, and at last an average was struck, saying that the average earnings might be 4*s.* a week, but several of the farmers said that to earn even that was very unusual. All women who can do it, are employed in the gloving; it has taken them away from the bean-planting, which used to be a great employment for them, as many as 10 having been at work at a time for one farmer. It is done by the drill now; dibbling is done sometimes by children; in Martock old men are employed to plant beans with a stick. Almost the only work done by women now is in the allotments and potato ground.

(4.) There is a growing disposition to make it more convenient for labourers as to their dwellings. Most live in the parish they work in; this is an improvement, as in close parishes formerly cottages were much pulled down, to send the people to live in the towns.

(5.) Such women as work, work from 8 a.m. to 5 p.m. The boy who drives plough comes at 6. The boy who keeps birds in summer ought to come earlier, but does not.

(6.) No restriction need be placed on boys' labour. Some are better at 9 than others at 11; some parents will come and ask a farmer to take one of their boys on a job. In the union generally all boys go to school, to Sunday or evening school, if at work during the day; in some parishes, however, there are a lot of boys who do not come to school or work either; but get loitering about and into mischief. In many cases it is the parents' fault.

(9.) Many bad cottages in nearly every parish, but they are improving as a rule. Mr. Digby has done a good deal lately towards improving cottages. Landowners must make up their minds to a pretty considerable sacrifice in building cottages. In Hardington some cottages are very bad, and crowded with large families. South Petherton, East Coker, and Hardington seemed reckoned the poorest parishes.

(10.) The allotment system is pretty general, if a man has not a garden he can always have a bit of potato ground from a farmer. Lord Portman tries to give a quarter of an acre. General wages 9*s.* and cider; have risen 2*s.* within the last seven years.

128. *Henry Parsons, Esq.*, agent to Lord Portman, Haselbury, Crewkerne.—Farms altogether 1,700 acres of land, of which 600 in Haselbury, and 400 in adjacent parish. Thinks bird-keeping a necessity, but does not think that boys need be taken before 10, and that farmers might give them up till then. Often has to employ a boy because parents come and ask to give him a job, but such a boy is no real good to him; has two at present employed under 10. Twine is of no real use, all very well for a small farm, no good for a large holding. A boy necessary here in ploughing to lead the horse for a heavy soil, and three horses required; ploughs himself by machinery.

Lord Portman has put up about 100 cottages in different parishes, while he (Mr. Parsons) has been steward. Generally very plain, to avoid breaking the roof, and so weakening the cottage; rent 1*s.* 3*d.*; that of the others 1*s.*, to make a slight distinction between the new improved cottages and the old. In neighbouring parishes, like East Chinnock, always find a great demand when one falls in, as let cheaper than those near belonging to other proprietors. Planted in rows of four or five generally, which is a saving in expense.

Very much prefers giving piece-work, and it draws distinction between good and bad labourers. It is very bad to have to give the same to a man who is worth double what another is worth, and can escape that by piece-work. The men like it better too.

129. *Wm. Peren*, occupier, South Petherton.—Gives 10*s.* a week wages and cider, but puts that at 1*s.* more than usual wages in the neighbourhood. Gives his carters and shepherd cottages, not the labourers. They mostly live on the farm, but some in Petherton, a mile distant. Women all do gloving, and can often make as much as the men make by their out-door work.

Only employs one woman, and she not regularly. Boys go to school very young, and come to work at 8 or 9, but have got a good deal of instruction before they come. Employs four boys himself, of whom the youngest is 10. Bird-keeping no real use; much better to send a man with a gun round all the fields than send a boy into each. Not cost more, and rooks do not like powder, and a boy gets a lot of friends to

Somersetshire.

Mr. Boyle.

k.

come with him and play, and often does as much harm as the rooks.

Early marriages are a great source of poverty, they marry without a home, and quite forget when they have got a house that they have to furnish it. Borrow money, and seldom get out of debt.

Gloving often makes men less anxious to get work, on account of the money made by their wives and daughters.

130. *W. Woolcott*, occupier, Montacute.—Gives his labourers 9*s.* and cider, carter 1*s.* more; when the labourer prefers it he gives him 1*s.* 6*d.* instead of cider, but he prefers the cider as a rule. Gives a good deal of piece-work, and much prefers giving it; taking piece-work and all together he would put the average wages throughout the year at 11*s.* besides cider. 9*s.* they make in the short days. Education is generally very well taken care of in the parish; there is a good school, to which many children come from other parishes. There are a few children who have never been to school at all, but that is their parents' fault.

131. *Wm. Pool*, vice-chairman, and occupier, South Petherton.—Poverty forbids many parents to send their children to school. It is a very poor parish, and strange it should be so, as it is the most fertile parish in the county. The fact is, there was a good deal of trade, which has gone down now, and the population is large, 2,500 people, and there is not much employment. Wages not low, 9*s.* and cider. The school has 130 children on the books. The number of cottages is sufficient, but the quality bad, many having only one bed-room. They belong mostly to small holders.

132. *C. Harris, Esq.*, Ilchester (pop. 800; acreage about 800; cultivation mixed; three-fourths grazing; no dairy; the rest arable.)—Boys begin to work at 10, bird-keeping, some even earlier. They drive plough, and go with horses. Think bird-keeping a cruel thing, keeping a boy out all a long wintry day. The parents want to get the extra shilling. Twine does just as well. The wages are from 9*s.* to 10*s.* and cider. Some do not give cider in winter. They have to find their own cottages, but it is a place with a diminishing population, and cottages are cheap; you can get a good one for 3*l.* or 4*l.* No girls work out; gloving is their employment, and it is injurious to some of the little ones leaning over the machine.

Women work out very seldom, sometimes in spring to pick stones. Bean planting has gone out, it is done now with a drill; nor is there so much weeding and that kind of work, and men do much work that women used to do. It is only labourers' wives who work out, but there is no stipulation that they are to do so. They do a good deal of apple-picking, and occasionally potato-digging.

A good many people go from this parish to work in the adjoining parish of Sock, which belongs to Mr. Wyndham. They have had no cottages till lately, but matters are getting better, owing to the Union Chargeability Bill. There is no church at Sock.

You cannot make the Factory Act apply to boys, but they ought not to work under 10. No restriction necessary on female labour. There is a national school, with an endowment of 50*l.* a year from an almshouses charity. There is only a mistress to it. A good many tradesmen's boys go to Archdeacon Fitzgerald's school at Charlton, which is a particularly good one. There is a Church Sunday school and a Dissenting ditto. The Wesleyans too have a day school. The principal farmer is a Wesleyan, and does much to support it. There is no night school. There has been one, but it was dropped, as the people did not take proper advantage of it. Most girls leave school at 10 to make gloves.

133. *Mary Eyres*, Ilchester.—Children are taken away from school to go gloving earlier now than they used to be. The youngest go at 7 or 8. When I was at school, children used to stay up to 14. Only stayed gloving 8 months, and did not like it; it did not suit my eyes. Tried it when 14 years of age, and then gave it up, and went to service. Could see very well at the beginning of the week, but at the end of it all the holes in the machine seemed run into one, and could not see one stitch from another. Beginners usually go to an experienced woman to learn it, and she does not always treat the children well, or give them all the money to which they are entitled. The rule is we get nothing for a month, and rise gradually after. The woman I went to was very strict, and when my eyes felt bad would not let me look up; thought it was laziness. She used often to bang me on the head. 2*d.* a pair is the price we got. The employer gave 2*s.* 2¼*d.* a dozen, and the women we worked for got the profit. Could make 21 pairs a week, and never worked by candle-light because of my eyes. Leaning over does not do much harm. We were always paid in money.

134. — *Wills, Esq., M.D.*, Crewkerne.—Thinks that in gloving it is keeping the eyes concentrated so long on a machine pierced with little holes close together, and not the mere looking at the brass, which the glovers say dazzles them, that is injurious to the eyes. There was a doctor down here some time ago trying to collect statistics about consumption, chest diseases, &c., among the poor glovers, supposed to come from sitting in a cramped attitude over the machine; but Dr. Wills attributes what consumption there is to the habit so common of coming once a week walks of six, eight, ten miles to the gloving place to bring the gloves they have sewn, and have them looked over. They are often kept out hours waiting for their turn, and then have to walk back, and if it rains it is naturally very bad for them. Any glove that there is a fault in is rejected, and the value of the pair (retail price) deducted from their wages, so that sometimes beginners will get no wages at all. They learn gloving from women called learners, who, in return for teaching them, take the gloves they make for the first few months. Most of the younger girls like working together, and has known as many as 14 work together in one room. At 14 or 15 years of age they generally begin to work at home.

They marry very early, men often only 18 to 22,, the girls as a rule pretty well gone in the family-way. There are not many illegitimate children, as the man generally marries her. Sometimes, however, have known the intention good, but put off so long that the child has come in the meantime. After that very often he will not marry her, for a girl who has had an illegitimate child is a good deal jeered by the other girls, and such jeering will often make him try to get off it. Still they have not the same ideas about the shame of it as we have. There is no infanticide, and women will work very hard to support a bastard. Mentioned the case of a women in Haselbury, which was a bad moral certainly, of a woman who was the most hard-working in the parish, and her cottage the best kept, who supported five illegitimate children.

There is a good deal of overcrowding in some parishes. Dr. Wills mentioned the case of a husband, wife, and seven children, of whom the four elder, two girls and two boys, all above 15, sleep in a two bed-roomed cottage with only two beds. The parents and younger children slept in the same bed, and the two girls in the other; there was a mattress for the boys. The way they manage sleeping so many in a bed, is having large beds and sleeping feet to feet; thus the children sleep feet to feet with their parents. The fact is that in gloving parishes there is more overcrowding than in others; for in other parishes most of the girls go away to service; where, however, there is gloving to be got, they prefer that as more independent than service, and consequently they stay at home as well as the boys, who generally work from home till they marry.

Chillington is about the worst off of the neighbouring parishes; with wages 7*s.* 6*d.* to 8*s.* a week, and no

resident squire or clergyman. It is a purely agricultural parish, and the women work out a good deal.

Gloving girls are of no use for service; constant work gives them no time to learn domestic duties; one who had a great wish to go out to service, was found on getting a place not to know how to make a bed. She had always lain in bed while her mother rose and lit the fire and did the household work, and then risen and gone to work. The general custom is to pay their mother 2*s.* 6*d.* out of their earnings and keep the rest. Most of them have very neat hands, just like a lady's, and few of them will work out of doors for fear of spoiling their hands, which then become hard and dirty, and useless for neat sewing.

135. Visit to glovers at East Chinnock, Friday, March 5, 1869.

Dr. Wills kindly took me to visit the cottages of several glovers in this village:—

(1.) We visited Mrs. Sartin's cottage first, one of Lord Portman's new cottages, sufficiently roomy for ordinary purposes, but rather crowded as we saw it, for there were working in the kitchen 11 persons, besides herself, and it being the day on which the work was collected to take to Stoke, other glovers were continually coming in with their contribution. Of these two were "learners," one 8 years of age, who has just worked a twelvemonth. At first she used to miss stitches, and Mrs. S. thought it was laziness, and proved her, but, she found when candles were brought in that her eyes were bad; so she has to leave off work sometimes, and cannot work by candle-light. Some eyes do fail; her own not near so strong as they were; she began gloving at 6; some have to leave off early at times, and some cannot work at all by candle-light; attributes it to looking at a brass machine, which dazzles.

Girls are "learners" for 12 months, for the first three of which they receive no pay; after that they are paid regularly, but overlooked, and Mrs. Sartin, as agent, deducts a certain per-centage for each pair of gloves. All her gloves nearly are cotton, and come from Southcombe of Stoke; he always pays in money; if a glove is damaged, he makes them pay a fine for damaging it, which varies according to the amount of damage done. For instance, once had to pay a fine of 3*l.*; for the girls had taken gloves out to Stoke in the rain, and they got wet and damaged; then they tried to dry themselves and did it badly; but Mr. Southcombe gave back 1*l.*; he gives 5½*d.* to 8½*d.* a dozen, and the work here is chiefly sewing the backs of cotton gloves. Agency is a new plan; used all formerly to have to go to Stoke once a week, and often wait outside till turn came, sometimes a very long time. Started a 6 o'clock in the morning, and at times were kept out all the next night.

Besides the eyes the chief complaint of illness is pains in the stomach, which come from sitting so long; some when they get it, get up and run about for a bit.

(There were 11 girls in the room, besides which some women came in in a friendly way to finish off just before Mrs. S. started for Stoke; all were sitting in rows at their machines like people at a concert. Very stuffy atmosphere; respectable woman and a good room, but too many people sitting in it to be wholesome.)

(2.) Mrs. Adams' cottage; roomy but an old cottage, and room low; still not so stuffy as the last; there were six girls working, of whom four were her daughters; the eldest an intelligent girl and very fast worker. All her own children began to work at 6 or 7, but for the first few years took half days at school. I pointed out the smallest and asked her age; she was a "learner," 7 years of age, and but lately begun, and works only half days, going to school the other half. There were a little one of 10, who her mother said would sit and work all day sometimes for 18 hours; she began when 6 years of age, before that she went to the infant school, and now goes to the Sunday school. The children sometimes feel bad from sitting at the machine so many hours; they cannot afford to take a long time for meals; sometimes they get up and run about for a few minutes. Sometimes when there is a great deal to do, they all sit and work from 6 a.m. till 12 at night.

In the winter it is all done in the house; in summer they take out their machines and work in the garden. Always find work going on, though more pressure at one time than another. Pay varies according to the goodness of work, up to 2*s.* 9*d.* or 3*s.*; they only sew the fingers; all their work is kid gloves, for Mr. Phillipps at Yeovil. If a glove is damaged they have to pay about half its value; but cannot say whether this is the rule, as have worked for Mr. Phillipps a long time, and perhaps get off easier than some others; sometimes get forgiven, but do not often damage them. Mrs. Adams herself takes the gloves into Yeovil at 2 in the afternoon twice a week. Had waited formerly many hours at Yeovil, till 9 o'clock at night, with a "hungry belly and cold feet," but that is done away with now.

(3.) Miss Adams has made 24 pairs a week at 2¼*d.* a pair, = 5*s.* 4*d.* a week. For men's gloves gets 2*s.* 9*d.*, women's 2*s.* 6*d.* a dozen, and a few pence more when in a hurry. Cannot earn much more than 3*s.* 6*d.*; has done as many as 34 pairs in a week, but that was working a day and a half each day. Some hurt their eyes very much; one girl could not go on after it began to get dusk. That girl began at 5 years of age; did not hurt her eyes then, but they have suffered for it since. White gloves do not dazzle the eyes so much as dark. (They were all at work on the best white kind.)

(4.) Mrs. Slieve lived in a wretched cottage, where she keeps a small grocer's shop; is agent for a good many Yeovil employers, and gets all kinds of stitching, and all kinds of gloves done. Never expects any of the girls to take wares from her shop in part payment for their work; but if they suggest such a thing, is quite ready enough to let them have tea, &c. (Dr. Wills denied this after, and said that it was a very common thing for people with small shops to be appointed agents, and abuse their agency by a truck). Two daughters were in the house, one of whom has had three or four bastard children; one of whom, a dirty, unhealthy-looking girl, aged 13, was sitting working at the machine. Another only 7 years old, just out of measles, had not begun gloving as yet, but was very fond of it, and could sew a pair as well as any one. Often said "Do 'ee let me glovey." Mrs. Slieve's other daughter, a girl of 14, had begun gloving at 5; was now evidently very far gone in a consumption; chest seemed in great pain, and had not strength to lift the kettle off the fire. Her eyes were nearly gone, which her mother attributed to the gloving; it had come on gradually, but she was the only one of her children whose eyes had failed so. They all put it on the use of brass in the machine, which dazzles their eyes. Dr. Wills thinks it comes from the closeness of the stitches, and if the holes were of different colours, it would not matter so much. Such loss of eyes, he says, is an unusual case; a weakly child, and the continual work naturally affected the part so much used.

Mrs. Slieve is separated from her husband; her cottage is very bad and untidy, and yet with the work of her family and the agency, she must get a good deal of money.

136. Extract from letter from *Rev. C. C. Goodden*, Montacute (population 992), March 5, 1869.

"My population is about equally divided as regards males between agricultural and manufacturing pursuits. Every girl is a glover, and continues so as long as circumstances permit. The employment of women in agriculture is almost unknown here. Decent labourers take their sons away from school at about 10 years old. Very poor and improvident labourers take them away earlier still, and seldom send them regularly at any time.

"Girls are taken away from school earlier than boys, generally speaking, to work at the glove. So great is the evil in this district as regards the glove trade,

Somersetshire.

Mr. Boyle.

k.

that Mr. Tregarthen, H.M. Inspector, is getting up statistics in the hope that some notice may be taken of the present state of things. I have an excellent school in the parish, so good as to attract artizan's children from other parishes. I adopt a graduated scale of payments, and though labourers' children may get the full benefit for 1*d.* weekly for what some pay 7*d.*, yet they get far less than any. Such are the facts; it is difficult to say what is the best remedy.

Yours faithfully,
C. C. GOODDEN."

137. *Rev. Arthur Salmon*, vicar of Martock (population 3,154; acreage 6,974; cultivation mixed).—There are few women employed in the fields, this parish being in the middle of the gloving district. One married and four unmarried being the total, and all above 18. But many women, married and unmarried, begin haymaking in June, and continue at field work, corn harvesting, gleaning, apple-picking, &c., till the middle of December.

—	Under 8.	8 to 10.	10 to 13.	13 to 18.	Total.
Boys employed in agriculture -	3	36	51	48	138

In spring—bean-dropping, potato-planting, weeding, hoeing, withy-peeling, and bird-keeping.

In summer—harvesting, bird-keeping.

In autumn—apple-picking, potato-picking, couch-picking, &c.

In winter—bean-dropping, couch-picking, turnip-hoeing, &c.

Many of these boys attend to and drive horses, clean out stables, &c. Has known a boy of 5 bird-keeping.

Considers the Printworks Act the best of the three plans. "I should recommend compulsory education up to 10 years of age, the guardians paying the school-pence in all cases where there are three children in one family under 10 years of age."

"The school is too far for the very young children in the outlying hamlets." School attendance is also affected by poverty considerably; but I think that withdrawing some little boys from work would soon raise the wages of the elder ones, and machinery will supply the place of any scarcity of labour. I believe that want of means is often an excuse for want of will, some of the largest hardest families being the most regular at school. Plenty of schools for all classes; as many as 14 in the parish.

On the register -	172	16	188	126	8	134	322
Average attendance	116	12	128	84	5	89	227

Would not say more than 12 boys and as many girls in the parish neither at school nor at work.

There are 40 boys and 110 girls at least, growing up with insufficient education; cannot read a chapter in the Bible or write intelligibly, and know no arithmetic. Could not pass standard 3, many of them not standards 1 or 2.

There is an evening school at which reading, writing, and arithmetic are taught, open 16 weeks in mid-winter, four nights a week, two hours a night. On the register 126, average attendance 80; all scholars above 12 years of age. The difficulties that attend it with the females are that they cannot spare time from gloving; with the males that they are tired and sleepy after a hard day's work, and by the time they have walked home and had their supper they are ready for bed, as they have to be up early in the morning. When the evenings are light they work in their gardens. No scholars under 12—"as the P. C. office does not allow any capitation for them, we cannot afford to take them.

"The cottage accommodation, though improved is still insufficient, and has a bad effect on morality, health, and comfort; the greater number belong to the small landlords, tradesmen, &c. Some of the principal landlords have a few, which are generally in very good order. Many built on wayside waste, belong nominally to the occupiers. The rent is generally rather high for an agricultural neighbourhood. I do not think the truck system is carried on to any extent in this parish or neighbourhood. The number of illegitimate children is no greater than in Mr. Salmon's old Wiltshire parish; but there are a good many were married not with child, here it is the exception; but under the circumstances the man will generally put up the banns."

Special Report.

1.—The employment of boys in agriculture.

The farmers who are better educated themselves and rent large farms are becoming more anxious for the education of the labourers, the smaller and more ignorant farmers still oppose it. Many of the former would be glad to see boys at school until they are 12, or at least 10 years of age. If boys are not allowed to do any agricultural work until they are 12 years old, many say that they would become "soft" and not fit for much in the fields, and would probably seek, if possible, higher employment. At present, considering the amount of wages, and the little machinery generally used in farming, I should think that a boy ought to go to work at 10, but certainly not before. I have never seen any half-time scheme which I think would be satisfactory. A low standard of examination, within the capacity of an average country boy, sent regularly to school until he was 10, might perhaps be enforced, and a certificate given before employment, or a certificate of attendance at a national school for six years, with 400 attendances at least in each year.

E. ARTHUR SALMON,
March 1869. Vicar of Martock, Somerset.

2.—The employment of children in gloving at their own homes.

There are many instances of children who are set to work at gloving by their parents when they are only 7, or even 6 years of age. As a general rule they begin work at 8 or soon after. They grow up in a state of deplorable ignorance, very few of them being able to write their own names. At an early age they become independent of their parents, and submit to no control, even when it is exercised judiciously. The evil-disposed at once go out to lodge, if their parents do not allow them to keep late hours. Their morality is very low, their ignorance excessive, and their language and behaviour often very rough and coarse. Sunday schools do a little for the best of them, but the roughest will not attend them, as they are ashamed of their utter ignorance, and impatient of any rule. I do not think the gloving seriously injures health, but the early employment at it, and the many hours of work, contract the chest, and interfere with both bodily and mental developement, especially the latter. The number of hours of work at home is often far beyond the number in factories. I do not think a girl should be allowed to work until she is 10 years old, and has attended a national school for six

years, of 400 attendances in each year, or could pass a certain easy examination.

E. Arthur Salmon,
March 1869. Vicar of Martock, Somerset.

3.—A few cases of overcrowding in cottages.

1. In a cottage containing one living and one bedroom, about 11 feet square each, there lived together I. M. and E. M., man and wife, V. M., and L. M., man and wife, (nephew of above), M. A. M., unmarried woman, (daughter of I. M.), and her three illegitimate children, aged about 18, 10, and 5, respectively, and sometimes another man (son of I. M.), sleeps there also. The cottage is the freehold of the nephew.

2. Man and wife and 4 children, 2 girls, 17 and 12, and 2 boys 13 and 10, in a bad cottage with one small bed-room; boys and girls sleeping in one bed together.

3. Man and wife and 7 children; girl 18, boy 17, and downwards, in one room.

4. Man and wife and 6 children; girl 16, boy 14, and downwards, in one room.

5. Man and wife and 7 children, eldest 14, in one room.

6. Man and wife, daughter 28, 2 children, 17 and 9.

7. Man and wife and 12 children (once 14), eldest 22, and downwards, in two small rooms.

8. Man and wife, daughter and 5 illegitimate children, (once 7), 18, 17, and downwards, in one room.

9. Man and wife and 6 children, 16 and downwards, in one small room.

Numerous similar cases.

Several cottages unfit for human habitation.

E. Arthur Salmon,
March 1869. Vicar of Martock, Somerset.

138. *Rev. Henry Bond*, vicar of South Petherton (population 2,400; acreage 3,300; cultivation mixed).—Boys begin work at 8 in the fields; women are chiefly employed in gloving, only occasionally in apple picking and potato picking; all the girls make gloves. There was a great deal of corruption in the parish, but that is diminishing now not so much the consequence of gloving itself, as the waiting about some day in the week to have the gloves examined. That is not done so much now, as people are employed to take them about. The packmen form a great abuse; they travel about and sell a girl a shawl or dress, trusting her, and only taking 1*s.*, saying they will come again in a fortnight, which they do, coming and taking another shilling, and when it is nearly paid off selling them something else, so as never to let them out of debt. Gloving girls are constantly pulled up in the County Court.

There is a boys' school with 109 on the books, and a girls' school with 149. During the last three years every child presented for examination has passed. There are also dame's schools, but in these the number of scholars is small. The cottages are much too crowded, but their condition has of late years been improved. There has been a great exodus, to Queensland principally, since Mr. Bond has been here; the population has therefore slightly fallen. The people eat chiefly potatoes and dry bread; they do not get so much meat as they used; formerly scraps of meat were sold to them in the market, now such scraps all go up to London by railway.

139. *Rev. Thomas Brancker*, rector of Limington (population 343; acreage 1,583, of which under 400 acres arable).—A small parish; half a dozen women, perhaps, and six or eight boys employed, the former not continuously. "I believe it to be a bad school," but there is not enough of it to be worthy of special report here. A great deal of apple-picking in the autumn, and they sometimes suffer from the wet grass at that season. It is a gloving parish, and Mr. Brancker dislikes gloving much, especially the carrying system. Mentioned the case of a girl, a carrier, now dying of a consumption brought on by carrying gloves in all weathers to Yeovil.

Somersetshire.

Mr. Boyle.

k.

There are between 45 and 50 children on the register; average attendance 35 or 36; has been slack lately owing to illness. Has no night school, as he has no one to depend on but himself, the mistress having enough to do by day. Most of the cottages have two bed-rooms, but they are often very small. They chiefly belong to the landowners, and are let with the respective farms; there are only four or five in other hands. Rent 1*s.* to 1*s.* 6*d.* per week. On Mr. Digby's property the farmers are not allowed to charge more than 1*s.*

140. *Rev. John Hancock*, Haselbury (population 835; acreage 2,034A. 1R. 24P.; cultivation rather more arable than pasture, 3-year course).—Boys work out from 10 years old all the year round. As a rule they leave school earlier than girls; has fewer big boys than he used to have, few over 10 years, but there are few in the parish who do not come to school more or less. Would like to keep them till 12 years of age. "Those who leave earlier must be insuffi-
"ciently instructed, and will probably forget the
"little they have learnt." The difficulty is that the earnings of the children between 10 and 12 can be ill spared by the family. There are good Government and infant schools, fairly taken advantage of.

Number on books 113 { 42 boys. 31 girls. 40 infants.

Under 6 - -	46	Under 9 - -	83
„ 7 - -	13	„ 10 - -	8
„ 8 - -	13	„ 11 - -	6
„ 9 - -	11	„ 12 - -	10
	—	Over 12 - -	6
	83		—
	—		113

Had a night school, but had to give it up; could not get the boys he wanted; could get nothing but small boys. In fact when he came there were very few big boys grounded at all, and all he can work on is the very young.

The girls do not work out, they are employed from about 11 years in weaving, partly at home, partly in a small factory. The same may be said of the women, but a few go into the fields occasionally in the summer months. "I should say it ought to be restricted, but
"I do not think the employment of females and
"young persons in agriculture is quite so injurious
"to health and morals as the employment of them in
"factories."

"There are many good cottages, but the generality
"of them are very inferior indeed. Many have
"only one bed-room, and in some cases three gene-
"rations occupy it. The moral result of course is
"bad. The water is sufficient; the ventilation of
"the old dwellings, thanks to holes and crevices, is
"good. In new cottages with tight-fitting windows
"and doors, and several sleepers in very small rooms,
"I look upon the absence of holes and crevices as a
"very serious matter." Badly off for gardens and allotments.

141. *Rev. W. Vassall*, rector of Hardington Mandeville (population 668).—Has but one boy in his school over 8 years of age, and that is a son of Mr. Parson's bailiff. A very poor parish. People take away their children to keep birds, and when a little older to drive horses. Is very sorry to find that boys are taken away earlier then they used to be, and attributes it to the fact of so many men going away now, that much work has to be done by big boys that used to be done by men, and little boys have to do men's work. There are lots of infants in the school, women are glad enough to send them when themselves go out to work. It is wonderful how the children stand the out-door work. They seem to thrive under it, and yet Mr. Vassall has seen a boy of 6 or 7 asleep under a hedge in soaking wet ground. It is the parents with long families who wish them to work for the sake of the 1*s.* 6*d.* Do not see how you can

Somersetshire. — Mr. Boyle. — k.

fix any age to keep boys at school, but would be very glad to keep them till 10; if they only stay till 8 they have not time to learn anything.

Langport Union.

142. Meeting of the Board of Guardians, Langport Union, Feb. 22, 1869; Robert Pittard, vice-chairman, in the chair. Present, F. Pinney, Esq., Somerton Grange; Messrs. Alford, Fry, Reynolds, Bond, &c.

(1.) The union generally comprises the Somerton hills, a lias formation, and a considerable bit of moor about Langport, Kingsbury, and Compton Dunden; the former is mostly arable, and employs a good deal of boys labour; the latter mostly dairy and pasture, and requires little. Boys are employed in agriculture generally from the ages of 8 or 9 to keep sheep or pigs, or birds from the corn; at 10 years of age they would begin picking stones, "driving plough," a phrase which includes driving horses at all times. A smaller boy too will often go out to assist a bigger, who has regular employment. When they begin driving plough they are engaged all the year round.

(2.) As a rule girls are not employed in out-door labour at all; gloving is their chief occupation; but in the parishes such as High Ham, that are more distant from the gloving centres, some little girls will be found doing much the same work as small boys, such as bird-keeping, &c.

(3.) The same remarks apply to the labour of women. They prefer gloving. In the winter they pick a few apples; in the summer they make hay.

(4.) The chairman said that his cottages were about a mile distant from the work. Cottages are generally on the land; but some in the village; not dotted about on the land, but in clusters of houses.

(5.) Men work 12 hours, 6 a.m. to 6 p.m. Women come on to work at 7 a.m., and leave off with the men.

(6.) Not necessary to restrict boys labour seemed to be the general sense.

(7.) There is not sufficient employment for women in the fields to make restriction necessary either.

143. *Wm. Gray, Esq.*, agent to F. Dickenson, Esq. (C. Langport B. G.), Kingweston (population 107; acreage 1,100, two-thirds of which is arable).—There is very little employment here for boys under 12; at that age they begin principally as carter's boys. Bird-keeping generally done by an old man with a gun at 1*s.* a day; worth half a dozen boys, who you cannot depend on. A boy is no use till 12; farmers give them 2*s.* 6*d.* at that age, Mr. Gray, 3*s.* 6*d.* All the girls do gloving, which they begin very early, even younger than 11; can earn a lot of money at it. Women hardly ever work in the fields now; only knows one instance in the parish, down at "Lavers." Never see women weeding. Two sisters of a shepherd use to work, but have left off now, and taken to gloving. Tried to break through the cider-truck, but farmers would not follow. Offered 1*s.* 6*d.* a week to his men if they would give up cider, but it gave dissatisfaction. They gave a good reason, it helps down the dry bread; they soak the bread in cider. Gives 9*s.* a week and cider, and expects the men to find a cottage. Always prefers to give an extra shilling, and let the men find their cottage; makes them more independent. Carters get another shilling. It is a hardship on the farmer always to have to pay according to a certain rate; a strong fellow receives just as much as a man not up to half the work.

Most of the boys come from Charlton to work, a mile and a half; there are not enough cottages on the property. Generally what there are are very good; have built a good many, and they are generally let cheap; usually 4*l.* a year; let according to garden ground, of which Mr. Gray is an advocate rather than of the allotment system. Changes people from cottage to cottage, as the family grows, to prevent overcrowding; but the people hate being moved, and if they were to die soon after, would attribute the fault to the agent. In East Charlton the cottages, which belong chiefly to the occupier, are very bad.

Let allotments at both Charltons; give new cottages nearly a quarter of an acre apiece. The clergyman at Charlton Adam lets allotments too. We let about a quarter of an acre at 7*s.* 6*d.*; 20 lug would be 3*s.* 9*d.*; if it is neglected take it away as soon as possible. They pay well, and are never in arrear. It is well worth its price to them. Potatoes are the chief crop, and a few beans for the pig; it is just large enough to get a change of crop. It is strange that they go on now with potatoes in spite of the disease.

144. — *Snook*, steward to Lord Ilchester, under whom he occupies a farm (Somerton).—Employs three boys under 12 years of age; they are engaged in looking after sheep, pulling turnips, and driving horses; such work as a little boy can do just as well as a man; you could not possibly do without them. They are more useful than women. You can get a boy for 2*s.* to do work for which you would have to give a woman 4*s.* 6*d.* The women chiefly do gloving and shoe-binding, and there is a factory which employs 100 girls. Employs few women, and they labourers' wives; is not an advocate for women's labour; it is cheaper to employ men, they do more work, and you cannot get women out in the wet weather. Lets apple-picking to men, and they bring out their wives and children to help.

Wages 9*s.* and liquor; liquor sometimes 2*s.* 6*d.* a week, sometimes 1*s.* Would rather give 1*s.* 6*d.* instead of cider, but they prefer cider. They have to find their cottages. Carters get 1*s.* extra. Gives as much task-work as he can, more profitable both to farmer and labourer. Some farmers on Lord Ilchester's property have no cottages, and most of the labourers who work in the neighbourhood of Somerton live in the town, the women prefer it. Men who live out here even go into Somerton to the public-houses; it would be better to have houses on the farm. Has three on his farm, for which he charges only 1*s.* a week, whereas in town they have to pay 4*l.* or 5*l.*; lets them cheaper, as an inducement to stay. As a rule, the labourers hold of the landlord; the system works better, when they hold of the farmer; but the farmer sometimes takes an unfair advantage of his power.

145. — *Nutt*, Compton Dunden, occupier.—Farms 800 acres. A purely agricultural parish; there is little gloving, but some of the girls go over the hill to work in the factory at Street. Most of them go to service, and they work out a little. Half the year half the women in the parish go out to work; employ about four on the farm, and they do not come out in the wet; in the summer every one goes out. They get 8*d.* and about three pints of cider. Their work is thrashing, bean-planting, hoeing turnips, weeding corn, apple-picking, &c. Men get 9*s.* a week and half a gallon of cider daily, and find their cottage. The shepherd and carter have their cottages given. Not so well provided with cottages as some places. Most belong to Lord Ilchester, to whom three-fourths of the parish belongs, but some are out on lives.

Boys begin work at 8 or 9, bird-keeping and sheep-keeping. We do not allow them to lead plough so young as that, but it is done in some of the smaller holdings.

There is no school at all, a few children go to Lady Hood's, 1½ mile distant. There is a Sunday school, but few come. Four boys work for me, and not one can read or write, they have never been at school; a school is wanted very bad. There is a good attendance in church on Sunday afternoon, not in the morning.

Some of the cottages are much overcrowded, there is one up above here with at least 10 people living in it, mostly grown up; cannot say how many of them

are relations, do not think many. Many women come to be married in the family-way, our carter married the other day, and his wife was confined a fortnight after marriage. The cottages have good gardens generally, and the labourers have potato ground on the moor, very good land. They pay at the rate of 6*l.* an acre; sometimes they have as much as a quarter of an acre. There is a good deal of moor in the parish, but no withy-peeling.

146. — *Bond*, occupier, Kingsdon.—Women do gloving, which is the general thing throughout the union. The pay is very bad, about a day and a half's work for a day's pay. They prefer it to working out; very few work in the turnips now, they only come out in the harvest.

No girls work; employs four or five boys; does not know whether they have been to school; rather prefers those who have not; does not mind reading and writing, but dislikes too much education. Never inquires a boy's age, when he comes bird-keeping; supposes they generally come at about 10, "to sing a "song to rooks." The young men go away a good deal, mostly to Wales, but they generally come back, and settle down, seeming to like home.

General wages 9*s.*, and shepherd 10*s.*, with cider. Gives an extra sovereign in harvest. Gives the same wages to shepherds and ordinary labourers, but gives a cottage and garden to the former, not to the latter. They never get less than 9*s.* in a week; never sends a man home for bad weather. The real thing wanted is more cottages, in the present condition of the people it is out of the question to ask more than 1*s.* rent. Many are allowed to fall down, and the people crowd into Somerton. The usual rent for a cottage is 1*s.*

147. — *Reynolds*, occupier, High Ham.—Boys generally come to work at 9 or 10; they used to come earlier, but there is a capital school now, and the parents like to keep them there longer than they used, and the farmers have to give way. Parents are very willing to send their children to school, if it is a good school. They are not really apathetic about it; they like to send them, but of course if they are old enough to earn money it is an object in a long family.

No girls are employed; women very little since the drilling came in; they work in summer a little; boys and shepherds do the turnip-cutting.

Wages 9*s.* the lowest, some give 10*s.* and cider, some an extra shilling, and no cider; men as a rule prefer the cider, as they cannot get so much elsewhere for the money as they can from the farmers. There are some very bad cottages.

Women take to gloving more than working out; they cannot take so much care of the family if they go out. They do not earn much money at gloving, but are improved by staying at home.

148. — *Alford*, occupier, Curry Rivell.—Does not care about employing boys much, only wants them when wheat is appearing, not when just sown, and again when it is ripening, to keep off the sparrows. But a pistol and a little powder will frighten them much better, or sending a man to kill and hang up one. Boys only drive them from one place to another, they frighten them with clappers, that is, knocking bits of sticks together, but they generally only go and settle on the next field. When a little older, say 8 or 9, they are taken to drive horses, and once taken to do that, work is found for them most of the year. They are really wanted here to drive the horse in ploughing, as the soil is heavy, and three horses are required, so that a man cannot drive with reins, and plough too. They begin at 14*d.* for the week, Sunday included, and the pay rises gradually.

Few women work out, they take to gloving mostly; they are above working out now, it makes their hands dirty, which they do not like. Those only whose husband works on the farm, will work out, and they only come out now and then in busy times, such a thrashing, &c.; they are the only ones a farmer has any control over.

149. — *Fry*, occupier, Curry Rivell.—Women do not like working out now, have got above it; it is very difficult to get them out now except in hay-making. Gives as wages 10*s.* a week and no cider; carters and shepherds a little more. Men at first do not think they like to have no allowance of cider, but they get to like the extra shilling; the wives like it. Two-thirds of his men have cottages at 1*s.* a week; they are the best off, as others have to give 1*s.* 8*d.* or more for a cottage. A farmer has not such a hold over the latter, however; they get more independent. But for the labourer to hold of the farmer is the best system, if they get on well; has some on his farm now, who held of his father for years. Gives a boy when he first begins work 3*d.* a day.

150. *Wm. Lock*, Somerton, age 11.—First went to work in the fields at 10; began driving plough; in the winter and summer; get 2*s.* a week; come to school now for two months. Like school better than work. Began at ploughing; began at 2*s.* a week; only lead the horses with the plough, not hard work.

151. *Wm. Trott*, Somerton, age 9 next birthday. —First went to work at 8, driving plough. Like coming to school better than ploughing. Drove the plough two months, and left off just before Christmas; expect to go again at Lady-day, when the other boys go. Get 1*s.* 6*d.* a week; am the eldest of five; got three sisters, and "one buried."

152. *Darius Lewis*, age 10, Somerton.—Used to be kept at home to look after younger brothers and sisters, whilst the elder ones went out to work. Brother Thomas, aged 18, works out. Been at school four years; did not come often at first, or in harvest, as had to stay at home, while mother went out leasing. Like coming to school best. Do no other work; father wants to keep me at school two or three years longer.

153. *Wm. Dolman*, Somerton, age 12.—Began to work when 8 years old. Began driving plough, and got 2*s.* a week, get 2*s.* 6*d.* now. Keep sheep sometimes besides driving plough, never kept birds. Come to school two months, work the rest of the year. Work for Mr. Barnard, who keeps a farm. Like coming to school best; go to night-school in the winter pretty regularly; hard work driving plough.

154. *John Lock*, Somerton, age 6.—Goes bird-keeping, likes it better than coming to school. Halloos at them. Comes to school 5 months, keeps birds 7. Goes out bird-keeping from 7 till 6; not on Sundays; gets paid 6*d.* a week.

155. *Henry Ford*, Somerton, age nearly 9.—Goes bird-keeping; begun at 7; gets 1*s.* 6*d.* a week; likes coming to school best; keeps birds part of year, comes to school part; comes to school most; knocks sticks together, and halloos out. Goes wet and fine days, not on Sundays. Stays out from 6 to 8; takes dinner with him. Goes out whether wet or fine; does not get wet, for if it rains, he sits under a tree. Drives plough too; began that at 8, and found he could manage the horses all right. Get 2*s.* a week for it. Likes driving plough better than coming to school or keeping birds.

156. *Mary Jane Colifax*, Somerton, age 10.—Has two younger brothers; stays at home to look after them; likes coming to school better than staying at home. Father is a carter; mother has bad eyes, and wants her at home to look after the younger ones.

157. *Sarah Cox*, Somerton, 10 years.—Used to go out leasing; do it in summer; go out with mother; mother goes to weed the corn. Father is a labourer. Mother works out in the fields a good deal. I stay at home to take care of younger sister, when mother goes out to work. Never frightened birds.

Somersetshire.

Mr. Boyle.

k.

158. *Caroline Peppard*, Somerton, age 12.—Went last year to pick up potatoes with father, because he could get no one else.

159. *Ellen Summering*, Somerton, age 8.—Goes out to work in the fields, and likes it. Goes leasing, picking apples, and potatoes; likes it all; father is dead, mother in service; picks up potatoes for her uncle.

160. *Elizabeth Davey*, Somerton, aged 9.—Father is a farmer (N. B., one of the small farmers, with perhaps 12 or 14 acres). She sometimes goes setting peas and potatoes, and goes leasing and picking up potatoes. Went last autumn apple-picking. Likes coming to school when it is cold, working when it is warm; never goes out scaring birds. Always works with father. "Father said I did more work "last summer than I had any summer before." Has five brothers, one a mason and another at work. Little brother not as tall as me leads horses; father is not afraid to trust him with a horse and waggon. Father has two horses.

161. *Eliza Perren*, High Ham, aged 14.—Was 10 or 11 before she went out to work. Went apple-picking, leasing, pulling beans, &c. Only went out now and then. Used always to go out with grandmother. Is going to leave school, and take to gloving. Would rather go out to service, and do out-door work in the summer.

162. *Jane Sweet*, High Ham, aged 9.—Goes picking apples and leasing with her mother. Comes to school regular, and likes school best. Is going to glove; does not like the idea of gloving. Would rather go out to service.

163. *Ellen Ralph*, High Ham, aged 12.—Goes apple-picking, and beating out the ground, planting potatoes, and leasing. Comes to school in winter and works in summer. More work than school. Does not know which she likes best. Gets 6*d.* a day. Used to keep birds. Was not 9 when she began. Stayed out 8 till 6, hallooing at them. "It is bird *starving*, not bird keeping." Did not go out on Sundays. Does not know what pay she got, mother had the money. Like keeping birds; not hard work. Leads horses sometimes. Father is a labourer.

(N.B.—A younger sister did much the same.)

164. *James Small*, High Ham, aged 11.—Goes out driving plough. First year of doing so. Likes coming to school best. Used to go with his brother keeping birds for amusement. Frightened them with the sticks, and "Tom had a dog he put at them."

165. *James Burnett*, Somerton, aged 12.—Began bird-keeping at 8 for a few months. Hallooed at them. Liked it, but would rather come to school. After began work did not come to school again. Work all the year round. Began keeping sheep at 10. Drive plough sometimes. Get 2*s.* a week pay. Father dead, mother "do glovey." One sister at service.

166. *William Matthews*, Somerton, aged 11.—Minds sheep all the year. Used to keep birds. Began at 6 years. Began keeping sheep at 7. Keeps sheep all the year. Gets 2*s.* Used to halloo at the birds. Kept birds all the week and Sunday too. Used to come to day-school before went frightening birds. Like coming to school best. Father is the sexton.

167. *Frederich Which*, Somerton, aged 13.—Cannot spell his name. Began work at 7, driving plough. Kept birds at 8. Left school at 7. Thinks he recollected all he learnt. Keeps sheep now for Mr. Coxe. Works for Mr. Coxe all the year. Gets 3*s.* 3*d.* a week and cider. Began at 2*s.* Has no father. Mother "do glovey." Has three brothers, but none work; two come to school.

168. *Henry Brown*, aged 14 (Somerton).—First worked at 7, bird-keeping; hallooed at them. Went on Sundays too. In summer worked from 6 to 6. Began driving plough at 8. Went to school before began bird-keeping, but have forgotten a great deal. Could not read and write now. Would like better to come to school. Father is not right; "mother do glovey." Has two sisters, who also make gloves, and a younger brother who does not work. Looking to the beasts is his duty now, he has done it about two years. Gets 4*s.* a week; began at 1*s.* 6*d.*

169. *Sarah Taylor*, Somerton, aged 8.—Father dead, mother works in the factory. Has two brothers older than herself; one sister older and one younger. Sister comes to school, but is ill at grandmother's now. Goes out leasing with mother sometimes. Used to go apple-picking and potato-picking when 7 years of age. Got 6*d.* a day for it. Does not do any now. Generally "gloveying," but not all the year. Likes it better than working out. Did not begin till she was 8. Works 12 hours, 6 to 6. Has a holiday once a week. Gets tired sometimes, but always quite fresh in the morning. Comes to school twice a week, not to the day-school. Mother gloveys, and never gets tired. Has a little sister at home younger than me, who gloveys.

170. *Sarah Ann Pivott*, Somerton, aged 8.—Father cleans leather, mother "do glovey." Has three brothers and one sister, all younger. Stays at home sometimes to take care of them. "Mother takes care of them when I don't." Likes coming to school best. Goes out leasing with grandmother for about a month. Does not like leasing, it is hard work. Have to stay out all day, 8 to 7; dine in middle of day. Brothers and sisters do not come out. Began to go at 7 or 8. Goes potato-picking too, but dislikes it; it is hard work. Goes apple-picking; likes that. Eats the apples. Gets her food for doing it. Makes gloves besides, and makes gloves more than she goes out to work. Has begun gloveying between two and three years. Likes it better than going out to work in the fields. "Mother makes four pair, and "I make two pair in a day." Never any the worse for stooping over the machine.

GLOVING.

171. *Mrs. Sweet*, High Ham.—Has made gloves for 30 years. Hopes that we will not do anything to interfere with her making gloves. Her boy told her that the other day a gentleman had come down to see the schoolmaster, and all the gloving was to be stopped. (N.B. I assured her she would not be interfered with.) Her eyes are not so good as they were when she was young; thinks that the brass has affected them. Thinks it bad for the health, sitting so long without taking exercise. Does not like her girls doing it. One fell sickly, and she thinks died of it. That one has suffered from it too (pointing to a sickly looking girl crouching over the fire.) Gets 2*s.* 2*d.* a dozen pair. Used to be able to do six pair a day, but cannot do so much now, on account of her eyes. Has earned more sometimes in a week than her husband. Recollects when she got 5*s.* a dozen for sewing gloves, but the price has come down very much.

Used sometimes to work in the fields. Does a little now, but finds it does not pay as well as gloving. Does a little for herself, such as leasing. Her girls have never done a day's work in the fields; very few here do. Has two children at school. Had a boy working at bird-keeping and plough-driving at 7 years of age. Had 1*s.* a week and his keep.

172. *Mary Ann Fido*, High Ham.—Is a glove carrier. Gets gloves from all parishes near—Pitney, Huish, Langport, Othery, and Ham, and goes in with them every Saturday to Mr. Taylor's, the glove manufacturer at Taunton. In the evening she brings out gloves again to distribute. Gets 1*s.* 4*d.* a dozen for the gloves, and pays the glovers 1*s.* 1½*d.* a dozen, getting 1½*d.* profit. All paid in money, no truck. Some women will make two dozen pair in a week. They make cloth gloves in summer, and thread in

winter. Have to be hand-sewn, because the ends fray. The machine is only of use for kid gloves. The machine is bad for the eyes, it dazzles so.

173. *Sarah Lark*, Somerton, age 14.—Have not come to school the last two years, been learning gloving. Began last winter, and kept on ever since. Sits from 8 in the morning till 9 at night, and don't like it at all, sitting so long. Does it at her aunt's house, and goes home to dinner. No one else works there, only she and her aunt. Does a dozen pair in a week. Gets 2*s.* a dozen, always in money. Never has a holiday. Sitting so long gives sometimes a pain in the stomach; have had that. Hurt eyes, but never hurt hers yet. Expects to go to service, and would prefer it.

174. *Susan Brown*, Somerton, age 11.—Began gloving when going on 10; likes doing it. Works from 9 in the morning till 11 at night. Gets tired of sitting so long, gets sleepy. Has a little sister going on 8, who began gloving at 7. Can do three pair a day (cotton); they give 2½*d.* a pair. Always pay in money. Hopes to go to service, when a little older. Mother "do glovey. I can do as much "as another." Does not mind stooping over it. Never has a holiday, and never goes out while working. Little sister gets tired, and then nurses baby. "I am too busy all the week, and only nurse baby "on Sunday."

175. *Emmeline Cox*, Somerton, age 8.—Began to make gloves at 5. When began could make one pair a day, now can make two. Gets a halfpenny a pair, small gloves. Got no mother, and "father, brothers, "and sisters no good to me." Lives with grandmother. Likes making gloves. When older would like to go to service. Get tired gloving. Work from 7 in the morning till 8 at night. Not with a machine.

176. *Emily Ray*, age 10, Somerton.—Makes gloves. Has worked in the fields; has been out leasing, apple-picking, and potato-picking. Likes gloving best, not such hard work. Does more gloving than working out. Was only 7 years old when first went to work in the fields. First began gloving at 8. Does not work with the machine. Gets 14*d.* a dozen, cloth gloves and thread gloves. Gets tired sometimes, and then rests, and has a holiday sometimes. Works 12 hours, 6 to 6. Sometimes works by candle light. Likes apple-picking too. Likes apple-picking better than coming to school. Has never been to school in the week, except to night school. For tatey and apple picking gets 6*d.* a day. "Mother do glovey." Father is a labourer.

COTTAGES.

177. Col. Pinney's cottages at Somerton. Extract from Diary, Feb. 23:—

"Visited one of Col. Pinney's model cottages with three bed-rooms. Porch, with one room over, very small, but other two bed-rooms good; one had a fire-place. Below were two rooms and a lean-to, in all three rooms, a kitchen, back kitchen, and store-house. Nice cottage, not too good, and room enough for people in it, labourer, wife, and nine children, mostly young. Cost probably about 200*l.*, let at 4*l.* Built of red tile and blue lias.

"Saw also a converted cottage (with back kitchen and bed-room over it added). Rooms rather small, and great complaints of smoke. Floor, stone. Three bed-rooms, but one used as a store-room for potatoes. Five children beside husband and wife, but eldest only 8 years old. Three were already put to bed together, the three smallest. Mother just come in from working out."

178. Mr. Dickenson's cottages at Kingweston. Extract from Diary, Feb. 26, 1869:—

"Coming back visited some three cottages Mr. D. had built in a row. Large and roomy, with three rooms above and three below. Boiler inside, which a pity. Door opens into a little square vestibule, and staircase opposite. Kitchen door on right-hand side. Neat on the whole. Only waste of space a little landing out of the big bed-room over the staircase, which might have been a cupboard. One fire-place upstairs."

179. Prince of Wales' model cottages at Isle Brewers.

Have three good-sized bed-rooms, two of which have a fire-place. The staircase seemed the drawback. It is spiral and very narrow, and the old woman whose cottage we visited did not know "how, if it "pleased God any one was to die, he could be got "out." The porch is inside, and the stairs spring from it. There is a closet under the stairs, and a large closet upstairs, besides the three rooms. There are two rooms downstairs, and outside, touching the main building at right angles, an outhouse, containing boiler and privy. Did not seem a good plan; the privy door at right angles to the back kitchen window, but they said there was no smell in the back kitchen. They were built at a cost of 300*l.* the pair, and at first the Duchy expected a return of 6*l.* per cent. on the outlay. However, they let them to Mr. Miller, the rector, at 4*l.* a piece, and he underlets them at 1*s.* 6*d.* weekly. It is strange then, though infinitely superior to the other cottages, he could only got two widows to take them. The people do not seem to like supervision, as the cottages are close outside Mr. Miller's gate.

180. *Rev. Archdeacon A. O. Fitzgerald*, rector of Charlton Mackerel (pop. 387; acreage 2,200; cultivation mixed).—Boys work all the year round from 10 years. There is little bird-keeping. No restriction necessary on their labour, or that of females. Women work out very little except in haymaking and apple picking, and girls not at all.

There is an excellent National school, built and endowed by the will of the late rector. A number of children come in from other parishes, even tradesmen's sons from Ilchester. The rector gets 15*l.* a year from the endowment; the schoolmaster 90*l.* There are many more boys than girls, but that happens to be a chance at the present time. There are more boys than girls in the parish. There is also an evening school in the winter, which is much appreciated.

181. *Rev. Charles Carey*, rector of Kingweston (pop. 172; acreage 1,155; chiefly arable).—In this parish boys begin work at 11 or 12, but in neighbouring parishes, which are poorer, boys go to work at 8 years of age. No girls work out in this parish, and very few in the neighbourhood. Women only occasionally for bean setting, haymaking, apple picking, and other odd jobs. No necessity to restrict their labour. Boys should not work before 10–11 years, "but I do not think any legislative restriction is "called for, or could be rightly enforced. It is only "in the poorest families that the boys go to work so "very young, when their earnings, 2*s.* 6*d.* a week, are "almost a necessity to the parents."

There is a well-attended parochial school. "Cot-"tages good and convenient; not numerous enough "for the labour of the parish, which is supplemented "from the adjoining parishes, but the distance is "very little. This parish is all the property of a "resident landlord, and consequently better off than "many others."

a. It is not desirable to restrain the earnings of a family by law, unless for sufficient reasons, sanitary or moral.

b. Agricultural labour is healthy, and not *demoralizing* to boys.

c. Half-time system is impossible in farm service.

d. In good schools a boy of 11 years of age ought to be able to read thoroughly well, write a good legible hand, spell correctly, and do compound rules of arithmetic, money, weights, and measures, with an intelligent knowledge of Scripture, and his Catechism;

Somersetshire.

Mr. Boyle.

k.

in short, quite a sufficient elementary education for his class of life. This he may keep up by night-schools.

As inspector of a rural district (36 parishes) I find many schools in small parishes thoroughly inefficient through want of funds to procure proper teachers, the burden of maintenance being thrown almost entirely upon the clergyman.

182. Inspection District rural; 36 parishes; area, about 100 square miles.

Only $\frac{1}{14}$ of children in school are turned of 12 years, and these are almost all girls.

Archdeaconry of Wells, viz.:—

Nearly half the county of Somerset. School prize examination open to all parochial schools.

Average age of competing children—

Large schools, 1st class, 11·4 years,
„ 2nd „ 10·12 „
Small schools, 1st „ 11·1 „

These are chiefly girls; the average age of these boys is only 10·6.

Average age of prize winners (boys) 11·3.

This shows what a fair amount of education can be given at an early age.

The number of boys at school very nearly equals that of the girls, and quite a fair proportion are of 10 or 11 years of age. Boys 863; girls 891.

183. *Rev. Gilbert Smith*, Barton St. David (population 404).—Is very strong on subject of bird-keeping; thinks it is bad for little boys being taken off early to go out and stay out in continual wet, and come in late after it.

184. *Rev. George W. Grogan*, vicar of Somerton (population 2,206; the cultivation is "chiefly grazing "cows and feeding sheep; there is a great deal of "dairy-farming, for cheese especially, but not so "much stall-feeding for beasts. This culture does "not employ so many nor pay such good wages as "tillage and fattening beasts with higher farming").—Children are employed from 8 to 9 upwards, cattle tending, driving horses, bird-keeping, and other light jobs. "Very young children are sent out with wag-"gons, boys of 9 or 10 years old, younger than is "allowed elsewhere. Girls are employed in light "field work very young, but not so many as boys, "being employed in gloving at home or in the "factory."

Ten years of age should be the limit for boys "with provision for school-teaching. It would be "impracticable where wages are so low as here, and "the cash payment is only 8*s.* or 9*s.* per week, with "cider and extra allowances in harvest, to exclude "children's aid wholly."

Women are employed "to a very large extent hoe-"ing, besides the usual harvest and meadow work;" many glove, however. "Young females should be "restricted as much as possible, but whether by legal "enactment, or improving the general condition of "the labourer, and enforcing a certain school attend-"ance by landlords and employers, through bringing "public opinion to bear on the question, it is hard to "decide. It must be observed that public opinion "has proved ineffectual, and that high wages, even "the highest, have been found in factory, pottery, "and mine districts only to increase the demand for "early labour, while the parents, though able to "afford the loss, only enforce it more to supply their "wasteful expenses, high wages not being accom-"panied with economy in proportion."

"The children attending the boys' school are only 95 of all ages (a small average for the population). The attendance at the girls' national school (excluding infants), is still smaller in comparison with the population. There are one or two dame's schools, another infant school, and a night school for adults, but the proportion of children from 9 to 12 in school is very small. Indifference and the low condition of the labourer is, I believe, the cause as much as early labour."

"The cottages are not much overcrowded, but poor, very wretchedly supplied with comforts, and forming a real contrast to the Norfolk cottages * * the stone (damp-sweating) floors and bad staircases are cheerless. Some are repairing as they fall out of lease. There are a few allotments, and some have gardens; those in the street have not for the most part, but there is a fair proportion with small plots of ground. It is very hard to obtain correct returns of these particulars, as the employers of such immature labour are the very class less likely to aid in any legislative enactment which might tend to disturb the system."

185. *Mr. Hewitt*, schoolmaster, Somerton.—Some boys leave school at 8, but the instances of their leaving for good at that age are rare; most go for a time, and that generally in the summer; the best attendance is in the winter. The boys generally go at about 10, a few stay later. There are none in the school older than 11. Would like to keep them till 12. Cannot fix anything in their minds if they leave earlier. The boys forget so much. Mentioned a case of two brothers, of whom the elder left and went out to work for 9 or 10 months, then came back, and was found not to know as much as the younger. In the first class there are generally not above one or two labourers' children; they are taken away so early.

There is a small endowment. It is a mixed school, about three-fourths being labourers' children. There are 96 on the books (all boys); 61 is the average attendance, but at the best time of the year 85.

There is a night school; none under 12 in it by rule, as there is no money allowed; but there are some few, for whom Lady Smith pays, the children of labourers, who have been taken from the day school to go out to work. There is one pupil over 50, and about four over 20; the average age is 16 or 17. Average attendance 45; has had as many as 60. It is open two nights a week. Best attendance when it first opens, and dwindles towards Lady-day.

186. *Miss Glover*, schoolmistress, Monteclefe school, Somerton.—Some of the infants are sent by mothers who want somewhere to send them to while they go out to work in the fields; some of the bigger girls are kept at home by such parents to look after the younger ones, while they themselves are out. There are one or two in the school who go out bird-keeping in the summer.

Number of girls on the books - 142
Average attendance - - 86

Have several over 14; most leave to work in the factory at about 12.

187. *Rev. W. Knight*, rector of High Ham (population 1,283).—Many of the cottages at High Ham very bad; there are so many small freeholders in the parish. Land societies do much harm by lending money to people who put up a small house on a small bit of land, and pay a heavy per-centage on the loan, which comes to the same as paying a very high rent for a bad cottage.

188. *Schoolmaster* at High Ham.—Will lose about 40 boys at Lady-day, when potato-setting begins, and they will not come back till Christmas. It is heart-rending work, the boys forget so much. Most boys go out at 9 or 10. A boy of 7 has been driving plough all the week; another of 8 minds sheep. But has more occasion to complain of the gloving; girls of 10, as soon as they can sew, are kept at home to do it.

Number on the books 145.

Average attendance 87 - { 64 over 6 / 23 under 6.

To be examined to-morrow.

When mothers go out to work in the summer a great number of infants come to school. A great many women work out, but as a rule they prefer gloving. Prefers those who work out. Generally a glover is known by being very dressy.

Wages in the parish 8*s.*, and cider and potato garden. Very often in summer a farmer will let one of his men go away to mow in another parish. Money is short, but the people are not really very badly off. Is himself paid a good deal in kind. Many of the people own their own cottages, more so than in any village near.

From October to near Christmas the girls go apple-picking, a very bad time for the school.

189. *Rev. C. S. Grueber*, vicar of Hambridge (population 556).—In this parish a good many women working, perhaps as many as glove; those glove part of the year, and work out the rest; as a rule bear a better character, are tidier, and cottages better kept than those of gloving women. Occupations, threshing, which they do not like, as the dust gets into their eyes, hoeing wheat, potato planting and picking, apple-picking, &c. Get 9*d.* a day. All the girls up to 12 from 8 work in a button-hole establishment, Miss Williams', into which asked me to look; from 30 to 40 work there, and never go to school. Boys go out bird-keeping from 6 upwards; spoil voices for choir, but on the whole stay at school a little longer than the girls. His daughter keeps a night school. Called in at Miss W.'s, not at home. They work for Mr. Cooper, at Ilminster.

Extract from letter from Rev. C. S. Grueber, vicar of Hanbridge.

Hambridge Parsonage,
Curry Rivell, Taunton.

Dear Sir, March 22, 1869.

In answer to your inquiry about the workshop for children, I beg to say that the young person you called upon employs between 40 and 50 children. I believe they work from 8 in the morning till about 8 or 9 in the evening. In the summer I believe they go earlier to work. Some of the children, I believe, are as young as 7 years. I consider it very detrimental that children should go so young; they will be left without any education. I am willing to give every accommodation I can as to hours of attendance at school as may best suit the young person who employs the children. If the system of employing children at 6 or 7 years of age were carried on it would be of little use keeping a school. It was bad enough to take away the elder ones, which itself cleared off almost our first and second classes.

With best thanks,
Yours truly,

R. Boyle, Esq. C. S. Grueber.

191. *Rev. J. Augustus Miller*, vicar of Isle Brewers (population 254; acreage 1,246; cultivation mixed).—Some boys go away before they are 8 years of age, generally at that age both boys and girls; no girls work out habitually; it is a gloving parish. Almost wishes he had an establishment like the Miss Williams', at Hambridge, who are very respectable people, and keep the girls out of mischief. "If young "females are employed in the fields, they should "either be kept at work by themselves, or should "work under the eye of some one whose pre-"sence would be a protection to them." Boys should be allowed to remain at school till at least 10 years of age. Has only 30 in the school, and almost all he can teach the boys is at a night school in his own kitchen, but has no girls at that. The boys who stay longest at school are the sons of dairymen, a system that has arisen from the change of feeling of farmer's wives, who are now above the old dairy work.

Only a few women work out constantly; most take to gloving. Upon the hill, towards Fivehead, will find more female employment; they come out in hay-making and harvest.

"There is also a Sunday school. The school attendance is improving, but there are several who either do not attend or attend very irregularly. For this various reasons might be assigned; the utter indifference of some parents to the welfare of their children, the unwillingness of the parents to send their children clean and tidy, and to take the trouble ever to mend their clothes; the drunken habits of some parents, in consequence of which their children are left very much to themselves; the jealousy of interference on the part of the more ignorant parents, who have no idea of the need of school discipline, and therefore resent the punishment of their children, although they will often themselves half kill them when offended with them."

"Some cottages are very bad. Those attached to the farms are more comfortable, and conveniently situate. In some instances cottages are overcrowded, in consequence of which the tone of morality is low, and no disgrace attaches to the birth of illegitimate children. The supply of water is good; the ventilation a matter of accident. Four years ago the Duchy of Cornwall built two model cottages for labourers, but not a single labourer would become a tenant on account of the necessity of keeping the cottages clean and tidy, the labourers preferring to do as they like in that respect. The cottages are let to respectable widows. Gloving is a great blow to morality, as it keeps the girls at home; they never go out to service."

"The cottage allotments are sufficient, and if they could be let without reference to the character of the occupant they would all be taken."

192. *Rev. Charles Southey*, vicar of Kingsbury Episcopi (population 1,838; cultivation mixed; a good deal of dairy-farming).—Boys work at all times of the year from 5 and 6 years upwards; no girls or women, who are all glovers. "The rate of wages is so low "that to restrict the labour of any able to earn would "be a great hardship, if practicable." Farmers do not want the boys so much, as parents come to ask for work for them, owing to the low state of wages in the parish, 8*s.* or 9*s.* There is a school here with a female teacher, but the children are little better than infants; it is difficult to keep them after 8; the people are indifferent to education. There is a Church Sunday school, and the dissenters have one too; dissent is strong here.

Many of the cottages very bad, many of them being let out on leases for lives, and the poor people being unable to repair them. There is overcrowding and immorality, but not of a very gross kind (no prostitution), chiefly owing to all the girls remaining at home and earning their own living. There is a great want of allotments and gardens. Lord Portman's are the best cottages.

193. *Rev. Charles Leigh Pemberton*, rector of Curry Mallet (population 549).—No girls work out, women only in harvest, and occasionally a little other work. "Boys go to work from 6 years old in some cases, but "they are not all taken so young; they ought not to "go till 10 years old, so as to give them time for "learning to read and write. The school is well "attended on the whole, though often boys are taken "away very young for the farms. The girls are "sometimes taken away to work at gloves; I do not "think there is any other cause of non-attendance." It is a parish school, kept by a mistress.

The cottages are very bad, but well situate, and sufficient in number. Some are overcrowded, "and "evil effects have followed; this is owing to the desire "for increasing small wages by taking in lodgers. "They are well ventilated because they are so de-"lapidated. Most have small gardens attached, and "in addition there is an allotment field, divided "among 46 tenants."

Bridgwater Union.—(I.) Slope of Quantock.

194. *Thomas Oldfrey Broadmead, Esq.*, Enmore Park, Bridgwater, Chairman of the Bridgwater Board of Guardians (population of parish of Enmore 314; acreage 1,112A. 2R. 2P. half arable and half pasture).—No girls are employed in agriculture; women are employed in hay and corn harvest, digging potatoes, pulling turnips, &c. Boys go to work at 12 years of age, and work throughout the year; occasionally they

Somersetshire. — Mr. Boyle. — k.

are employed at 10 for a few weeks bird-keeping. There is a good parish school, and they take advantage of it. Cottages in a fair condition, some new and some old, and not over-crowded; they have large gardens, and good supply of water.

195. *Henry Robertson, Esq.*, agent to Lord Taunton, Over Stowey, Bridgwater.—Lord Taunton owns five parishes.

			A.	R.	P.
Over Stowey, population	613,	acreage	3,647	3	35
Nether Stowey	866	„	—		
Spaxton	1,058	„	3,387	2	9
Charlinch	242	„	1,432	2	9
Asholt	181	„	1,252	1	7

Boys are employed in the five parishes pretty generally at all ages and all times, girls also at all ages in light field-work. There is little regular employment for women, and what there is mostly among the turnips. It would be desirable to prevent boys working in the fields under 12 and girls under 15. In the parishes of Over Stowey, Nether Stowey, and Spaxton are very good schools under Government inspection, and very well attended, nearly every family taking advantage of them; there are small schools also in Charlinch and Asholt.

"The cottages on Lord Taunton's estate are rebuilt, or repaired, as they fall into his hands; they are quite sufficient for the supply of labour, and conveniently situate with respect to the farms. The cottages belonging to the life-holders and squatters in the neighbourhood are rather overcrowded, but cases of immorality are not common. These latter are also badly ventilated, but water is abundant. All the cottages have gardens attached, and in addition those on Lord Taunton's estate have allotments very conveniently situate."

Could show me some dreadful cottages; people who are squatters own their own cottages, and live very large families in one room. Used to live by brooming very much, steal heather on Moor and poles in covers, and sell them in Bridgwater; but gone out very much now as wire is much used; live at place called Castle Hill, about 12 cottages. Most of the children come to school now, and many of the men come to work; but work does not seem to come natural to them. One who came threw down his spade after digging an hour, and said he could not do it. So went back to his old life.

Calculates that building a cottage is so much dead loss; for even if you get 2½ per cent. on the outlay, that is swallowed up in repairs.

Wages about 10*s.* and cider; some give 9*s.* It has been tried to make them give another shilling instead of cider; but the labourers like it. They could not get so much cider elsewhere for a shilling; after all if they had not cider given to them, they would go to the public house, and much better not do that.

196. Lord Taunton's Cottages at Over Stowey. Extract from Diary, Feb. 13, 1869:—

Mr. Robertson took me up to see some of Lord Taunton's cottages lately built. The first pair were from a design of his own (Mr. Robertson's); he makes them a double square, 48 feet by 24. On the ground floor was one very good room, the fire-place adjoining the other house, one window to the front, besides this there was a strip, a little wider than the hall-door, taken off all along the outside and the back of the house. The outside consisted of a small vestibule, nearly square—he thinks it makes it warmer to have it in the house—and a smaller room with copper. Had a door out into the garden at the back. Along the back of the house was a small pantry nearly square and the staircase. Upstairs were three bedrooms, two good-sized, the other too small rather, but would do, one of the women said, to put two boys in. In the kitchen was an oven, and a good cupboard. The floor downstairs was of red tiles, which the people complained is hard to keep clean. Common labourers rather like it, but a higher class complain. The walls are of red stone, which is very plentiful, and a little freestone has been worked in, left over from the house. There is a good deal of sloping roof in the bed-rooms. Calculates the cost at 220*l.* (let at 3*l.*), not including pig-sty and privy, which is out behind at the back of the garden. Mr. R. has come to the conclusion that they are rather too small, and is building some new, 54 by 27, of which the cost will be about 10*l.* more; but they are lucky in having the stone on the spot. The tiles are brown Bridgwater, which he likes better than red. He showed me a second pair, which he had taken from some his father, agent to Lord Bath, had built at Horningsham. More pretence to adornment; a good deal bigger, with another room downstairs, built out at the back for a boiler; the porch outside; three good rooms upstairs, the staircase leading up in the floor of one, which makes it more airy, and they like shutting windows; cost about 250*l.*, besides pig-sty. A better class of cottage, and rather above labourers. He had also pointed and roofed with tile several old cottages, which looked like new.

197. *Rev. J. W. Robinson*, vicar of North Petherton (population 3,950; acreage 10,174).—It is a big overgrown parish, its increase chiefly owing to the railway; but it still depends mainly on agriculture. "Women are employed to a certain extent, but "generally on the farm on which their husbands are "employed; the majority of women do not work in "the fields. Girls are not employed as a rule in "agriculture; it is most desirable to prevent the "employment of females together.

"Boys work out from 9 years old and upwards; bird-keeping in the spring and summer, apple-picking in the autumn; as they get older they get into permanent employ on the farm, either about horses or cattle. I would not let a boy go to work till he has passed his twelfth birthday. There is an infant school, a mixed school, under Government in connection with the Church of England; there is also a British school; in both cases there are Sunday schools. They take advantage of these opportunities until the child can earn anything; home duties interfere with the girls' education.

"The cottages in this parish have improved much during the last 10 years. In most cases they are sufficiently near to the farm; but many live in the village who work at outlying farms. Overcrowding is the exception, water scarce. The majority have gardens; they do not let easily unless they have gardens. There is no allotment system; some farmers underlet land in small plots (⅛ acre) at a large rent for potatoes."

The parish being large many labourers live far from their work, but do not work out of the parish.

198. Letter from *Rev. H. B. Hare*, rector of Fiddington, Bridgwater.

The Rev. H. B. Hare begs to inform Mr. Boyle that the average wages of the agricultural labourer in the parish of Fiddington are from 8*s.*, 9*s.*, to 10*s.* per week; that they pay from 1*s.* to 1*s.* 6*d.* for their cottage; that very few women work in the fields except at turnip-hoeing and the harvest, &c.; and that the boys are set to work as soon as they can earn anything; up to the time they go to work they are at the parish school, and afterwards attend the Sunday school up to the age of 16.

Fiddington Rectory, Bridgwater.

199. Bridgwater Union. (II.) Polden Hill and the Moors.

(N.B.—Polden Hill divides the turbary moor to the North from Sedgmoor to the South, and the hill parishes almost all include some portion of one or other of the moors.)

200. — *Smith, Esq.*, Pawlett, agent to Lord de Mauley.—Nearly all the property he has to manage is grass, and lies on the moor, but has a few hundred acres of arable on the hill. The land is very heavy, and you cannot plough with two horses, so small boys are necessary to lead them. Up the country where the soil is light you can plough with one horse, which the ploughman can drive, so that no boy is necessary. Boys usually begin to drive horses at about 10. No girls work, and in a pasture country there is little work for women; they cut young thistles, which are very abundant and make good food for cattle.

Has only three farms on the estate, which includes most of the Pawlett Hams. Some time ago, when Mr. Smith first came to manage the property on the Scotch system, they got rid of all the small tenants, and divided the farm houses into cottages, which are very large and roomy. In these cottages live the shepherds, who take care of stock, often sent by farmers from 40 miles away to be fattened. Farmers from all over the country come down to the auction, which takes place annually, to take a bit of grazing land, and bid one another up. The best land is about 1,000 acres beside the Parrett, rich alluvial land, just sufficiently raised over the river to escape being flooded.

Wages given to the shepherds and herdsmen 12*s.* a week; the usual thing given by the farmers is 10*s.* and cider; some give as low as 9*s.* and cider. No cottage given.

201. — *Jeffery*, yeoman, Huntspill. — Farms his own land, which is mostly pasture and dairy, so there is not much employment for women and boys. Women cut thistles for the cattle, clean the pasture, get rid of dung, &c.

Gives 10*s.* a week wages and cider; perquisites, such as garden, and lets potato ground.

202. *Mr. Biddicombe*, Shapwick, occupier. — Women are not employed in the fields as much as they used to be; only employs two himself; they are both labourers' wives, who come on a job now and then. They dress ground, plant beans, pick apples, &c. Do not work much except in summer, and a little in autumn among the mangolds. Many of the boys begin work at 7 or 8 years of age, keeping birds; at 10 they drive plough, and take regular work; while younger they come to school most of the year, or have ample opportunities of doing so.

The great employment here for all ages and sexes is digging turf; at this a man can get in the summer 2*s.* 6*d.* a day and liquor; one man takes an acre or two, and hires others to assist him in cutting the turf, which is carted round and sold in the neighbourhood. The pay is so good that it takes away many men, and it would be difficult sometimes to get labour, were it not that the introduction of machinery had made fewer labourers necessary.

Cottages are not much on the farms; has none on his; but it is near the village, and it is no hardship for people to live in the village, and go out to work. Wages 9*s.*, and half a gallon of cider daily. Prefers giving piecework, and the men like it too, but there is none to be given in winter. Employs two boys, one of whom is under 10; he drives plough, which is necessary here as the soil is heavy.

203. *John Sherran*, occupier, Shapwick.—Only employs one woman himself, threshing, apple-picking, &c. There is no other employment for women, so if they want to work must work out in the fields. There are only four girls employed in the fields, aged about 18 or 20; they work just like the married women; and are no worse characters than any of the others. It is an exceptional case for girls to work; most go out to service.

204. *Simon Hayes*, turf-farmer, Shapwick (a tenant of Mr. Strangways, living in a small house built on the turbary moor).—Children begin working in the turf as soon as they can keep birds or do anything; there is a variety of work to be done, some of which is very hard, and employs men, some easily done, which employs women and children. Men cut out the blocks about a foot square, wheel it away, and put it down; boys slit the squares into three or four flat pieces, and then they are left a fortnight to dry. When they are dried, women and children put them up in heaps locally called "hiles," 14 turfs going to a hile. It is a loose kind of heap; seven below and seven above, built up like a card house, so that wind and sun can get in and out and dry the turfs. When they are dry they are put up in a "ruckle," which is shaped much like a sugar loaf, 40 hiles going to a ruckle; if the weather is wet the women come and turn the turfs between the "hiling" and "ruckling," if it is dry that is not necessary. They are left in the ruckles till required to be carried off, and sold in cart-loads; more than three and not four ruckles go to a one-horse cart, 10 to a waggon.

14 turfs make a hile.
560 turfs or 40 hiles make a ruckle.
5,600 turfs, 400 hiles, or 10 ruckles, make a waggon load.

Loading is done by men and boys.

The first job, the cutting, is let to a man, and then the hiling and ruckling to a woman and her children. Some men earn 3*s.* a day at this work; they are usually paid by the day, but sometimes by "covering "an acre," as it is called. Their average pay is 2*s.* 9*d.*, and a gallon of cider. They will not come under half-a-crown a day, and a gallon of cider. Women make 1*s.* a day, and boys 8*d.* Some boys, if good hands, if working by job-work, can make as much as a man.

Nearly all the women work, unless they have a lot of children. It agrees very well with them, they eat a deal more victuals than ever they bring out with them.

The best turf is the blackest; some is quite a light colour. The best black turf sells for 18*s.* a three-horse waggon load in winter, and 12*s.* in summer. The difference is owing to the badness of the roads, which are very soft in winter, so that you have to "bulk the turf up," *i.e.* carry it out in small quantities, and load the waggon outside the moor.

(N.B.—T. Strangways, Esq., to whom I am indebted for being taken to visit Simon Hayes, informed me that he grows some fair wheat on the moor, and that potatoes do very well. This he has managed by employing a man with a horse and cart for the last 30 years to bring down loads of earth from the hill, and mix them with the peat. It is a very paying business both for himself and Simon Hayes; but this success is chiefly due to the railway having been brought right through the centre of the moor, the difficulty of carrying peat being what usually prevents turf-digging from paying.)

205. Cottages at Edington Burtle.

Miserable place, all in the middle of the turf swamp. (1.) Best cottage, a Mrs. Cox, old lady in a wig, where schoolmaster resided, but had been built for the sexton. (2.) Close by a mere hovel with open thatch, and two very small windows, now a stable, where till two years ago, when he died, lived an old farm labourer; chimney corner at one end, at the other was a curtain across to screen his bed. (3.) Visited another good cottage close by; sitting-room and store-room down stairs, and one bed-room; two bed-rooms up. In it live an old man and wife, married son and wife with three children, and one son unmarried.

(4.) *Mrs. Simmons.*—Two rooms upstairs, and 10 persons in the cottage; holds under Mrs. Cox. Has eight children, two big boys 20 and 22, the next 15. Oldest girl 9, the rest smaller.

(5.) *John Holly.*—Lives in half an old dilapidated cottage on the moor, which looked as if it had once been good. Water comes up to the door in floods, and we had to jump two peat ditches to get there; they have a plank, but that had been removed. It has only two rooms, one above and one below; in it live a father, mother, two big sons, older than the eldest daughter, who is 19. She went to service, and

Somersetshire.
Mr. Boyle.
k.

came back with a child; she has just gone out again to a farmer's family. There are 10 in the house altogether. The mother was out at work; a girl of 9 was kept at home to look after the baby; she comes to Sunday school. They are turf-people.

(6.) *George Cox and wife.*—Lived in a smaller half of the same cottage; four girls at home.

(7.) *Richard Combes.*—Has three boys at home, of whom the eldest is aged 15; two girls, eldest 13; only one room, divided by a partition and a blanket; very ruinous, rough paved stone floor, thatched, with light visible through one place, built of a hard sand, in a ridge of which in the peat the village is built. Leaning forward and nearly tumbling down, kept together by laths. Belongs to Mr. Henniker, but falls in at Lady-day, rent 1*l.* 1*s.* per annum; will probably then be pulled down. Combes himself can read but none of the others, who never come to school; he reads gossiping paper to them over fire on Sunday evening. A wild rough looking little girl, hardly clothed, showed us the cottage.

N.B.—Most of these people on the Moor come into the village in the winter, when the houses are flooded. They live mainly by going "turfing;" will take perhaps half an acre, and husband cut, wife and boys hiling and loading. Then in the winter when money wanted will take a load and go round to sell it at Highbridge, Glastonbury, or elsewhere. A bit of peat bog lets at perhaps 50*l.* for eight years, in which time it is cleared of turf, and becomes only useful for pasture for inferior stock. Men employed as delvers get as much as 18*s.* a week; it is very hard work, as they have to cut it and lift it up to a higher level.

206. Cottages at Bawdrip.

(1.) *Mrs. Clist.*—Bad cottage, thatched, rough stone floor; under Mr. Allen, rent 2*s.* a week; has two rooms below, two above. Husband a carter, and gets 10*s.* a week, the other men get 9*s.* Has seven children; the eldest boy is out at work, not quite 10 years of age; gets 2*s.* a week.

(2.) *Mrs. Sellick.*—Reckoned the best cottage in the village, two rooms above, two below (there are none in the village with three bedrooms); tidy, but rooms very small. Rent 4*l.* per week, and pays rates and taxes. Has seven children, all girls but one, a little boy. Eldest girl at home aged 13. Husband is a labourer; gets 10*s.* a week, which is all the money that comes in.

(3.) *H. Moore.*—Had one of a row of five cottages; small sitting-room downstairs, and very small back-room with not much window, and badly ventilated; two rooms upstairs, but one very small, into which the staircase opened. Paid for it 4*l.* to Mr. Greenhill. Very wretched cottage; but the occupier is making 16*s.* a week, as a sort of under-strapper to Mr. Greenhill. Has eight children at home, and two away in service. The eldest girl at home is about 8 or 9 years old. The two biggest boys sleep downstairs in the back room, the rest upstairs, three or four little ones sleep in one big bed.

207. *Mr. Johnson*, station master, Athelney.—Takes some withy beds of the company, but generally buys his withies, and sends up the country 400*l.* worth in the course of a year. They are cut in December and January, and put in ditches to soak till they grow out; peeling begins about April, when the sap has got up into the bark, of which the growing out is a sign, then they peel easier. They are given in bundles to the poor people, women and children, to peel; they receive 4*d.* a bundle for peeling, and a women with a child to help her can sometimes earn 2*s.* a day; the woman draws each withy through an instrument called a "break," which splits the bark, and then it is easy for a child to pull the bark off. When peeled it is put out in the sun to dry, and when dried is ready for sale. A bundle is two feet in circumference.

Most of the beds belong to the poor people themselves, who have holdings of a few acres. Very few farmers have any; the company has some along-side the railway. The cottages on the road from Borough Bridge to Athelney that look so wretched are held on lives from the Dean and Chapter of Wells; they are very low, mostly one story, but have good gardens.

(N.B.—Much of this country is below the level of the river Parrett, which is banked up to prevent floods.)

208. *Rev. W. C. Lake*, rector of Huntspill (population 1,017).—This is a large parish, and contains a good many small holdings, in the cultivation of which the whole family of the occupier assist. The people as a rule are very well off; wages 10*s.* a week and cider; there is a good deal of piecework too, and many labourers work entirely by the piece, such men getting 2*s.* a day. The railway and the brick-kilns keep up the wages in this neighbourhood. Many of the people have got on so well that they have been able to put by a little money till they have gradually become rich enough to rent a bit of land, and keep a cow; such men have generally very saving habits, and have left as much as 2,000*l.*; they are not likely to subscribe to the school. Cottage rent high, about 2*s.*

Reckons Huntspill a tolerably moral place, most of the women are married in the family-way, but there is very little of worse forms. A great drawback is the cider houses, unlicensed; the police cannot stop the sale of cider, unless they catch the seller in the very act. Cider is very cheap, and there is consequently much drunkenness.

209. *Rev. J. D. Macaulay*, vicar of Highbridge (population 762).—A village that has increased much with the railway, depending very much on the railway works; but there is a considerable agricultural population too, about 400, which existed before the railway came. The cottages are generally on the farms. Wages 10*s.* 6*d.* and cider, cottage rent as high as 2*s.* 6*d.*

210. *Rev. J. Oland Crosse*, vicar of Pawlett (population 580; acreage 3,000, pastoral; includes the Pawlett Hams).—Women only work in assisting their husbands occasionally, "at cracking stones," but not commonly. They sometimes take "thistle cutting," and "right "lawn," *i.e.* clean the grass. Girls work "merely "as gleaners, in apple picking, and potato digging," from 9 years old upwards. Does not see that any restriction is necessary, but it is much wanted in the brick yards, where children of 6 and 7 work bare-footed in the clay. "Does this come under the "Workshops Act?"

Boys begin bird-keeping at about 7, driving plough at about 12. Would like them not to work under 12, but it is "a very difficult question." It is a question between what is good for the mind and what for the body; would wish to combine as far as possible making them gentle and sturdy too. There is a day school with an average attendance of about 50, also a night school in the winter, and a dissenting school, at which, however, Mr. Crosse gives books, and the catechism is taught; only about 12 or 13 children.

Cottages good and sufficient, with two or three exceptions not overcrowded; gardens attached.

211. *Rev. Alfred Bull*, vicar of Woollavington (Woollavington, population about 400, cultivation pastoral; Puriton, population about 600, cultivation more mixed.—Almost entirely pastoral on the *level*, as the reclaimed moor is called, on the hill more arable).

"Women pull turnips, mangolds, &c., plant beans, "hoe wheat and other crops;" girls do little out-door work, "with the exception of general farm "work." I think girls should not be allowed to work in the fields under 13, better not at all, as it has a tendency to corrupt their morals, and to unfit them for domestic duties and service.

"Boys work at all times, and sometimes as young as 7, keeping sheep (as the land in the level is divided by ditches, which are sometimes destitute of water),

and they are employed generally about the farms, and sometimes in driving the horses at plough, planting potatoes, beans, &c. I should say that 10 years old is quite soon enough for them to begin regular work."

At Puriton, a good schoolhouse and buildings, recently erected, with an endowment of about 20*l.*, also recently recovered. But the new code has inflicted a serious loss on the efficiency of the school, and made it impossible to employ a master. I have, as yet, been unable to establish a school at Woollavington, but supported one for seven years entirely at my own charge. There is a building well adapted for the purpose, which both the Poor Law Commissioners and Charity Commissioners have sanctioned being so applied.

It is impossible to prevent the children deserting the school frequently during the year for the purpose of field work, so as to hinder the advantages they would otherwise receive, and retard those that are more regular. A large majority of the parishioners at Woollavington were prepared to vote in vestry for the appropriation of the old house standing in the churchyard for the purpose of a school; but one or two of the inhabitants hindered by threats of deprivation, of work, and other assistance. This opposition has, I believe, passed away through circumstances, such as the death of several of the farmers who objected, because they wanted to sell the house, which I prevented on the score of its being on the glebe, and in other ways.

At Puriton the cottages are insufficient and in a bad condition, overcrowded too, from which much evil has resulted. "Very badly ventilated indeed. In some "cases the windows will not open at all in any of the "rooms, and there is frequently only one bed-room, in "which large families are brought up.

211. *Rev. E. C. Coney*, vicar of Burtle (population 250; cultivation almost entirely pastoral).—There is a large tract of peat land, on which the people are chiefly employed, the men in digging, the women and children in drying the turf. The work lasts from April to August, and almost all the little boys and girls from 8 and 9 years upwards go out to such work, as well as the women. Few boys are employed in farm work, and they from 13 years upwards, no girls. "I consider the employment of girls in the turf "fields is most demoralizing."

"The cottages are with few exceptions very bad; they are sufficient under ordinary circumstances. In the winter the lowlands are flooded, and then cottages above high-water mark are indecently overcrowded; the state of morality is low. Plenty of water; no ventilation. All have not gardens, but most of the cottagers can and do rent (at a high rate) potato ground.

"There is a day school under a fairly competent master, and a Sunday school. In the four turfing months the school is deserted except by some 20 or 30 infants, brought by mothers who go out to work. The rest of the year it is well attended, and Mr. Coney has a very successful night school, to which men will actually come by boat in the winter. Looks upon turfing as most demoralizing; boys and girls get out together, and a deal of harm done; fortunately now gets a good many girls out to service at Weston, where is a regular colony, but there are four or five about the village. A good deal of overcrowding, especially in winter, when relatives, who have intermarried, come off the moor to stop at houses in the village, while their own are flooded. Quite the exception for a woman to marry pure, even in the class immediately above the labourers. A very out of the way place; no resident squire, and no resident parson, till Mr. Coney came down about six months ago to the uninviting spot, having previously lived at Chilton.

"The establishment of a dairy in this county (not six ploughed fields in parish) will consist of three men, a farm girl, and two or three boys; perhaps five pails will go out milking. Men are generally engaged extra on Lady-day, though little work so soon, to secure their presence at mowing. The system of dairymen is followed by some farmers who have farms on the hill, and a bit of land here, which they let with cows to dairymen. A good many small farmers with three to five cows.

212. *Rev. Giles Pugh*, vicar of Shapwick (Shapwick, population 404; acreage 2,292. Ashcott, population 817; arable and pasture; cheese the chief article of sale.)—Boys work from 8 years old; they ought not to work before 10, even at bird-keeping, which is always their first employment.

"Girls are occasionally employed in stone-picking, and other light work, but to no great extent for the farmers, except in picking up apples and potatoes at the time of in-gathering. Of women I may say the same. Both women and girls are more extensively, indeed very generally, employed with their own families in the turf moors of Shapwick and Ashcott alike, many of the men of the labouring class being engaged in cutting turf on their own account, or with or for partners or helpers. Out-door work, especially in the turf moors, has, I am convinced, had a very demoralizing and hardening effect on females in these parishes, especially in Ashcott, where those resident on the moor two miles from the parishes are very uneducated and uncivilized as well as irreligious.

"There is a school for boys and girls at Shapwick, conducted by a mistress, the parish being small; a larger and better school at Ashcott, with a master and mistress. There is also an infant school at Ashcott. The provision is sufficient for the wants of each parish. Early labour takes away the boys, and some parents are too careless and too ignorant to avail themselves of the schools, but they are on the whole well attended, especially in the winter, when children's labour is not required."

In Shapwick there are scarcely enough cottages, but the gardens are good; in Ashcott the supply of cottages is ample, the gardens deficient. "The men are "occupied in the turf moor during spring and summer, "and go from home *guttering* in the winter, which is "bad for themselves, and for their families, serious "evils arising from the separation."

Like the cottages of most other villages they are small and overcrowded, according to my views, and those now beginning to prevail; but still the occupants take in lodgers, whenever they can get them, and crowd them more. I cannot say whether immorality has arisen particularly from this cause, but there is a *low tone* prevalent, especially in Ashcott.

From 43 years' experience in towns and villages, I gather that the overcrowding and deficiency of ventilation, and cleanliness, from want of space and water, is greater in towns than villages.

213. *Rev. J. Warren*, rector of Bawdrip (population 450; acreage 1,826; cultivation mixed).—Boys work in the parish generally from 9 years of age. Girls rarely. Some 20 women in ordinary field-work, during spring, summer, and autumn; they work out a good deal in summer. Men are employed to turn the cheeses; it is too hard work for women. There are two schools in the parish, one in connection with the National Society, with a master and mistress, and a dame's school; attendance at both fair; average joint attendance 45. Three-fourths of the cottages very inferior, and in many cases overcrowded, but evil results rare. Every cottage has a garden or allotment, many both.

214. *Rev. George Oakman Mullens*, rector of Chedzoy (population 455; acreage 1,600). — The parishes in this low ground have no resident squires, and so the people are not well taken care of. They are employed more or less all the year, but chiefly in spring and autumn. Girls work from 12 to 13 years of age. In potato-time, both setting and picking, nearly everybody, man, woman, and child, turns out to work. About 15 married women work out on an average, but at certain times many more. No girl under 15 should be employed in the fields, or boy under 11 or 12.

Somersetshire.
Mr. Boyle.
k.

"A school is provided at the charge of 1*d.* or 2*d.* "each child (according to age) per week, and an open "school on Sunday. It is impossible, however, to "keep them well at school, owing principally to the "great apathy of the parents, who do not see the "good of it. If remonstrated with, they say, "'O, we'll send Bill next week.' But next week "comes, and no Bill."

The cottages are mostly bad, poor, and overcrowded, few having more than two sleeping rooms, many only one. They are, however, improving; they used to belong to the University of Oxford, but many of the occupiers have now borrowed money at 6 per cent. to buy the cottage they live in. The overcrowding no doubt "tends to immorality." Girls do not go to service much, but stay about, and yet morals are not very bad, perhaps one illegitimate child a year. It is very bad for girls going out to work, they get about with the men, and learn to say things that they hardly understand the meaning of at first.

215. *Rev. E. Huxtable*, vicar of Weston Zoyland (population 894; acreage 2,661; cultivation about three-fourths pastoral, the rest arable, a considerable proportion of which is in potatoes).—"Boys are em- "ployed from 8 years old, from April to November." [N.B.—I suppose *employed* means *employed on hire.* It is right to observe that the parish is broken up into a great number of holdings, very many of which are very small, so that the children are very much employed by their own parents; the girls and young women (*e.g.*) do the milking, the mothers the dairy work.] "The girls are a good many of them employed "during August, September, October, and November "either in leasing or in picking up apples or potatoes, "or in setting potatoes for their parents, or in many "cases in the apple or potato crops for hire, from "about 10 years of age." Women, besides haymaking, in picking up and sorting potatoes. "I should like to "limit the hiring of boys to three days of the week, "requiring their employer to have a certificate from "the schoolmaster of the child having attended "school the other three days, up to 12 years of age.

"There is a good National school under government inspection; 100 scholars, winter. In winter there is also a night school; 30 or 40 attendance. From May to November inclusive attendance at the day school is slack, especially from August to November, in part owing to the indifference which many parents, themselves uneducated, feel to their children being educated.

"Condition of the cottages generally pretty good "with a proportion of cob." None attached to farms, all by the roads or in the street; not overcrowded, several vacant. Few gardens and no allotments, "though in some cases farmers will let an acre or "half an acre for potatoes at about 10*l.* an acre."

216. *Rev. H. Wood*, vicar of E. Lyng and Borough-bridge (population 319).—A very poor place with no resident squire; most of the parish lies beneath the level of the river Parrett, which is banked up; own home five feet below high water mark. Withy-peeling gives a good deal of work for women and children; a child can do it at 5 years of age; price, 4*d.* a bundle peeling, and a women often peels two bundles a day. Wages low, from 7*s.* to 9*s.*, and have to find a cottage.

217. *Rev. Henry Roberts*, vicar of Othery (population 698; acreage 1,820; cultivation chiefly pastoral).—Boys work from 8 to 10 upwards all through the year; would like them not to begin earlier than 10, if they go to school. Girls are not generally employed, women not much except in haymaking and harvest.

There is a Church day school and Sunday school; also a night school during four winter months; the congregational dissenters have also day and Sunday schools. "The girls generally attend the schools; "boys are prevented to some extent by early "labour;" in some instances the parents are indifferent.

"The cottages in many instances are the labourers' own property; such are often small, and not well kept up; some are held on lives under the lord of the manor, at a nominal rent; others are rented at a very low rate. There is no want of water. I cannot trace cases of immorality to the state of the cottages, though I think it desirable that every cottage should have a sufficient number of separate apartments. Most of the cottages have gardens.

(N.B.—"The last four parishes above are situate on islands in Sedgemoor.")

Axbridge Union.

218. *Rev. G. G. Beadon*, rector of Axbridge, and *Mr. Collings*, occupier, met me at the Town Hall, Axbridge, July 18, 1868.—The parish of Axbridge itself is small, and chiefly pastoral; the population a little under 900, chiefly living in the town. It has a feature of its own common also to the two adjoining parishes of Cheddar and Compton, the market gardens, which are situate on the slope of the cliff facing south, and where a large quantity of early peas and potatoes are grown. Potato and pea picking gives a great deal of employment to women and boys. Boys go also bird-keeping, beginning at from 8 to 10. Mr. Collings had a boy of 7 keeping birds for him for three weeks. Girls work very seldom, women a great deal. Mr. Collings has seen 15 to 20 working together, picking peas and potatoes at so much a day. They only work at times, seldom in the winter; perhaps sometimes pulling mangold and turnips. Perhaps 30 or 40 from the parish go, principally to work in neighbouring parishes. They work, as a rule, as long as the men; sometimes, however, do not begin till 8, but it depends. At a pressing time, such as pea-picking, they work 12 or 13 hours a day; for that they get extra pay. Usual pay 1*s.* a day and a quart of liquor. The language is very bad. Among dairies men and women get together too much, and that leads to bad results. Neither gentleman would restrict female labour. As to boys there are not enough of them for the work, but Mr. Collings would like to see more at school. There are enough schools, and no children who do not go to some one or other.

The cottages are not uniformly what they should be, but there is little crowding, except just at present during the railway works; there are a good many navvies lodging in the cottages.

219. *Woman at Axbridge.*—Work most of year for Mr. Henry Durston, picking potatoes, picking peas for a market garden; hoe mangold and turnips, or cut turnips, about three days a week all the year.

Works from 6 to 6. No over-work lately, as peas and potatoes are not so plentiful as usual this year.

Wages 1*s.* a day and pint of cider.

From 10 to 12 women go to Mr. Durston, perhaps 40 or 50 or more work out altogether in the town; eight or 10 go as often as me. The rest do not do so much out-door work.

(Kidney beans have failed this year. Used to be acres and acres.)

Long hours of work in wet have injured her health. Other people complain of the same.

Would rather work in the field than bide at home.

Many children are neglected because their mothers go out to work. Hers are not, she sent them to school.

220. *John Yatman, Esq.*, Winscombe (population 1,326; acreage 3,900).—The cultivation is chiefly pastoral and orchard, with a good deal of garden farming here called "cropping," *i.e.*, peas, potatoes, roots for Bristol market.

Women are employed "very greatly," as well as children and young persons of both sexes from 8 years old upwards, in pea-picking, potato-setting, apple-picking, weeding, and children in bird-keeping too. The hours of work are very irregular. In the "cropped" lands they are often up at 4 a.m. and work till 10 at night. "Certainly no girls ought "ever to be employed in agriculture, except perhaps

" in harvest." Boys' labour also should be restricted. " I would compel every farmer to have two boys, " as well as I do, and send them three days to " school."

School pretty well attended. There are Church and dissenting schools. Three schools in the five hamlets.

" The cottages, as usual in the West of England or in agricultural counties, are infamous, and are badly supplied with water. Most have good gardens, none allotments, that I know of, except mine, for which some of them pay gladly at the rate of 3*l.* an acre, and grow crops of wheat and potatoes alternately."

221. *Rev. J. N. Garland,* rector of Shipham (cultivation mixed; much more arable than in the valley; population 520; acreage 766).—A very bleak, cold place, and out of the general track. People live on potatoes and wheat bread, and it is a wonder how they manage to get on as they do. Yet some of the families that are best off do not seem so, owing to a defect in management. Last year the potatoes failed, and there was great distress. Wages from 10*s.* to 12*s.* There are many farmers who farm only from two to three acres, and of course boys go out working with them. They begin at 10 years, and work all the year round. " Girls occasionally, but at an age " senior to the boys, picking out weeds, cutting " turnips, setting potatoes, and other light work. " Women work occasionally in summer and autumn. " About one-seventh of the entire number are em- " ployed." Light work, weeding and cutting thistles. They must do it, as wages are so low. Boys should not work under 12. To restrict female labour is " desirable, but difficult in a poor parish like this."

" There is a daily National school for both boys and girls; 50 to 60 average attendance. Many do not take advantage of the school from the carelessness of the parents, who, not having had the advantage of education themselves, care not to have it for their children."

Cottage accommodation is bad, as it always is where there is no great proprietor. There is crowding " in " some few cases, but no evil result has come under " the notice of the enquirer during a residence of " three years. Some have small gardens, some small " allotments of a quarter to half an acre within easy " reach."

222. *Rev. W. H. Cartwright,* vicar of Butcombe (population 230; acreage 999; cultivation mixed, grain and roots, with occasionally a field of teasles; a large proportion of the parish,however,is pasture land).—Very much out of the way, and a very neglected parish. It belongs to many landowners, none of whom are resident. A good many Bristol people among them, who having made money like to invest it in land, and often give a good deal more for it than it is worth. Mr. Cartwright mentioned a case of 19 acres of very poor land not worth 15*s.* an acre per annum, selling for 950*l.* Consequently there is no one to take any interest in the property. It is let too in very small holdings, the consequence of which is, that there is no capital, and the farmers cannot afford to keep in order any cottage they possess.

" Women are not employed in the fields to any " great extent, and then usually at haymaking and " potato-dropping or picking-up." They prefer gossiping about the town. Girls are not employed, " that I am aware of." Boys work as soon as they can earn anything. Bird-keeping is generally one of their first employments, dropping potatoes at planting time, and picking them up at digging. They should work " certainly not earlier than 13 years, " and the labour should be of a kind suited to the " constitution of the child. One year at school after " that age will in most instances be of greater benefit " to the child than five previous ones, both as respects " moral training and bodily health.

" We have a good school under a mistress. Early labour is one great hindrance to its being as useful as it might be. If a penny can be earned in any way by a child, it is always kept away from school, so that not only is the child taken away from school permanently, but its attendance while there is very irregular."

The cottages " are very bad in general, neither " supplied with water, nor drained, nor ventilated. " Seldom more than one sleeping-room for father, " mother, children of both sexes, and sometimes a " lodger. As a rule they are very wretched, and " fertile causes of disease and immorality. A few of " the cottages have gardens. There are no allot- " ments. The farmers often let plots of land to the " labourer."

223. Visit to cottages at Butcombe. Extract from Diary, July 11, 1868:—

Mr. Cartwright is now restoring the church, and building a cottage for the schoolmistress. He built the school (at present there is no mistress temporarily, which accounted for the number of dirty children I saw running about), and seven cottages, which were infamous, he pulled down. He bought two semi-detached cottages near the rectory, and is now throwing them into one. He took me down to see some of the cottages. Mrs. Clarke has seven children (carpenter's wife) in two downstair rooms and two bedrooms; there is a lodger too, an unmarried labourer. A few doors off was a small shop, in which were 10 children in two bedrooms. These were favourable specimens, but we saw another thatched cottage in which lived a man and wife and five children in one room. There were holes in the roof. In winter they have to move the bed about to escape the rain. For this he pays 50*s.* a year to a Bristol man. I asked Mr. C. if he could not have got a better home for the money. It appears that he could, but the people are so listless they do not care. His name is also Clarke, a very common name here. It appears they intermarry very much, to which is much attributed physical inferiority, as also to their living so much on nothing but wheaten bread. He was one of a family of 14, who used to live like rabbits, scarcely dressed, and if any one came into the village, scurry away like rabbits to hide their nakedness. Mr. C. had got up a clothing club, since which they have dressed better, but even now they are sensibly inferior in personal neatness to the neighbouring population.

Yet he does not consider the morals lower than most of the neighbourhood. There is only one case in the parish of a married man living with another man's wife, and this woman was so barefaced that at a distribution of blankets, when purposely omitted, she came to ask the reason why. A young farmer had three children by a girl, but married her after at Bristol. There are some who marry just before a child is to be born, but it is the exception. (Of course they learn immodesty in the cottages, but it does not seem necessarily to lead to a lower state of morality.) Mr. Cartwright's impression is that the adults are hopeless, that the only chance of getting an improvement is by working on the rising generation. The boys are not taken from school till 10 or 12 years of age, but it is from 14 to 20 that he hopes to make his impression. He thinks this is only to be done by getting personal influence over them, and the way he hopes to get it is by not only establishing a night school, but by getting influence over one or two young men, and through this influence getting it over the other young men in the parish.

224. *Rev. Wm. Hunt,* vicar of Congresbury (population 1,258; acreage, 4,429a. 1r. 12p.; cultivation pastoral; farms, grazing and dairy).—About 50 boys in the parish are employed in the fields, but very few under 12 years of age. There are boys here who have never been to school, but that is their own or their parents' fault. " Distance does not affect the " school attendance, except in bad weather. The " actual school payment does not keep any away. " But the poor send their boys to farms and their " girls to service far too early, on account of their " poverty, and no wonder."

Somersetshire.

Mr. Boyle.

k.

	Boys.	Girls.	Total.
On the books - -	25	36	61
Average attendance -	21	29	50

"Sewing is taught every afternoon except Saturdays."

No women are regularly employed on the land, "but very many are employed as dairy and farm "servants. Their work is really in the farm yard, "and I think that the lifting heavy pails, &c. affects "the health injuriously, and I have observed that "there are several cases of disease (*e.g.*, ruptures, "&c.) from this cause.

"Hardly any cottages have three bed-rooms, and "I do not consider that two are sufficient for large "families. They are mostly with three rooms, the "two bedrooms often small; ventilation, on the "whole, good; accommodation insufficient for decency. The number crowded together in a bed-"room is most debasing, some young women over "13 and up to as old as 22 sleep in the same bed-"room with mother and father. In some extreme "cases worse arrangements are made. Modesty is "destroyed and the whole tone of the mind lowered. "I am sure much depravity exists from this source. "In cases of sickness and death this is especially detrimental to health and comfort, but at the best of "times it is much to be resisted, if possible. Many "are in the hands of Bristol charity trustees;" their cottages are well kept. The rest in the hands of small owners, sometimes of the poorest class above paupers. In consequence no repairs are done, no improvements made, and the cottages so bad that they are only inhabited by the worst characters, and quickly fall to pieces. Rent for a three-roomed cottage 4*l.* to 5*l.*

With respect to the application of the Factory Act to school attendance in agricultural parishes, half-day system, or alternate day, would not do for the work.

The Printworks Act would make any systematic arrangement of lessons so as to benefit the children very hard. I should strongly recommend a combination of the half-day system and the Printworks Act, "by school attendance so many half days in the six "months," to be greater in case of girls, and to include a good proportion of afternoons to be spent by those above 6 in learning to sew."

225. *Rev. J. B. Archer*, vicar of Churchill (population 806).—Complains much about bird-keeping, but his chief remarks on the subject of cottages. At Stock Lane, close by, there are some wretched cottages, which depend for water entirely on the brook into which their sewerage falls. Sometimes a flood comes off Mendip and scours it, but at present it is filthy. They do not believe when fever comes in it being their own fault, but look upon it as the hand of God.

226. *Rev. R. Lawrence*, Bleadon rectory (population 630; acreage 2,745, chiefly pastoral, under 300 acres of arable.)—Girls not employed, women hardly at all; boys from the age of 10 years. "There "is a National school, but many children are prevented "attending by their parents requiring their services "at home, and they come therefore irregularly. Few "boys remain after 10 years of age, being then "required for agricultural labour."

Cottages tolerable, and not much overcrowded; nearly all in the village, few on the farms; badly supplied with water; "the supply being chiefly from "a parish well at some distance from many of the "habitations." Ventilation poor. Gardens few, and mostly small, but some tolerable; there are allotments, of which many take advantage.

227. *Rev. Frederic Du Sautoy*, vicar of Mark, (population 1,217; acreage 4,495; chiefly pastoral.)

Employed in the parish in agricultural labour.

	Under 8.	8 to 10.	10 to 13.	13 to 18.	Total.
Boys -	10	10	20	30	70
Girls -	—	—	10	20	30

Women over 18.	
Married.	Unmarried.
Wives of Farmers.	Daughters of Farmers.
50	50

The usual employment of both sexes is dairy work, and hay and corn harvest. Children work eight hours. Adults about four hours daily, milking (milking in wet weather is bad for the health); adults about 12 hours daily, agricultural labour.

No need to restrict female labour; would have no boys labour under 14, or would make them do half-day work up to 14.

Few cottages have more than two bed rooms, but ventilation and drainage are much improved. Rent moderate, water supply bad, "arising from the absence "of springs in the alluvial soil; the water used is for "the most part from the rhines and pits."

Approximate Number of children of the labouring class in the school at Mark.

On register of the school.

Winter - -	29	15	44	14	10	24

There are very few children neither at school nor at work; about 50 males and as many females growing up imperfectly educated. There is no night school, the distance the boys would have to come, making it impossible to maintain one. The school-room not being central, also materially affects the attendance at the day school, in a parish 15 miles in circumference. "The dames' schools also seriously "affect the attendance, and seem to require some "supervision; perhaps a certificated licence might "do good. The girls are taught sewing, knitting, "&c."

228. *Rev. J. Kempthorne*, vicar of Wedmore district, 12 hamlets.

Wedmore population	-	2,300
Theale „	-	800
Blackford „	-	600
		3,700

Acreage 10,000)—A very large parish, and one of chiefly dairy farms, which vary in size from a small one managed by a farmer and his wife, to one that employs two or three women milking, and boys driving the cows. A few boys are taken early to keep crows, but there is little corn grown; they pick apples also, as it is a cider district. Is against compulsory education, thinks it would never answer.

There are about 100 children on the school books, average attendance, 48. Irregular attendance is much to be deplored. "There is no great appreciation of the benefits of a good education on the part "of the farmers and labourers."

"Fresh and better cottages are being built. I wish the Prince Consort's plan of a greater number of rooms would be adopted."

WELLS UNION.

229. *Henry Davis, Esq.*, Oakhill farms about 1,000 acres (on Mendip), independent of 300 acres of plantation.—Employs one boy under 10 and over 8; four between 10 and 13 years of age; 10 between 13 and 18; total under 18, 15. Employs no girls under 18; none unmarried over 18, and three married women; they are employed in picking stones, hacking thistles, keeping birds, and other work; most live on the farm, but some about a mile away. No treatment that is injurious, nor is any restriction necessary on the labour of women or boys. "Parents "with large families would suffer greatly were their "children prevented from working. No rule of the "above kind (Factory Act, &c.) need be made for "this neighbourhood; the children at idle time may "go to school, but farmers could not employ them "were they to come and go as suggested above."

229. (*a*). *Edward Hobbs*, bailiff to H. Davis, Esq. Greenore farm.—Mr. Davis farms 1,400 acres, mostly arable. Used to be the biggest farm in the West, till last returns. Hardly any cottages on it, which is the worst of it, so some of the people have to come five miles; comes himself five miles. Very bleak and high, only four boys under 13 employed, none under 10; won't have any under 10; are of no use. The furthest they come is from Chewton Edge, 1½ mile distant; they keep birds, lead horses, &c. Only three women work on the farm; they weed corn, cut thistles, &c. There used to be 100 people employed on the farms, when wages were low; there are now only 13, principally owing to the use of machinery.

230. *Mr. Carville*, agent to C. Tudway, Esq., Wells.—It is entirely the fault of the parents if their children are not sent to school now, as there are so many schools. Little boys are only employed for six months in the year, when the corn is first sown; the age of such boys is generally from 7 to 10. They begin at six in the morning, and stay all day, but then the days are getting short, and they are off the field before sunset. Wages, bird-keeping, varies from 1*s.* to 3*s.* They keep off the birds by hallooing, and generally have a small hut to protect them from the bad weather; no holiday on Sunday; it is light work, but plenty of it. After they are too old to keep crows there is no regular work for boys, except taking care of cattle; used formerly to drive the plough horses, but that has gone out. Mr. Tudway's property consists chiefly of dairy farms, so there is in fact little work for women and children, who are mostly employed indoors. The children of occupiers of small holdings from seven to 10 acres are much more employed than those of labourers; they work with their father. Mr. Tudway's labourers live near Wells, and, owing to the extensive charities in that city, are well enough off without sending their wives and families out to work in the fields. Employment of women is quite exceptional; is has gone out a great deal of late years; they go out on their own account leasing corn after harvest, and then all the children have a holiday, and go out with them. No traces of gangs, and there never have been any, except that in hay-making time the farmers will get a few women and children together to make hay. The property is well supplied with cottages, and no one has to go far to work.

231. *Mr. Mildane*, bailiff to E. Lovell, Esq., Maresborough farm (acreage 600).—There are no women employed on the farm; they think it pays them better to stay at home; he does not like women in the fields, they make a noise when they do come, which is usually in hay and harvest time, to help their husbands drink the cider. Four boys employed on the farm, all from 10 to 13; none of them can read or write; never had a boy under 10. Two boys come from Croscombe (two miles); the other two live in a cottage on the farm. Their work, in spring bird-keeping, cutting turnips; in summer, weeding corn, haying, dressing land, picking stones, hacking thistles; in autumn, pulling turnips, keeping crows; picking and pulling weeds in winter. Never put to any work too hard for them. One generally assists the shepherd. Hours of work 6–6 in summer, not so particular in winter. When bird-keeping work all Sunday, but are paid. They are allowed half hour for breakfast, one hour for dinner. There are not enough cottages on the farm, and most of the labourers come from Croscombe or Horrington; does not much like his labourers, who are not such a good class of men as Mr. Tudway's. All the cottages are not let; it is a bleak cold place (near the top of Mendip). The cottages are let rent free to men labouring on the estate, 10*s.* being the wages, 12*s.* for carters and shepherds, and a cottage; but most prefer living down in the valley, and coming up to work, because holding cottages like this they can be turned out at a week's notice, and are not allowed poultry or pigs. The cottages are very good, all four rooms, with outbuildings at the back; two cottages to 100 acres the usual thing; there is no scrub-boy. I saw four boys working, two big ones hoeing mangold, the other two following and singling them. These Mr. Mildane told me are not regular workmen, but he hired two big boys, (17 or 18) at 6*s.* the acre, to hoe the mangold, telling them to bring two smaller ones to single; they give the little boys 6*d.* a day. A shadow of the gang system.

232. *Wm. Allen* (12 years old).—Had never been to school. Came from parish of Horrington, and was working with three other boys singling mangolds.

Wages 6*d.* a day, paid by his big brother who hoed. Usual work bird-keeping, thinning mangolds, &c. Seemed in a great fright, but his brother had just thrown a clod at him, and thought Mr. Lovell meant to ask about it.

233. *Joseph Allen* (19 next month), rather doubtful about his age.—Has been to school, but forgot all he learnt; never went to school much, cannot recollect how many years ago he went last.

234. *Joseph Allen*, father of above, shepherd to Mr. Lovell; wages 12*s.* and cottage.—Has four boys, all out at work; all boys been to school a little, but very little, at Horrington. As soon as they are able to work they get work, one or two at 7, generally not till 10. The work is bird-keeping and sheep-keeping. Only one of his boys can write; two of the boys working are his. He has one daughter at service.

235. *Thomas Penny* (does not know his age, thinks about 12 or 13).—Lives in one of Lovell's cottages. Came originally from Yeovil. Has never been to school, but wants to go. Does the regular thing in work.

236. *Alfred Foxwell* (age 10).—Has been to school but forgotten. Masons' boy.

237. *Rev. R. Lambert*, curate of Wells (has just been appointed to a Wiltshire parish).—The agricultural districts in the neighbourhood of Wells have lately been separated from the town. Believes the condition of Somerset very superior to Wilts, where the wages are lower. Has a parish of 2,000, and believes that five children in eight are illegitimate, which he puts entirely on female agricultural labour, the farmers setting the bad example themselves; one instance, a farmer and Mr. Lambert's own churchwarden, and not at all ashamed of it. Highly approves of the Commission, and hopes he will be visited in Wiltshire.

238. *Rev. B. Brewitt*, rector of Westbury (population 666).—The cottages are crowded, but it is difficult to interfere, as many of them are freeholds; the rest are held of the Ecclesiastical Commissioners. There is a good deal of crowding, especially now with the railway coming, as the navvies lodge in the village, and of course that is a bad thing. The cottages are of a bad class, as is usually the case with Church property, where little is done to repair them.

Attendance at school is bad and intermittent. The number on the books 60, the average attendance about 35. The parish is chiefly grass land, but on the

Somersetshire.
Mr. Boyle.
k.

slopes of Mendip potatoes are much grown. In the potato setting and picking time nearly every boy and even girls are employed, for every child can pick up a potato. Then comes the apple-picking time, when much the same happens. There are a good many large gardens to the cottages, and small holdings of three to four acres, and parents find it pays them better to have their children working among the potatoes, or in the garden, than to send them to school. Mr. Brewitt thinks sometimes that the expense keeps people from sending their children to school; they had rather spend the 2*d.* in an extra glass of beer or cider.

There are a great many dissenters in the parish. Mr. Brewitt himself first established the school, and then would have no children in it but those who came to the Sunday school; then he had 80 on the books; since then he had to relax in deference to public opinion, and now he has but 60, and 25 in the Sunday school. He does not think there are any children who have never been to school, but they are taken so early to the fields that they forget all they have learnt. There is a night school in the winter, which begins with 40 pupils and dwindles to six perhaps; some as old as 40, who have never learnt before, come, but all seem to think they are conferring a favour, as when they go to church. Does not see how alternate-day system or half-day can be applied.

There are some large dairy farms in the parish; one man farms 400 acres; but few people are employed; but each generally has a big lad of from 16 to 20, and a dairymaid or farm servant of 15 to 20, who milks the cows and the lad drives them; it leads to immorality, as the farm being fitted up much with cheeses, &c., and the servants thrown together in the back part, the natural consequences result. There is therefore a great disinclination to send daughters out to farm service, and a wish to get them into gentlemen's service. The large farmer mows and does everything by machinery, and on whole farm has but four or five hands.

239. *Rev. Charles Dimsdale,* Priddy (population 251; acreage 1,300; cultivation, mixed and mining).—Over 80 women are employed. "I think that "females working mixed with the opposite sex is bad "for their morals, manners, and language, and begets "rudeness and coarseness."

About 40 children are employed; would not wish them to work under 12 years of age, or more than eight hours at a time. "Alternate daily attendance "would be most suitable, if not daily."

Approximate Number of children at school in summer.

—	Boys.			Girls.			Total Boys and Girls.
	Under 10.	10 to 13.	Total.	Under 10.	10 to 13.	Total.	
On Register of the school.	20	10	30	25	15	40	70
Average attendance	10	8	18	20	12	32	50

There are more in winter. Bad weather seriously affects the attendance in this scattered parish. "The "people cannot afford to send more than two-thirds "of their children on an average through poverty. There is no night school at present. It is "not good "for females to go in the evening, and the weariness "and lassitude of the boys is the principal obstacle to "their learning in the evening, and it is most difficult "in this parish to obtain teachers."

"The cottages in this parish are mostly squatters' huts, and most of them no better than stables, and some so filled that it is impossible that morality and decency can exist. I believe the bad cottages of the poor throughout the kingdom is a great source of immorality and bad health. There are two or three private landowners to whom most of the land belongs. The place improves a little."

240. *Rev. F. Philpott,* vicar of Chewton Mendip.—A large parish, nearly 1,000 population, and extent 70,000 acres. Nearly all belongs to Lady Waldegrave. Has about 150 in his school, but attendance irregular, and believes will never be better unless legislated for by application of Factory Acts. Children taken away from school very early to go and keep crows, which they do by hallooing at them.

241. *Rev. — Brown* (curate of Horrington).—Thinks only system of education possible is to work half the year, and go to school the other half. Boys labour intermittent, and often out of work for weeks together.

The cottages at Horrington are very crowded, and the people take in lodgers whenever they can get them, at 1*s.* 6*d.* a week, which nearly pays rent, seldom exceeding 2*s.* Knows an instance of eight people living in one cottage of two rooms; in one case four people, husband, wife, grown-up daughters, and son of 18 all sleep in the same room. Most of the cottages have a good garden; a good many of the cottages belong to the occupants. Many Horrington people work at a distance from home, as the parish is large and thinly inhabited, and the school attendance irregular, especially in wet weather. The people do not like paying their 2*d.*

Mr. Brown has seen a few cases of women in the fields, and thinks the moral effect very bad.

He thinks it would be a good thing for the boys' hours of work to be restricted; has known instances of a boy having to go into Wells twice a day; got up at 5 and not get to bed till 11, one of the visits to Wells being late at night.

Attendance at school about 40, less in winter.

242. *Rev. T. Jeffery Bumpsted,* rector of Dinder (population 251; acreage 1071·1·39).—No female labour; only three or four boys in the parish work out, and that in different sorts of farm-work. "I would "say, let boys go to work as soon as they are worth "wages."

—	Boys.			Girls.			Total Boys and Girls.
	Under 10.	10 to 13.	Total.	Under 10.	10 to 13.	Total.	
Attendance at School	9	4	13	10	7	17	30

There is an evening school open from October to March, two nights a week, two and a half hours a night. It is self-supporting, and adequately supplies the wants of the day school. Reading, writing, arithmetic, and dictation taught. Number of scholars, 11.

"Cottages better than the average in country "villages. Many belong to Mr. Somerville, the lord "of the manor; nine to tradesmen with whom the "tenants are expected to deal;" rent for a moderate cottage with a good garden about 4*l.* per annum.

243. *Rev. John Hickley,* rector of Walton (population 750; acreage 2,400; cultivation mixed).—There is female labour, but not among girls; they work for the most part in a small factory within reach. Female labour is not injurious, and those who work out are no worse class than others; they get 8*d.* a day, but do not really make any profit of it with wear and tear of clothes, &c. Principal work, bean-planting and potato-setting.

Boys begin work "very early, often at 7 (instances "even earlier, but then employed by parents); at all "times of the year," bird-keeping, plough-driving, and sheep-keeping, and when they once begin to be employed will get regular employment, there always being odd jobs for them to do about the farm. "It "is desirable that they should not be put to regular

"farm-work so early certainly; I do not feel sure 'that legal restriction could effect the object."

Partial work at an early age, 8, would not do harm; they must begin early to learn their business." Bird-keeping is very idle work. The parents are so poor that the extra money is a very great object to them, and it would be unjust to say that in a large family any sturdy boy who can make his living must go to school, and be all the time supported by his father. In face of rents increasing with the demand for land it is very difficult for wages to rise; the only means by which they could, would be a combination among the labourers; but that never occurs to them; they are a stupid down-trodden race, and then they have not the same opportunities of meeting enjoyed by people in the towns, who can combine, and form trades unions.

They are still very superstitious; the custom of roasting a cat alive, when any one is supposed to be bewitched, has not gone out. Recollects at a funeral seeing a bystander throw a handkerchief holding bread and cheese on the coffin, when he came to the passage "Deliver us from evil." It is supposed to be a cure for the king's evil.

"Ample means of education; good school, excellent master; for farm labourers and boys there has been a free night school all the winter for 15 years; advantage not fully used. Cause, chiefly the ignorance and degradation at home, and this the result of centuries of neglect.

"Cottages not much to complain of; some defective, but gradually improving, as leaseholds fall into the owners' hands."

244. *George Blindman* (mason), teacher at Admiral Tryon's night-school.—As a boy went to school at Dinder. Has two or three boys of 10 or 11 just left school; most of them from 14 to 16, but a few up as old as 22; some married men with families up even to 30. All are at work all day.

School twice a week, Tuesdays and Thursdays. Reading on Fridays. It is under Admiral Tryon's management. The average attendance is 10; last winter 16 came.

Women came to the readings, often as many as 80; but not on other nights. Mr. Field and self only teachers.

Shepton Mallet Union.

245. Meeting of the Shepton Mallet Board of Guardians, Mr. Richard Norman in the chair.

Mr. Richard Norman says that children are much kept from school on account of the expense. Men with only 10*s.* per week wages cannot afford to send children to school, if they have a large family. He knows two families of seven children under 9 years of age, and in each of them the father would have to spend nearly 1*s.* in schooling for his children; at such a time pence are valuable. He thinks that in the case of large families the board of guardians ought to be allowed to advance money to parents of large families, who are not receiving relief. Where there is an able-bodied father who can get work no assistance can be given, and yet his wages are not sufficient for him. A married woman who called the other day about receiving aid for her children, got none until she received a hint to say that one or two of them were ill.

Very few boys are employed in any way in the union, as it is a dairy country, and boys are not wanted. They are not wanted to drive the cattle, which is generally done by disabled men; there is usually one boy, the scrub-boy, employed on the farm. But Mr. Pratt (rector of Shepton) complains that in the potato-setting time, and also in the beer-bottling at the great breweries at Shepton, and the cyder-bottling boys are much taken from school. Mr. Denman complains that it is generally difficult to get boys to work early enough.

The young women employed on the farms, who are only employed in dairy-work and milking, generally bear very good characters; and men will always rather take a wife out of a farm than out of one of the factories. Women hardly work at all except in making hay; in some places men will not work with them, on account of the incessant jokes that go on.

The impression on me was, the board seemed to wish that education should be compulsory, but they thought that neither the Factory Acts nor the Small Workshops Act were applicable to the case. The feeling seemed to be in favour of night schools; the difficulty being in the fact that boys go to sleep after a long day's work, and that many of the boys go to bed at 6, almost directly after they come in; and that the numbers dwindle gradually.

At Croscombe the Sunday school is very well attended by boys who work all the week. It is a populous parish, and provides labour for several parishes near. There are men and boys, who go up to work for Mr. Lovell, more than three miles; it is under no one's charge in particular, in which respect it differs from Dinder, where, as also at Doulting and Pylle, cottages were pulled down some years ago, because the landlords before the Union Chargeability wanted to escape rates, and found they could get labourers from other parishes.

They go some distance to work also from Wootton and Werminster; from Kelverstreet in Shepton they go to work at Doulting.

The great complaint was that the cottages are bad all over the district; the best are on Lord Portman's and Mr. Napier's property; there were 20 or 30 built the other day at East Pennard. No cottage should have less than three bedrooms. In Shepton as many as 10 or 12 live in one cottage of two rooms. The reasons seem to be that the people are content to live where they do; and that a good many of the cottages are copyhold, and others held under the town; of course nothing is so hard to remedy.

At Pennard the wages are 12*s.*, at Shepton 10*s.* and food, which comes to 5*s.* or 6*s.* more; at Pylle 9*s.* and a garden, which gives the landlord, whether for good or ill, a greater hold over the labourer.

246. *Berkeley Napier, Esq.*, East Pennard.—Does not believe that women are employed at all in field labour; and as for boys, no legislation can stop parents with small wages from sending them to work as soon as old enough. A widow with six children, if the children are not allowed to go to work, would be better off in the union than out, for there she is allowed 1*s.* 6*d.* for each child.

247. Cottages belonging to B. Napier, Esq. East Pennard. Extract from Diary, March 18, 1869.

Drove on to East Pennard, where call upon Rev. Mr. Goldney, who took me to see some cottages built by Mr. Napier, principal landlord. Four pairs built on a small plot of ground, of stone and slate; each cottage has about 25 perches of allotment round it. Let for 4*l.* to labourers; the policeman, whose cottage we went over, pays 5*l.* The principal sitting room has a window to the front, and the bedroom above has a gable; the entrance is rather thrown back, and from it a passage leads out to the back, the staircase and a small larder being on the left-hand side, the kitchen and back kitchen on the right. In the kitchen is an oven; the boiler is in the back kitchen (don't like boiler in-doors). The back kitchen window opens at right angles to the privy door, the privy being attached to the cottage, but the people say there is never any smell. Upstairs there are three bedrooms; the front very good and with a fire-place, but that, strange to say, was papered up; the smaller rooms were one over the back kitchen, the other over the larder and passage out at the back, neither with fire-places. A small family of four children, and, as usual, the third bedroom used for potatoes.

248. *Rev. Henry Pratt*, rector of Shepton Mallett (population 5,147).—Is very much in favour of night

Somersetshire.

Mr. Boyle.

k.

schools, but complains of the difficulty of getting them well attended. Grown-up men do not like to come with boys, who perhaps know more than themselves; the attendance begins well, and dwindles. Charges 2*d.* for attendance, and believes that that brings people; for having once paid their 2*d.* they do not like not to get their money's worth. Would like to have a Government grant, but fears that an examination would frighten away most of the pupils. It only goes on in winter. Does not at all approve of the Factory Acts being applied to agriculture; would not himself like to employ a boy alternate days or half a day; and as for the Small Workshops Act, they would forget very soon what they learnt unless they came to a night school. Is rather inclined to a plan of sending them to school for a few months in the winter, say four, when there is little work to be done in the fields.

There is great immorality in Shepton. In that respect thinks that towns are far worse than the country; can venture to judge, having himself come from a country parish, and found a great difference. The cottages are very bad, but what is to be done? There is no property that pays so badly.

249. *Hon. and Rev. Edward P. A. Talbot,* vicar of Evercreech (acreage 4,000; population 1,321; has much decreased; the census of 1861 included navies on railway and factories, which do not exist now. Cultivation pastoral; grass-land, dairy cheesemaking).—"No child under 12 years of age should be allowed "to work so as to prevent regular attendance at school; "Sunday schools should be included in school attendance. Education good, might be better by compulsion. No night school at present; tried for several "years without any success. Education of younger "children good, which seems to be the reason, most "can read and write, and those who cannot do not "care to learn.

Number of children at school.

On the register -	73	20	53	64	15	79	172
Average attendance	34	19	93	29	14	43	96

Winter and summer much the same.

Cottages generally bad; few with three bedrooms, mostly with one or two; chiefly belong to small owners of property. Rent low.

250. *Rev. A. Goldney,* vicar of East Pennard (population 656; acreage 2,880; cultivation chiefly pastoral; the farmers producing cheese; there are also orchards, and a very small quantity of arable).—In spring a few boys are employed in bird-keeping; in autumn women and children in apple-picking, in winter a few women and boys in ground-dressing. Would like boys not to work under 10; "mothers generally do not "consider the earnings of the little boys sent out to "keep birds sufficient to pay for wear and tear of "clothes, &c., they let them go to accommodate the "farmers, often very unwillingly. Moral evil is produced by the practice of sending dairy-maids into "the fields to milk the cows in company with a lot "of men. In bad winter weather this is injurious to "health, the milking taking up four or five hours "daily; the great amount of Sunday work is much "to be deplored;" but does not see how it is to be helped.

The total school attendance in summer is 65; 28 boys, 37 girls.

The total school attendance in winter is 54; 20 boys, 34 girls.

Nearly all the boys are insufficiently educated; scarcely any girls; "the boys generally forget what "they have learnt at school, or nearly so." There is a night school open 24 weeks from October to April open four nights a week, 1½ hour. Attendance 10. Inadequate to supply deficiencies of the day school, owing to late hours of work, and distance from the school-house. Reading, writing, and arithmetic taught.

Distance in bad weather interferes with attendance in the day school, especially with the very young children. "In a few families the parents are willing "to send their children to work at an early age for "the sake of the earnings; chiefly when the parents "are impoverished or demoralised by the public-"houses and beer-shops.

"In some cases the cottage accommodation is very "bad, both sexes and all ages being mixed together "in one bedroom; the moral effect is bad; the injury "to health is not very perceptible, as the cottages are "much scattered; the poor do not generally complain "of discomfort, being accustomed to be crowded "together."

The principal landowner has lately built eight cottages, with three bedrooms each, and out-buildings, ample garden ground, and water supply; he has a few other cottages, with two bedrooms each, roomy and substantial. Many cottages have been built on waste land (under the lord of the manor) by poor persons, and are small and badly built. Some are owned by farmers, they are mostly small and inconvenient. In some cases the drainage is bad.

The principal landowner lets his best cottages at 4*l.* a year each; the inferior cottages at rents varying from 8*d.* to 1*s.* per week. A few cottages, owned by small tradesmen, are let at a much higher rate,—much too high; the demand exceeding the supply.

251. *Rev. W. M. H. Leir,* rector of Evercreech (population 1,218; acreage, 4,509; cultivation chiefly pasture—dairy cows fed and good cheese produced).—Women work out in the bean-planting season, and occasionally weeding corn and haymaking; no girls; "boys as soon as they are able to earn a few pence per "week." They ought not to go "before 10 years of "age, or they have little chance of even the most "elementary education." There is a daily National school, and another kept by the Wesleyans besides two dames' or infant schools. There are "more "cottages than enough for the supply of the la-"bourers; they are, however, too small, and the usual "results are unfortunately too frequent;" most have gardens, and some labourers rent small plots of land of their employers.

252. *Rev. Wm. Meade,* rector of Binegar (population 258; acreage 1,220; cultivation chiefly pastoral).

Statement of children under 18 in the parish employed in agricultural labour.

—	Under 8.	8 to 10.	10 to 13.	13 to 18.	Total.
Boys -	1	2	10	11	24
Girls -	—	2	3	8	13
Total -	1	4	13	19	37

N.B.—The only women employed in the fields over the age of 18 are two widows.

The employment in spring consists in bird-keeping, stone-picking, ground-dressing, weeding corn, potato-setting.

The employment in summer consists in thinning weeds and mangold; milking.

The employment in autumn consists in potato-digging.

The employment in winter consists in tending sheep and cattle.

As a rule they live near their work, but many of the parishioners go to work for Mr. Davis up at Greenore farm, a long way to walk, but Mr. Davis has not cottages on his property; this is, however, the exception.

Female employment ought to be discouraged, but it is hard to prevent it in large families, where girls preponderate; "it is not good for morals, or for pre- "paration for domestic duties; and dressing ground "in bad weather causes sickness. I think parents, "landlords, and employers ought to be constantly "reminded, *i.e.* yearly, of their duty to see that "women and children are not overcrowded. Some "Government recommendations might well be read "out in churches and chapels every spring on the "subject. Some boys of 6 can be of use, some of 8, "and if they come to school in the winter, they might "be allowed to earn something in the spring." An application of the Printworks would be more feasible than the Factory Act. But to ensure attendance at school would recommend "night schools in winter "months, from the middle of October to the end of "February for big boys, and regular attendance in "winter months and whenever not employed for "smaller children."

There are on the school books, 11 boys under 10, and 2 over. Total 13.
There are on the school books, 13 girls under 10, and 8 over. Total 21.
} Total 34.

About 20 under the age of 13 attend very regularly, the rest are irregular. It is a drawback that the school is three-fourths of a mile from the village, and poverty sometimes prevents the parents having the pence ready on Monday morning. There is no evening school; it has been tried, but given up owing to all the work falling upon the rector. All the children in this parish come to school, but some of those in Wells parish, which is very extensive, stretching up Mendip to within a short distance of Binegar, are too far off to go to school, and have never been.

"Our cottages are moderately good; some are thoroughly bad and dilapidated, being held on lives, which is a great evil in cottage property; several have two bedrooms, hardly any three; they take a lodger if they can cram him in. The landowners cottages are pretty good, but those which are sub-leased are in various stages of dilapidation and discomfort. The landlords ought constantly to be reminded of the necessity of having privies or closets for their cottages. This is a great point; morality, education, health, and comfort are all affected, in my opinion, by the absence of privies. Nothing done in building new cottages, because the whole parish is agricultural, and is held on lives under the Ecclesiastical Commissioners. Rent varies 4*l.* to 6*l.*

253. *Rev. John Davis*, vicar of Ashwick (population 573).—There is no school in the parish; but the children go, some to Binegar, and some to the new district of Oakhill that has been formed out of part of this parish and part of Shepton Mallet. There are very few who do not go to school somewhere, with the exception of some girls, who go out nursing as soon as old enough; but there are no boys utterly uneducated, though taken sometimes for occasional work, such as keeping birds. The women work very little, except as farm servants, milking, &c. (nearly the whole parish is dairy), and some go out for milking only at 2s. a week. They are quite as good characters as the other women. There is a good Sunday school, but no night school; it is a long straggling parish, and you would have to have two or three to do any good. The population has gone down one-fourth since 1840, principally owing to some colliery works being closed, and the parish is now purely agricultural, except for the great brewery, that generally takes the best hands, as the wages are higher. Some of the cottages are bad, but they are being improved; there are some with large families, and only one bedroom; yet, though it seems they must see things they ought not to see, Mr. Davis does not consider the young people more immoral than in most country villages.

254. *Rev. W. J. F. Edwards*, vicar of Stoke Lane (population 694).—Boys are not taken away from school till 10; population too large for all to work in the farms; go earlier to collieries. The population has decreased one-third since 1841, through the railway coming, and some young married couples going to Wales.

The school much interfered with, inasmuch as at 10 a boy begins to learn something; taken away for potato-digging.

Alternate weeks would be better than alternate days.

The population is so large for the acreage that many people are obliged to go far for work, even boys, as far as Vobster, four miles.

Coal carriers make it populous.

Many old families who never have moved, been here for 200 years.

Very little employment of women and girls; perhaps wives of labourers sometimes hoe wheat and weed; only about the fields near home. No worse characters than other people; not a sufficient number to make it tell upon their character.

The parish is high, with a fine healthy air, and good water.

Cottages inferior to most parishes, but being improved steadily, owing to the cottages being on lives (under Mr. Knatchbull), and of course the interest of the lessee to get as much as he can at as little outlay as possible. The bedroom accommodation very bad; many with only one bedroom yet morals not very bad. Birth of illegitimate children not thought such a disgrace as it ought to be, considered a creditable thing to be married 12 months before a child is born. Mr. Edwards thinks it depends very much on how the church work is carried on, This parish has always had a bad name; a rough lot, but not a dangerous lot. Since the coal-carrying went out, not so much drunkenness. Some of the cottages very good, and as the leases fall in Mr. Knatchbull lets them to the farmer, who lets them to the tenant; these are the best cottages, and the general character is improving.

Children and girls kept at home to knit, and don't go to school at all. Still there is a good National school and Sunday school and there is a night school; last year the schoolmaster taught, which is hard on him; labourers used to give 3*d.*, then he lowered it to 1*d.* and now it is better attended.

Entirely dependent on the land; a thorough agricultural parish.

Wincaunton Union.

255. Resolution passed at the meeting of the Board of Guardians, Wincaunton, March 17, 1869, T. E. Rogers, Esq., Yarlington, chairman of the board, in the chair:—

That in regard the employment of women and children in farm labour the Board of Guardians are strongly of opinion that in this particular district there is nothing whatever to *call for legislative interference*, but if it should be deemed desirable on general grounds to legislate on this subject, the board consider it important in the interests as well of the labourer as of the employer, that any absolute prohibition of all such employment of children should not extend beyond the period of 9 years of age in the case of boys, and of 13 years of age in the case of girls.

256. Minutes of the above meeting, Wincaunton, March 17, 1869.

(1.) Boys first work in picking stones, keeping sheep, driving horses; at seed-time they are employed in bird-keeping, and would not go to that under 9. At Marston there is hardly a boy under 10 in regular work. These small boys are quite able to take care of horses. The boys themselves would rather do work than go to school.

(2.) Girls do some apple-picking in the autumn, but none under 10; their principal work is gloving, and where not gloving, weaving.

(3.) Very few women work out, generally not five or six in a large parish of 1,000. A farmer mostly expects his labourer's wife to come out with her

Somersetshire.

Mr. Boyle.

k.

husband in hard-working times; but there are not 10 in the union who work out all the year round. Those who do work are mostly on the job, such as weeding corn, apple picking, &c.; bean planting for women has almost entirely gone out of fashion. Most of them do gloving, and would not come out to work in the fields, because gloving is so much more remunerative. They work out most at Shepton Montagu. It is a dairy county, and milking is done very much by men, and the farm-servants.

(4.) Few live a mile from work; the parishes are small and close together. Many work near enough to their homes to be able to go home to dinner. Generally the shepherd and carter live on each farm, and sometimes one or two more; the other labourers as a rule hold of the landlord.

(5.) Women work 8 a.m. to 6 p.m.; boys the same hours as the men, 6 a.m. to 6 p.m.; and they all take meal hours out of that, generally two hours, half an hour at 11 for luncheon, an hour at 1 for dinner, and in haymaking and harvest another half hour at 4.

(6.) (See resolution above.) Mr. Rogers would like boys to begin work at 9, Mr. Richards at 10 years of age; but hopes are expressed that the Legislature will consider in this case how parents are to be able to support their children. Mr. Rogers thinks that in this district no legislation is really necessary. The case of a family at Meare, in Wilts, was mentioned, a husband, wife, and 8 children all under 12 years of age. The husband's wages are only 10*s.*, and it would be impossible for them to get on were his boy of 9 forbidden to earn his 1*s.* 6*d.* a week. Mr. Rogers proposed the above resolution. Mr. Richards proposed 10 years as an amendment instead of 9, but no one would second him, and the amendment dropped. Mr. Richards gave the want of more schooling as his reason.

Mr. Wood complained much of the gloving taking girls early from school. Mr. Rogers proposed to limit the age at which girls might begin out-door labour to 13; others proposed rather higher on moral grounds; Mr. Rogers' proposal was carried. Both in the case of girls and boys the meeting wished it to be understood that they were distinctly against any legislation on the subject, but that if that was unavoidable owing to the circumstances of other parts of England, the above are the ages beyond which it was their opinion no legislation ought to go.

(7.) In the case of women restriction is unnecesary, they place sufficient restriction on themselves.

(8.) The schools in the district are generally good. Mr. Rogers thinks there are few children who cannot read and write; in Charlton Mr. Wood says there are few who can. There are generally sufficient means of education, though not always taken advantage of; parents are apathetic about it, and many will not send their children even if the pence are paid for them.

(9.) Great improvements are going on in cottages. Mr. Rogers mentioned that he himself, amongst other people, was putting up some new ones with three bedrooms. They are good at Cadbury and at Barrow, and also at Mr. Digby's property; some very bad, and a good deal of overcrowding, but not to be compared to the overcrowding in towns. The population in the agricultural districts is decreasing, so there is no lack of accommodation. Whereas formerly he had plenty of applications directly a cottage was vacant, Mr. Rogers now often finds it difficult to let them. If you build a good new cottage you cannot ask a higher rent; the people do not value improvement in accommodation at 1*s.* a week. Overcrowding is not general, nor is lodging. Mr. Rogers does not allow lodgers, and it is generally discouraged by landlords; there are some at Charlton, where a company is now draining.

(10.) About Wincaunton there are no gardens or allotments, and it is impossible to get a bit of ground. At Bruton Sir H. Hoare and Lord Ilchester have both two fields let out as allotments. There are not many allotment parishes, except the towns such as Castle Carey and Bruton; but a farmer lets out a lug of ground on his own farm to labourers. Mr. Wadman says that at Horrington there are good gardens.

257. *Genge Andrews, Esq.*, Rimpton, president of the Somerset Chamber of Agriculture.—Farms his own land, and about half the parish belongs to him; lets out his cows to dairymen, which is the usual custom in this district; one takes 120 of him. One hand can milk about 10 cows in 1½ hours, which is the time necessary to do it in, so a good many hands are required for the purpose. The farmers themselves are a very ignorant set, most of them never have an account; their system is one of small profits on each article, and so they come to think it an important economy to save a few pence gained by having a boy from 8 to 12 to keep birds for them, instead of one a few years older, to whom they must pay rather more.

258. *Mr. Amor*, occupier, Bruton.—Boys go out very early to work, some at 6 or 7 years old; they drive plough, keep birds, pick apples, &c. They must work because wages are so low. The men are entirely dependent on agriculture, but women work mostly in a factory and gloving; some go out in the fields to work, but these chiefly the old school of women, and those labourers' wives, and only in the busy time; they clean ground, cut couch, plant beans, &c.; they plant beans with a stick, making a hole, and dropping one or two into into it. It is tiring work owing to the stooping position. The girls glove; this they prefer to service, and it is often difficult to get servants.

A good man can make 11*s.* or 12*s.* a week; am perfectly ready to pay a good man well, it is well worth while. Some are worth the 12*s.*, some not worth 6*s.* The usual money given is 9*s.*, some give 10*s.*; some cider, two pints, and more in summer. It is not a regular custom to give cider.

259. *Mr. Sealey*, occupier, Milborne Port.—Women and girls are occupied mostly in gloving, this place being a gloving centre. It is a big village, population 2,000, Sir W. Medlycott the landlord, and a labouring population. Do not think that education is much wanted, but the cottages should be improved, and that is to be done through the landed gentry. The question of how it is to be done is one very hard to answer, as cottage property does not pay. Has two cottages on his farm, each having only two rooms, into which the most you can put is a married pair, when children come it would be overcrowded; pay 6*d.* for one, 9*d.*, for the other, and let them to the labourers at the same rate. Prefers that system to giving a cottage as part of the wages. Most of the labourers live in the village, and come out to work, but it is only half a mile.

260. *Mr. Brain*, occupier, Corton Denham.—Gives 9*s.* a week and three pints of cider in winter; in summer, haymaking and so on, as much as ever they can drink. They have to pay for their cottage out of their wages, generally 1*s.* a week; for some of the better rather more. Employs three women regularly at any job about the farm, such as with the straw for threshing, turnip-singling, weeding, apple-picking, &c.; pay 8*d.* a day. In the weeding time has to get extra women. Has only two boys in regular employ under 12; don't think them much good; but of course in bird-keeping time has out a few younger to keep birds. Farm mostly dairy, but a good deal of arable too.

261. *Wm. Bird*, relieving officer, Wincaunton.—Reckons usual wages in the district at 9*s.*; some give cider; few higher wages than the above; an unmarried man, though good at work, will often get no more than 7*s.* Cannot make out how they live at all; they have nothing to eat and drink but bread and cheese and cider, and sometimes a bit of pork. There is not much out-door work for women except at Cucklington, and the Wilts border generally. Planting beans by women goes on to a certain extent, clearing ground, potato-setting, &c.; but it is mostly a grass country, and most of the work is done by women, who

live in the farm house. The people get very good cheese at 6*d.* a pound, it is called Somerset cheese here; the cider is good. Cottages in some parts of the district are bad, and there is a good deal of overcrowding, chiefly owing to the admission of lodgers; immorality naturally follows. Some large proprietors, such as Lord Westminster, about here, are building good cottages now. Rent usually 1*s.* to 1*s.* 6*d.*, sometimes lower.

262. —— *Ridley*, Bayford.—Had a bad hand and could not work; generally jobs about and makes 9*s.* or 10*s.* a week, not more. Has a wife and four children.

263. *Rev. Canon R. Meade*, Castle Carey (population 2,060; acreage 2,581; chiefly pastoral; a cheese district).—"Some boys are employed constantly; "their employment then consisting in keeping sheep, "and keeping birds off corn, and in weeding; the "bigger ones in milking. Boys are employed in "October and November in picking cider apples and "potatoes, and in dressing ground." Women and girls earn better wages in the factories, so hardly work out at all. "Children are not employed at a "very early age, and are well treated. There is a "National school for boys and girls, an evening school "during the autumn and winter, an infant school, and "Sunday schools."

The cottages are fair. "Some have too many "occupants. I can hardly specify immorality as a "direct result, but overcrowding must have that "tendency. A few cottages have small gardens "attached. A benevolent inhabitant, the Rev. "F. W. Gray, who now resides at Penge, lets out "about 36 or 37 acres of good land to the working "poor."

264. *Hon. and Rev. Walter Portman*, Corton Denham (population 410; acreage 1,296; cultivation mixed, arable preponderates).—"Abstract of condition "of parish, schools, &c.:—

Farms five (not including glebe).

Freeholds seven (of which five are held by labouring men now in receipt of wages; four of them very bad houses).

Shops, two. Carpenter, one. Blacksmith, one. Shoemaker, one.

Innkeeper, one (with a little land).

Carriers or contractors, three. Dairymen, two.

Labourers cottages (strictly) 55, of which 46 are divided among the tenant farmers, the rest are in the landlords' hands. I should be glad to see all cottages in the hands of the landlord excepting two, three, or four to each farm, according to its size, for carters and shepherds.

There is overcrowding in some instances, but considering that some men, heads of families, and several young single men work out of the parish altogether, it cannot be said that the cottage room is not sufficient for the labour required in the parish. Average one house to 24 acres. Women employed about three to a farm; a few more at special times, viz., hay, apple-picking, and the above number not always out. The strictly labouring population may be said now to consist of 50 families, containing, living at home, 232 souls. About schools, 58 at school of some kind during the week; very few lately over 13; at present only one girl in day school.

Field work removes the boys about 9 years old. Gloving or domestic employment the girls from 11 to 13. Attendance about even, except in the autumn quarter, viz., July to October, when it is worse.

Night school, 1868–69. November, December, January, February three nights a week from 6.30 to 8.30 or 7 to 9. 15 or 16 weeks. Three R's taught, with some dictation. Number on books, 32. Five under 12, 27 over 12; average 18. Boys are wet and tired, and have to begin almost from the beginning each year. Can do little more than keep them able to read and write with the average, but the system is popular with them and is becoming more so each year.

Employment of children, very variable; boys go out young, 9 to 10, seldom younger for any farmer, but they do to help in allotments and such like, *e.g.*, one brother bird-keeping will perhaps take out a younger one. I should say, as a rule, young women never do field work; the glove trade keeps them employed for the most part.

There may be six children in the parish, certainly not more, about 8 years old, neither at school nor at work. "There are 12 boys and four girls growing up "with insufficient education." They have been at school some time, but very irregularly, or are newcomers (three are so). Can read and write badly; left early, before being properly grounded. Some of these boys attend night school but are very much behind the rest. With the girls and young women the fault is their own, they will not try to learn anything.

"The parents means are so small that they remove "children who can earn anything; the girls for "glove-stitching, the boys for field-work, otherwise "they send them very well. Owing to the cir-"cumstances of the parish it would be difficult to "enforce attendance for six consecutive months, but "I should consider that attendance for six months in "the year would be desirable. The Factory Act "would not answer here." Boys should not work out till 10 years of age, nor more than 10 hours a day; no restriction need be placed here on female labour; "they work quite as much from choice as from com-"pulsion."

"The crowding of young persons together in cottages is not conducive to morality, but sometimes a large crowded family turns out well, sometimes the reverse; as to health it seems to make little difference. All that are crowded are crowded with family."

265. Cottages at Corton Denham.

(1.) "In newest built one storey high, sitting-room 13 ft. 9 in. by 13 ft. 2 in. and 7 ft. 6 in. high; bedrooms 13 ft. by 9 ft. and 7 ft. high. A good old cottage would have a sitting-room 12 ft. square, about; bedrooms 13 by 12; the worst (not freehold), sitting-room 10 by 12, bedrooms the same. Ventilation is put in good, if the people will use it; drainage generally bad, in some cases none.

(2.) The newer, two largest cottages, three bedrooms, sitting-room, pantry, and backhouse; some have two rooms under. With most of the others two bedrooms, sitting and back room; a few only one bedroom and one room under, and no backhouse; outhouses deficient except in the newest cottages; in some cases none of any kind. Water supply very good by nature. Pumps very rare; garden attached to nearly all the landowner (Lord Portman's) cottages, but not large. There are 15 acres of allotment ground let in one rood plots. Rent 1*s.* and 1*s.* 6*d.* a week. The farmers hold 46 cottages with their farms, the landlord 10.

266. *Rev. Hy. Bennett*, rector of Sparkford (population 305; acreage 983; cultivation four-course arable, and pasture for dairy purposes).—No girls work out; boys from 10 years upwards, and about 12 women "in haymaking, harvesting, and apple-picking, only "the able-bodied." No restriction necessary in either case. There is a weekly and day school fairly attended to about 8 years of age. Cottages good and not crowded; "all have good gardens, about a quarter "of an acre each."

267. *Rev. Wm. Castlehow*, rector of North Cadbury (population 966; acreage 2,688; cultivation chiefly pastoral; "there are many large dairies in the "parish and several apple orchards for cider").—Boys are employed all the year from the age of 10; "a few under that age occasionally in bird-keeping "and apple-picking; a few girls occasionally in "ground-dressing and apple-picking; about 10 women "in the whole parish, besides a few in milking only. "Since the introduction of steam power the number "of females employed has much diminished, and a "few girls only are employed as stated above, so

Somersetshire.
Mr. Boyle.
k.

" that I do not think any restriction desirable. I " think it desirable that boys should not be removed " from the school so early ; but if they were restricted " from working on the land before the age of 12, for " instance, they would not, in the case of large " families, be necessarily sent to school, as the wages " are too low (about 9*s.* or 10*s.* a week for an able-" bodied man) to allow school pence for more than one " or two in a family. There is a parochial school, at " which the average attendance is about 40. The " chief cause of non-attendance is early labour ; the " boys are taken away at about the age of 10 to work " on the land, and the girls at about 11 to glove-" making."

The cottages are generally bad, some overcrowded and " several cases of immorality in consequence have " come under my notice ;" most have small gardens ; a few have none; " there are allotments of glebe in " three parts of the parish."

268. *Rev. C. F. Tink*, rector of Shepton Montague (population 433 ; acreage 2,424; cultivation mixed ; a long straggling parish ; principal proprietor, Lord Ilchester).—Boys begin to work at 8 at all times of the year. Usually begin by bird-keeping. As a rule girls are not employed ; now and then there are one or two; for instance, there is a grown-up girl, rather weak in the head, who cannot go out to service. Most go out to service ; but there is a little gloving too from shops at Milborne Port. Labourers' wives work out sometimes, but have no regular work, and not necessarily for the farmer for whom the husband works. No boy should go out to work before 11 years of age. Women's work is not desirable ; the cottages of those who work on the land are usually untidy. There is a National school and a parochial school in the hamlet of Stoney Stoke ; a night school in the vicar's house during the winter months for boys.

The cottages are bad ; there are a good many with only one bedroom. Not much overcrowding, except in one or two cottages in Stoney Stoke.

Frome Union.

269. *Henry Blathwayt Festing, Esq.*, agent to the Duke of Somerset. Maiden Bradley (population of Maiden Bradley, 653 ; acreage, 4,567a. 3r. 37p. ; cultivation mixed.)

Number of women and children in the parish employed in agricultural labour.

—	Under 10.	10 to 13.	13 to 18.	Total.
Boys -	—	40	30	70
Girls -	—	—	40	40
	—	40	70	110

Besides 47 married women. Total females 87.

In winter there is little work for women and children ; in spring, weeding ; in summer and autumn, the hay and corn harvests. " I consider the employment " of females in agricultural work most detrimental " to their morals ; and it totally unfits them for their " domestic duties, thus driving the husband nine " times out of ten to the public house for necessary com-" forts, which he does not find at home when he returns " tired from work. At the present rate of wages, " I am not prepared to recommend any restriction " should be placed on the employment of females. 10*s.*, " 11*s.*, and 12*s.* is too little for one man to keep a family " on honestly, and in winter the wages are lower than " in summer. If the present unfair system of assessment " for the poor rate was changed, whereby towns would " have to keep their own poor instead of country parishes " so greatly doing so, the farmers could raise the wages, " and thus help the women to remain at home. How-" ever, in this parish the women like the freedom of " out-door work."

" There is a steady willingness on the part of the parents generally to send their children to school, for which they pay 1*d.* weekly ; but if the families are large, the parents take them away to work at about 10 years of age for the boys, and 12 for the girls. There is a great disinclination to go into service, but it decreases gradually as education increases. No boy under 13 ought to work more than five hours a day, and no woman more than six, and no boy under 12 ought to work at all. To secure attendance at school, I think a discretionary power given to the magistracy at petty sessions would work well. "

On the register of the school at Maiden Bradley.

It does not supply the deficiences of the other school, " but it is doing good." The difficulties " in its way are " want of teaching power, a large " staff of instructors is necessary to keep this class of " scholars orderly, as also to attend to them as they " are difficult to classify, both from age and previous " acquirements.

" I believe the cottages in this parish are as good generally as any in England, and what are out of order are gradually re-built or done up, as required. The Duke of Somerset is a good landlord, and the rents are cheap, from 4*d.*, as a minimum, to 1*s.* 2*d.* a week maximum, being charged to agricultural labourers. I do not think cottages can be built to pay, unless the tenant is ground down harshly. I consider cottages as necessary to an estate, independent of the profit and loss question.

" The cottages as a rule have one living room, about 13 to 14 or 15 feet by 12, 13, or 14 ; one back place or scullery, 6 by 8, or 8 by 10, with two or three bedrooms over, from 10 by 8, to 12 by 8 ; If three, the third is smaller ; famous gardens, good outhouses ; all belong to the Duke of Somerset.

270.—*Fussell, Esq.*, iron-master and churchwarden, Mells. There are very few boys under 13 or 14 who go out to work, one of 12 goes out to work with his father, but Mr. Horner takes great care that they go to school regularly, and do not go out to work too young. If there are any boys who have not been to school, it is an exceptional case in a large family, but Mr. Fussell cannot recall any.

Farmers do not like women working, they are too independent, and will not submit to any control,

They do not come out in time, and are idle when they are out.

Farmer Bull employs women, most of them older, for ground-dressing, and weeding, and milking, for which last they get extra pay. Employs one girl of 15, but that is an exceptional case. On some farms there are no women employed at all. Farmer Coxe, where farm is mostly corn, employs no women.

There is a night school.

All the women employed, except the one girl, are married women or widows, and he does not see that there is any loss of character; the girl works with her mother. But Mr. Fussell remembers one or two single women going out and they were very bad.

The village is not well provided with cottages, that is, its worst part, and capital is needed to build new. At Vobster, the coal companies have built very good cottages for their workmen. Mr. Horner looks very carefully after the cottages, moving the families into larger cottages as their numbers increase.

Mr. Horner used to say that no Wells man ever went a mile out of the parish to work.

No Wells man will learn any particular thing, such as hedging and ditching; when Mr. Fussell wants a man for the purpose, he has to go to the parish. When one or two old men die off he does not know what they will have to do for such work.

Women used to weed in high corn, but that is not needed now, as the corn is drilled, and so men hoe it instead of weeding it.

271. *Robert Porteous*, agent to Lord Cork, Marston Bigot (population 379; acreage 2,238; the cultivation may be called mixed, but the pastoral predominates over the arable).—Few women are employed in the parish, perhaps one or two on each farm; there are hardly any boys in the parish to employ, and even if there were, in a dairy country few are wanted.

Their employments consist in cutting thistles, raking, serving pigs, and bringing the cattle home, and bird-keeping; in the winter, cleaning and pulling, driving plough, &c. Would not wish to prohibit females doing light work. The boys require to be kept at school later; they forget everything they learn. Thinks the Factory Act quite inapplicable, and the Workshops Act little better, for boys will speedily forget what little they have learnt in six months. "I would suggest that children should be kept at "school until they are 10 years old, and after that "by all means to get them back to evening schools "in the winter months, until they arrive at the age "of 14." Evening schools are an admirable institution, and the only way of keeping up what has been learnt.

"Three or four miles are too much for boys to go "to work." There is a great want of cottages in the parish, and some boys come from Frome. Some labourers come all the way from Cloford, four or five miles, to work on Ashby's farm. Ashby has no cottages on his farm. Crees is the only farmer in the parish who has sufficient. "There can be no "doubt that the faulty and miserable construction "of many old cottages is very injurious to the health "and comfort of the labouring poor." They are small, and never have more than two bedrooms, which in a large family is not enough; there ought to be at least three, and the rest of the cottage sacrificed to it; but there is no reason, as people seem to think, that all cottages should have three bedrooms; some ought to be built larger than others. Recollects how a very large family was brought up in the cottage under Gaer Hill, and turned out badly; also a widow with a large family in Marston; her sons are receiving good wages, but send her none of it, so she has to live on charity.

"I have found the farmers very willing to pay a "per-centage on the cost of the construction of cottages "sufficient for their farms. This may be done by "charging a per-centage sufficient to repay the landlord "in 25 or 35 years, or by burdening the next heir with "a proportion of the cost of cottages on each farm." Does not see why the living landlord should bear the charge of building cottages; thinks it ought to be charged on the estate. The garden ground is good, and the rent moderate. The owners are "the "landowners, who are considerably more kind and "considerate than tradesmen to cottage tenants." Improvements in cottage accommodation are being made, but slowly.

272. *Mr. Crees*, occupier, Marston.—Farms 300 acres of vale, all grass except 25 acres. Pays better, as ground wet and heavy, and it is impossible to sheep it. It is a fair specimen farm in the vale. (Lovell's sheep even on Mendip had a good deal of foot-rot.) Farmer Crees only employs one woman all the year, if weather good, at 6*s.* a week (men's wages about 12*s.* a week). She only does light work, such as raking hay, cutting thistles, no hoeing or weeding. It does not generally pay for women to work, particularly if they have children to look after. Lord Cork has two women employed in his garden, and one of them has four children. Farmer Crees only employs one boy, and he goes to school by day, only working in morning and evening at driving cows, milking, &c. Mr. Boyle does not like the boys to go to work early, as they cannot go to school in that case. Mr. Pulham (schoolmaster) says this one is a bad'un to learn.

273. *Mr. Phippen*, occupier, Vallis.—Farms about 300 acres in three parishes, under Lord Cork. Mostly grass, but has more corn than some neighbours. This he is diminishing, as country does not do for sheep, who breed staggerers. He employs two women in light work, such as cutting thistles, raking hay, and another in the house. Has but one boy under 12 in his employ.

274. *Mr. Compton*, occupier, Marston.—Farms 300 acres odd under Lord Cork. About half arable, half dairy. Employs three women, as Mr. Croome, and two boys, age 13 and 10. Neither have ever been to school.

275. *Mr. Croome*, occupier, Manor House, Nunney.—Farms 400 acres, of which only 80 are arable; he employs only three women and two boys. All the boys have been to school; two go sometimes now, and one attended a night school last year. They come from Cloford. His youngest boy is 12. Of course gets boys for a short job sometimes, such as crow-keeping, potato-setting, &c. The usual work of his boys is weeding, leading the horses at the plough, stone-picking, &c. The women do much the same work, and work pretty regularly for him all the year. He has far more corn than any one else near Nunney. His farm is at the back of Nunney, and the land light, having been a good deal of it old common. Mr. Theobald is his landlord.

276. — *Marsh, Esq., M.D.*, Nunney.—The condition of the cottages in Nunney is very bad. There are many very small, with only two rooms, and much crowded. In Mr. Selk's cottage he lives with three or four children in two rooms. Cannot say, however, that ill-health is produced, except in times when there is an epidemic going about. The parish is morally in a very bad state, most of the bad characters from neighbouring parishes settling there, and it becomes a sort of receptacle for such. Knows several instances of men living with other men's wives, and the proportion of illegitimate children is very large. The bad moral state he attributes to the crowding in the cottages, and the want of visiting, for the rector never visits. The landlord (Mr. Theobald) has no home at Nunney, and takes little pains to improve the cottages. There are quantities of idle children always about, and many of them have never been to school. In fact, but for Turner's charity, Mr. Marsh thinks there would be little schooling at all. Turner's charity is worth 400*l.* or 500*l.* a year, and is administered by trustees. They give a schoolmaster a house and 80*l.* per annum. Many of the children are put to school by the charity, and apprenticed from thence. It also provides relief for paupers, which is not pro-

Somersetshire.
Mr. Boyle.
k.

ductive of good, and a lying-in fund. Also in the two parishes of Nunney and Cloford there is annually 40*l.* distributed between the girls married in the past year. At Cloford they do not give it to those who have had a child before marriage; at Nunney they do. Cottages at Ridgway very bad. Women not much employed in the fields, not enough for it to exercise a bad effect on the morals of the village, but the worst characters certainly do go out to agricultural labour.

Mr. Marsh thinks that weeding in wet is very bad for women, and brings on rheumatism. They are not expected to work when it is wet, but many do so for the sake of the money they earn. They earn about half as much as a man.

277. *Mr. Adams*, schoolmaster, Nunney.—In the school there are 45 boys, and nearly as many girls. There are two other schools in the parish, containing, perhaps, 30 between them. There is no night school. One was kept some time ago by Mr. Cotton, a superannuated exciseman, but it is abandoned now. He does not believe there are 20 boys in the parish who do not go to school at all; but, except for Turner's charity, there would be little schooling. The attendance is very slight in the haymaking and potato-setting time.

278. — *Lush*, occupier, Kilmington (population 587; acreage 2,740).—Farms himself 650 acres, of which 150 are dairy. Employs on his farm—

	Children.	Young Persons.	Women.
	4	6	7
Are employed in the parish	16	24	28
Total - -	20	30	35

Of whom 16 are married, 13 unmarried over 18, and 6 unmarried under 18.

Of boys there are 8 employed between the ages of 8 and 10
„ 12 „ 10 „ 13
„ 30 „ 13 „ 18

Total boys - 50

The employments are, for boys, in spring, keeping birds and keeping sheep; for women, in spring, weeding corn and picking stones.

In summer, women haymaking, turning corn, and weeding, and a few assist in reaping; in the autumn, harvesting and spreading manure; in winter very few go out, and they with the threshing machine.

Would not restrict the labour of boys or females; they know how to take care of themselves. Does not consider out-door employment bad for the morals. Matters are changed from what Mr. Lush can recollect. There used to be kissing and pulling about in the hay time, but very little goes on now. Boys prefer going to work to being kept to any discipline. They are obstinate, and like dawdling about and having their own way.

Wages 10*s.* a week for an ordinary labourer; shepherd and carter 12*s.* and a house and garden. Shepherd also gets 30*s.* in lambing time, and 5*s.* for five weeks beer-money. Wives of the labourers can make 4*s.*

The farms are generally well provided with cottages, and few have to go as far as one and a half miles to work. One farmer (Jervis) has no cottages. Mr. Lush has seven or eight fair cottages, but people will crowd them with lodgers and married children. They have no self-respect, and do not mind being crowded, children and married sons and daughters all sleeping in the same room. Few have but one bedroom. Charges 1*s.* a week rent, but for one 1*s.* 4*d.* Gives some free, viz., to bailiff, groom, shepherd, and carter. There is no want of cottages; several are empty.

279. *Mr. Sperring*, occupier, Buckland Denham.—Employs three women, but not in regular work. All are married, as is the usual case; one is 70. Girls do not go to work often. Farmer Phippen employs four women.

Mr. Sperring has only one boy employed regularly under 12. He does not like them under 12. If they are picking apples they eat more than they carry. He has boys on the job in potato-time and apple harvest, and for bird-keeping. The farm is his father's freehold. It is half dairy and half arable. Most farms in the parish are chiefly arable.

Most of the cottages are in the village, and the people like it better. They will not take them much on farms; but the parish is too small for them to have to go far to work, but some go to work at Hardington.

He does not like to have many women, for they chatter, and do no work if they get together.

280. *Mr. Hoddinott*, occupier, Philips Norton.—Has thought on the subject, and thinks no boy ought to go to work before 12. But of course farmers cannot speak up for schooling in their own interest, as a well-educated boy thinks himself above his position, and goes away.

He thinks that a woman working in the fields does injury to her home, not to herself or character. The farmers do not want them, but they are better at work in the fields than gossiping in the village.

281. *Mr. Hoddinott, junior.*—Seldom take boys till 10; has one of 9 employed on the farm; they begin bird-keeping and driving cattle. The sooner they begin work the better. A boy of 13 or 14 who begins cow driving is liable to be timid, and will never get over it; a younger boy will. They learn their work better too. Of course intelligent, well-educated men are best, especially in these days of machinery, but it is a bad thing for a boy to stay at school too long; out of school-hours he gets idling about the town. Men better educated go away to railways or places where they get better wages; a higher class man will not stick to the mere mechanical part of farming, so of course it is not a farmer's interest to encourage education.

The difficulty of the half-day or alternate day system is that there would be relays of boys wanted, and even now there is a scarcity of labour.

Crow-keeping goes on up to December. It prevents boys from being able to go to school in the winter, and takes the younger boys; an objection to the idea of working in the summer, and learning in the winter. Still he thinks that an enactment of some kind is wanted.

His two mowers are intelligent men; they average 16*s.* a week, working by the piece. His ordinary labourers receive 11*s.* and beer. Two-thirds of this farm are arable; Mr. Pike's is half and half, the usual thing here.

Does not want women; thinks them better at home. There are only six employed in the village, and of them only three at regular work. But in case of widows, it would be very hard to stop them going out. They are no worse characters than any one else, and he does not think it generally bad for married women. It is bad for girls, but none work here.

282. Extract from letter from the Rev. G. Mahon, Leigh on Mendip. (Population 534.)

"Let me say that I think few reports could be more important affecting the education of the people than such an one as proposed. The difficulty always is in agricultural parishes to prevent the early employment of our children. It is a fight I am always having with the guardians, and have hitherto, as far as my parish is concerned, fairly succeeded. The difficulty of brick-yards, and top-ground work in coal mines, has not yet been considered; in both cases children under 10 are frequently employed. The Workshop Act does not touch them.

"Yours faithfully,
"George D. Mahon."

Extract from letter from the Rev. James Moore, vicar of Cloford. (Population in 1861, 218.)

"Number of children of the labouring class between the ages of 4 and 12, 33.

Of these on the school books 27 ; at work 3 ; kept at home 3.

"Women are employed in harvest time, and a few other times, but to no great extent, and I do not think their hours are excessive.

"I humbly think that legislative measures would be beneficial which enforced a certificate of reading, writing, and ciphering before a child was allowed to go to farm work.

"The certificate should be renewed each year up to 15. A fixed standard of what is meant by proficiency in reading, writing, and arithmetic should be agreed upon, say third reading book and simple and compound rules in arithemtic.

"I should like to see a further rule that no child should be employed under 12, but whilst wages are as low as 10*s.* and 11*s.* weekly, this would be a hardship to parents.

"Children are sent into the fields at about 8 years old ; sometimes younger.

"JAMES H. MOORE."

283. *Hon. and Rev. R. C. Boyle*, rector of Marston Bigot (population 369).—The school at Marston comprises 70 boys and girls, but a great part of them are admitted from Frome ; only about 25 from Marston, and the same from Tetherington. Mr. Burney has a night school in the winter ; the best attendance about 30.

284. *Rev. A. D. A. Burney*, curate of Gaer Hill. —Knows of a child of 5 who goes out to hold horses, and a boy of 6 years old goes bird-keeping, picking stones, &c. When he asked a woman why she did not send a boy of 7 to school, she said she found him useful at home, hay-making, gardening, &c.

Nearly all the women in the parish work in the fields more or less ; some of them get a winter's work and a summer's work ; they become thoroughly degraded, working with the men, and often doing a man's work ; and meantime their families and homes go to ruin.

The young women are very immoral; from 15 to 16 they take a summer's work, and after that life are not inclined to settle down into service or regular work. They go out late at night, and the mothers resent it if Mr. Burney interferes. Nearly half the children are illegitimate, and women come to be married a month or two before a child is born.

A boy (Wheeler) goes down to Monksham to milk. He has done it for three years ; he is now 16. Distance three miles, and he goes down twice on Sunday.

Another boy goes to the iron mills (two miles). A woman goes down to young Ashby's farm (two miles).

The worst thing of all is the want of regular labour, even among the men, who are often rich one week and out of work the next ; work is intermittent. The fact is, it is a trying time while machinery is coming in ; when once in, work will be regular.

Very few women do not go to work some time or other in the summer; wages are low, 11*s.* is the highest. Some who are regularly employed get a cottage too.

The children come to school well except in hay and harvest time; there are 27 on the books, and Mr. Burney thinks there are none who have never been to school. They forget their lessons when they go out to work, but it soon comes back in the night school.

The cottages are improving ; Mr. Boyle's the best, built by Butterfield. No cottage should have less than three bedrooms, unless intended for an old couple. The cottages used to be mere hovels.

There were formerly two beerhouses ; two people, women especially, used to come from villages near and hold free fights. Beerhouses now abolished.

285. *Rev. Mark Warburton*, rector of Kilmington (population 587 ; acreage 3,470; cultivation mixed). —Would prohibit female labour altogether, except at hay-making, as he regards it "highly prejudicial "to morals, and subversive of all regard for domestic "duties." Would wish to keep boys from farm work till 10.

Formerly Kilmington had a very bad name, and many of the children were illegitimate; such children were much less well-cared for than the others, and left about at the street doors instead of being sent to school. The farmers used to set the example of immorality ; and he believed it mainly due to the baneful custom of women working in the fields. Some of them work regularly all the year round ; he had gone to 20 cottages in an afternoon and found 12 of them locked up, and the women gone to work. If remonstrated with they appeal to the lowness of wages, and what more can be said. Another evil is they often leave an elder child in charge of the babies while they go to work, and so that child is unable to go to school. Mr. Warburton has to support the school almost alone ; he incurred much odium by abolishing the Sunday school when he first came ; but he found that the people made the sending them there an excuse for not sending them in the week. He has a night school ; but he considers its advantage an open question, as it is open to the same objection as the Sunday school. Most of the land belongs to Sir H. Hoare, but Lord Ilchester, Lord Bath, &c. have some. Sir H. Hoare's cottages are in hand ; but most of the rest are held of the farmer, a very bad plan as the farmer cannot afford to repair them.

"The gardens are good, but the cottages are bad, neglected alike by landlord and tenant; rent high and accommodation small ; walls and floors in ruinous condition, and sadly wanting in cleanliness."

TABLE of children, women, and young persons employed in agriculture in the parish.

There is an evening school open 14 weeks in the year, from November 1 to February 1. Reading, writing, and accounts are taught ; the principal diffi-

Somersetshire.

Mr. Boyle.

k.

culty attending it is the irregular attendance at day school in former years.

On the register 21, of whom four are under 12, 17 above 12.

Average attendance 13, of whom three are under 12, 10 above 12.

The difficulty is to make the boys read; they can write, but that is mechanical, and are not bad at accounts.

286. *Rev. J. L. Carrick*, vicar of Witham Friary (population 581; acreage 6,000; chiefly pastoral (dairy farms) with a small quantity of arable land).—The school is almost entirely supported by the farmers, who have a voluntary rate for the purpose; they are a sensible set of men, and wish the boys to go to school. However, the boys, as elsewhere, are taken away very young, and sent into the fields at 6 or 7 years of age; a case of a boy 5 years old nearly run over by a horse he was leading came under Mr. Carrick's notice the other day. The wives are expected to go out with their husbands in busy times; their wages are only 4*s.* 6*d.*, but of course that is an object. About 20 women work out in the parish; all married. "It might be prohibited, except "at hay and corn harvest. It causes homes to be "much neglected, and the women themselves admit "that in the end they lose as much as they earn "for this reason."

The work for women and boys consists—

In spring, in weeding, hoeing, and bird-keeping.

In summer, in harvest work.

In autumn, in hoeing, weeding, and cattle-tending.

In winter (few women), only in bean-planting.

The total of boys working in the fields is 53; three from 8 to 10, 24 from 10 to 13, 26 from 13 to 18.

Would "recommend attendance at school for at "least six months in the year be required of all "children below 13. Do not know of any children "except little infants, neither at school nor work, "except some of the girls who are kept at home to "mind the baby." There are 12 males and 10 females (about) growing up unable often to read at all, and ignorant of the most ordinary matters.

"I myself generally teach the young men, who come "to my house in November, December, January, and "February for two evenings in the week from 7 to "9." Scholars number 23, average attendance 18; none admitted under 12. The difficulties in the way are the want of teachers and the fatigue of the boys, who have sometimes to be told to go and lie down and sleep.

Approximate Number of children attending the day school.

"Very much has been done by the Duke of "Somerset in providing good cottages. Some, I "regret to say, have been so accustomed to inferior "dwellings that they do not always appreciate their "better accommodation; nor does the improvement "always raise the moral standard." There is little crowding. "The cottages, such as are of the better "class, have at least one good living room (some "have a second small room), with convenient back "room for cooking, washing, and also generally a "small back-house. Three bedrooms of good size "where the family requires it. For single persons, "or those without children, there are smaller cottages. "There are bake-houses for the use of sets of cot-"tages. The water supply is not good, and in some "instances better arrangements are required for the "privies. The only proprietor is the Duke of "Somerset. Much has been done, and much is now "in hand."

287. *Rev. R. W. Church*, rector of Whatley (population 221).—A strong boy is taken away from school at 8, to keep crows, for six weeks in the spring, and the same in the autumn. At 10 he is allowed to leave school, and generally gets some light work on one of the farms; all the work they do when they first go out is light, such as cow-driving, keeping sheep, &c. The parish is nearly all dairy.

Mr. Church has a night school, which he encourages boys to come to after leaving the other. The attendance is good, but apt to dwindle towards January. Stupid boys go to sleep after work, but not generally the case. In 1867 he had 13 on his list, and the average attendance was nine, dwindling in February to six. They are only charged for lighting the school. Mr. and Mrs. Church teach. There are men of 23 and 21, the rest boys down to 10.

Few women are employed in the fields, only two as a regular thing; there is a strong feeling against it, and they are not the best characters in the parish; both are strong and have no ties at home, but they are not put to hoeing or weeding. One is a widow, and the other married. Two girls go out for odd jobs, one of 15, who is called the garden-girl, and goes to weed gardens in the village; one of 12, who goes out to assist her mother picking stones. Formerly women were much worked, and the old women recollect breaking stones, and working with the men.

288. *Rev. W. D. Furneaux*, rector of Berkley (population 386; acreage 1,800; two-thirds grass, the rest arable).—A small parish, with no village, and the cottages mostly on the farms; the only disadvantage being that it is so near Frome; many of the people who work in the town take cottages to the exclusion of the farm labourer. The cottages have been improving for some years, and are now generally very good. Nine out of ten belong to Sir Charles Mordaunt; rent 30*s.* to 60*s.* a year.

Very few women are employed, and it is difficult for the farmers to get as many boys as they want, so that the Factory Acts would never answer. In summer and spring, boys are employed in bean-dropping, potato-setting, and bird-keeping. In autumn, harvest and "acorning;" in winter, in general work.

289. *Rev. S. L. Sainsbury*, rector of Beckington (population 1,036). Beckington is a rectorial manor.—Has a well-attended school, but no night school; does not think there are any boys who do not go to school. Has 18 cottages in his own hands, and there is no overcrowding, as the population is diminishing, and there is lots of room; some cottages have been lately pulled down. There used to be cloth manufactories, but that has disappeared, and now there is only one factory, a dyer's, which generally takes the best and most intelligent hands, the wages being higher, the ordinary men remaining at agricultural labour. The parish is compact, 1,800 acres, so that though there are few cottages on the farms, the people in the town have not to go far to work. Women very little employed in the fields.

290. *Rev. H. B. Burney*, vicar of Norton St. Philip (population 625; acreage 1,500; chiefly pastoral).—Considers this a very favourable specimen of a Somerset village, but most in this neighbourhood are so. The cottages are fair, but the population is diminishing, and there are about 30 empty; they belong mostly to tradesmen.

No girls work out; about nine married women; it is "prejudicial to the formation of domestic habits.'

The children left at home wear out more than the parents earn abroad. The work in spring consists in weeding, in autumn rooting out, in winter dressing land.

The number of boys working in the farms is 19, of whom two are between 8 and 10, seven between 10 and 13. Thinks they ought not to work under 10 years of age. "No child under 11 years of age should "be allowed to be employed by a farmer who does not "present a certificate of his having passed the third "standard. There are 50 persons, 30 males, 20 "females, growing up with insufficient education."

Summer - -	23	11	34	25	13	38	72
Winter - -	23	13	36	25	15	40	76

In average attendance.

Summer - -	22	9	31	23	11	34	65
Winter - -	23	11	34	24	13	37	71

There is a night school open 16 weeks in the winter twice a week, two hours at a time, at which reading, writing, and arithmetic are taught. The difficulties in way of its success are want of teachers and funds. The total on the books is 37, of whom four are under 12, and 33 above 12. Average attendance is 24, of whom three are under 12, and 21 above 12.

291. *William Roberts*, schoolmaster, Philips Norton.—The infant school is the best attended; the children come as young as 18 months or 2 years.

Some boys go to work at 8, but the majority a little older. They are much kept at home to carry their parents' dinners.

There is a large night school, half of the pupils of which are over 18; the eldest is 24.

At the day school there are about 40 on the books and 30 infants.

292. *Rev. Charles Down*, rector of Hemington (population 449; acreage 2,794; cultivation mixed).—A large scattered parish, owing to which weather interferes with the attendance at school. There are on the register of the school 35 children, 15 boys 20 girls. In average attendance 32 children, 14 boys 18 girls. There is a night school open from October to March two and a half hours two nights a week, at which reading, writing, and arithmetic are taught, as well as the Holy Scriptures; attendance last year 18.

Ten women work out in the fields, of whom two are girls under 18, the rest married. "I should say that "no young female should be employed in field work," nor boy under 8 years of age. There are 21 boys employed, of whom six are under 8, four between 8 and 10, five between 10 and 13, six between 13 and 18; they are principally employed as carter boys; also in weeding, driving cattle, &c.

"A few of the cottages in this parish are old and "inconvenient, and in two or three cases are over-"crowded; which, I believe, has an injurious effect on "the morality as well as on the comfort of the in-"mates." They have good gardens; most belong to the landowners. Rent 4*l.* to 5*l.*

293. *Rev. H. Clutterbuck*, vicar of Buckland Denham (population 459).—There are from two to four women employed on every farm in this and in the parishes beyond (Hemington and Hardington); not regularly, most of them, but going out by the job. They do a good deal of work about the farms; he himself saw a woman thrown off a thrashing machine. She said she went up it because master asked her. All the women employed, except one, and she is deformed, are married or widows. It does no harm to their character; the objection to it is that they go out and leave their homes, often leaving a child to mind the baby who ought to be at school. At bird-keeping, potato-setting, apple harvest, nearly all the boys in the school from 9 and upwards go off to work. They do not consider them much good under, and eat as many apples as they gather. It is very hard work for the schoolmaster, as they forget most of what they have learnt, and it is beginning over again. He has often had to teach the same boy the elements of reading and writing three times. The rest of the year the school is well attended. There is a night school in the winter, and a Sunday school makes up some of the lost ground. Mr. C. does not think the Factory Act would work; is inclined to think that most will be done by forcing the boys not to go to work till they have a certificate of a certain proficiency; but this must be renewed, as they are liable to forget again. They hate reading, and learnt it with difficulty. At writing and arithmetic, as more mechanical, they are cleverer. The farmers prefer the more intelligent workman, he understands machinery better. On one of the farms the other day the farmer went in and found they had put weights on the safety-valve to stop its noise while they were at dinner; in five minutes more they would have been blown up. Wages, 10*s.*, for carters 12*s.* The cottages, having been on lives, are improving. When Sir Henry Strachey sold the property it was mostly bought up by the farmers, and the cottages belong a good deal to middle-men, who seem to make it pay, but are liable not to spend money on repairs.

294. *Rev. C. A. Oak*, Road (population 663).—There is no National school at Road, but a capital Wesleyan one, endowed about 30 years ago. Children who do not go there go either to Road in Wilts, where Mr. Peacocke has a capital school, or to Wolverton, which is joined with Road, and is a very small parish. The school there has 15 on its books. The rector of the two parishes (Mr. Glossop), who is 87, lives there. There are hardly any boys who have never been to school. There is no Sunday school, but Mr. Oak, who has only been here six months, intends to establish one, as well as a National school. There are a great many dissenters in the parish.

The boys begin bird-keeping at 8. He himself farms a little, and employs a small boy.

Women are very little employed in the fields; those that are bear a good character; it is only women from towns who work in the fields that are bad.

The cottages are good, and have good gardens.

295. Rev. E. Peacocke's school at Road, Wilts.

Absentees at work:—

J. Howell, getting in cows.

Parrott (9), helping his mother in the fields.

Edward Blake (12), working at Beckington.

Henry Broadway (8), haymaking with his mother.

No girls ever work in the fields, and the women, as a rule, won't go there; the wages are good, and they do not find it necessary.

Has one boy of 15 in the school only; the next oldest is about 11.

CLUTTON UNION.

296. Extract from letter from *J. Hippesley, Esq.*, Stoneaston, to *Sir E. Strachey, Bart.*:—

In answer to my questions Whitaker says that boys of *all ages*, from 10 and upwards, are em-

Somersetshire.
Mr. Boyle.
k.

ployed, but that there are very few. Except in haymaking times there is enough of adult labour for the work of this an almost non-cereal growing district.

Whitaker does not know a single farmer who employs a girl out of doors.

Eight hours is the normal period of women's work; but of them, except at haymaking time, there are very few employed in agricultural labour.

297. — *Coulthurst, Esq.*, Chew Magna. Farms between 300 and 400 acres at Chew Magna Believes the boys are very idle. Has one very clever intelligent lad of 15 in his garden, who has a great dislike to learning anything. Employs about four boys and as many women. Bird-keeping is really necessary; he has known rooks dig up a whole ridge of potatoes just planted, and devour every one of them. Thinks the people of Chew Magna a very idle set.

298. *Mr. Stallard*, occupier, Stanton Drew.—Has 80 acres of arable out of 260, a larger proportion than usual.

Boys begin keeping birds as early as 7.

He gives his labourers 10*s.* and a house; carter, 12*s.* and a house; in summer all have 2*s.* more, besides cyder and lunch. Mowers and reapers work by the piece.

Wages have risen in consequence of the railway coming.

The boys go to school in winter.

He has a family, father, mother, and two boys, all working for him. Girls do not go out to work, but do not go to school any the more for that.

In summer nearly every man's wife earns 1*s.* a day; in winter, 9*d.* It does not degrade them in any way; they are very poor. The prices asked at the small country shops are very high. Has heard men say that if their wives do not work they will not support them, they must go to the parish. They do not work when the weather is bad.

He employs more men than most farmers; as many as six in constant employ.

299. *Mr. Fear*, occupier, Stoney.—Employs boys of from 10 to 11. Has one at present bird-keeping, and one in the house. He has seldom more than one bird-keeping. Gives him 4*d.* per day. Would not restrict the age at which boys begin.

Employs two women in weeding or haymaking for, perhaps, five or six months in the year, chiefly summer months. They go out very little in winter.

Never employs girls. They never begin to work young.

Boys are kept at school too long in this parish. They come to work when too old to learn their business, and are above their position. Schooling should not be carried too far; to read and write is enough.

Girls are kept at school till they are 14 or 15, and then they will not be farm servants; and even if they do not go to school stay at home, and learn idle habits.

Mrs. Veale's children are at home, running about the streets. Is going to call a vestry about it, and hopes Sir E. will come.

Rooks do the principal damage to seed, and wood-pigeons, but there are few of them; jays do some, but keep mostly to the woods. Small birds do little damage. Has a boy now keeping the rooks from four acres of peas. Bird-keeping is a necessity.

300. *Mr. Veale*, occupier, Denny (saw his nephew).—Farms about 58 acres. Employs one boy and one old woman regularly. Does not think many are employed about, and those with large families and widows. Mostly dairy, and has no bird-keeping.

301. *Mrs. Veale*, Stoney.—Goes out to work; dresses ground and weeds. Leaves her daughter at home in charge of the house. She has no regular work. There are three bedrooms.

302. *Mrs. Mapstone*, Stowey.—Used to go out to work, but has three young children, and does not now. Three bedrooms, but only uses two, as family small.

303. *Mrs. Hoddinot*, Stowey.—Has five children at home. Three bedrooms upstairs. Used to go out to work, but it is a bad thing to leave children at home alone. Washes now.

Has a boy of 10 at regular work, but he is out of work now. Was at school up to 10.

304. Cottages at Stoney. Extract from Diary, July 13, 1868.

Went with *Sir E. Strachey* to see some of his cottages. He rather complains of the low state of morality. One, Mrs. Veale, who we went to see, and who married Mr. Haines, gardener, from service, had had a child either immediately before or after marriage, and was considered no worse in the village; she seemed a quiet respectable sort of woman. Women very often marry when the child is just going to be born. Sometimes the man refuses, but, as a rule, he marries her. Saw some cottages belonging to *Mrs. Stallard*, wife of Sir E.'s old butler, who, of course, has no money to keep them in order. They were, however, better than I expected, though each only two rooms, above one another. *Mrs. E.* lives in one, with her husband and four children. Does not bear a very good character in the village. Used to go out to work, leaving her children at home, put to sleep by a basin of poppy flowers! Sir E. had two cottages there, which each had four rooms, so were better; but in Mrs. Stallard's they were all families of small children, so there was no excessive crowding of young men and women.

305. *Rev. Horatio Ward*, rector of Radstock (population 2,227).—A large and increasing parish, owing to the mines. The cottages are generally good. Lady Waldegrave, to whom it all belongs, has just added 40. The women work very little in the fields, and such work ought to be put a stop to, as it degrades them, and people do not like having them in the house; but generally men and boys get such good wages in the mines, that it is not necessary for women to work at all out of doors. A boy of 17 will earn as much as a man in the coal mines, for they work by the piece.

306. *Schoolmaster* at Radstock.—There are not 12 boys employed in the fields under 12. Most of them go as soon as they have a certificate of competency in the three R.'s to the mines; but there are many boys who do not, and have never been to school, but simply idle about the place; he would say half as many as come to school.

The number on the school books is 203, of which 173 were at the inspection; 128 is the average attendance. He should remark that many have left in the current year after having attended, and supposes that 400 at least have been to the school who are now no longer on the books.

A night school has been often tried, but failed; the men do not like seeming to know less than the boys, and to be laughed at by one another at the pits.

They have a difficulty in learning arithmetic.

When the Acts to ordain that no boy who could not read, write, and figure should work came out, there was a difficulty at first what standard of reading was sufficient; he has settled it here at words of two syllables.

307. *Rev. R. S. Savory*, rector of Cameley (population 526).—Has a very good schoolmaster. No boys go to work under 12, but the farmers come and complain much sometimes of high education, which prevents their getting young boys to keep crows. Thinks no legislation necessary, but no harm in settling an age before which they may not work. Hardly any women work in the fields in the parish. Does not like their doing it at all, but very hard to forbid them, in the case of widows for instance. Only about three or four work, and they not regularly.

309. Extract from letter from *Rev. R. S. Savory*, Cameley:—

"Cameley, Temple Cloud, Bristol,
"Dear Sir, July 11, 1868.

"There are a few observations upon the statistics you are seeking for I should like to have made

last Thursday. They refer to both women and children; but as to the latter I do not feel so sure, because though I am inclined to think that on the whole it would be as well to let them alone, yet it does seem hard that they should work before 10, especially if they can neither read nor write. As to women, however, I can see nothing but evil resulting from any interference with their working. 1st. I believe it will be very bad for themselves, making a number of strong, hearty women, with strong passions, idle, and worse, and interfering with the appointment of One who is much wiser than we are. But, 2ndly, suppose on the whole it does good to them, it throws a tremendous evil upon others; for there is a certain amount of work to be done, and there are a certain number of people to do it; if you abstract some from the work, you throw so much more work upon the rest, so that kindness to some is cruelty to others; and even if you say, if they work they shall have a certain wage, you don't mend the matter, at least not much, for there is a certain amount of money to be spent in wages, and if a person can't employ five he will employ only four. Take any one case; we are what may be called moderately well off; we have a certain number of regular servants, but if we have a little pressure we never hesitate to employ a woman from the parish. I believe it is a great blessing to her, but if her charge was higher, we should simply do without. I believe all attempts to raise wages otherwise than by the demand regulating the supply must end in failure, and produce more evil than good. If people demand higher wages, there will certainly be fewer employed, and is not the present state of things in England an evidence of this? You don't see it in country places, because people flock to the towns; but what numbers are out of employ there, 10,000 in Bristol and Clifton unions at present. If you try to raise the wages by which food is supplied, there will again be a double evil, for food will be produced *less* in our own country, and the price will be higher, and if a man can buy as much for a shilling as he can for two, where is the good of an increase of wages? There is a great deal more might be said, as, for instance, the curious anomaly that seems to be getting ground, that while we are saying that women shall not work, ladies shall. Everywhere are ladies beginning to recognize what, I believe, is their happiness, and to enter into the law of work, whereas a spirit of idleness is creeping into the lower orders, and their cry is more pay and fewer hours. I won't, however, take up any more of your time, but conclude by saying I only wish that people could put out of their heads the impression that change is improvement.

"I am, &c.
"R. S. Savory."

309. *Rev. E. F. Johnson*, rector of Hinton Blewett (population 302).—In this place the school is disappearing very much; there are only 25 children on the books, and but a small proportion of them come; a good many go to school at Cameley. Government gives no aid; the present system denies all aid to poor places like Hinton. There are two small dames' schools; many of the children go out to work very young. The women work much with their husbands, and quite right they should, where wages are so low. Wages vary from 9*s.* to 12*s.* The population is diminishing much. Mr. Johnson himself had five cottages on his hands the other day. This makes house-rent low, which is one of the redeeming features of the place; you can get a good cottage for 1*s.* a week. But there is no landlord of any means to spend money in the place; no one owns more than 150 acres in the parish, and they stare if asked for 5*l.* towards the school. Most of the farms are small, 30 or 40 acres, and the farmer's family aid in working it.

310. *Rev. Robert Haynes*, vicar of Stowey (population 181).—There are in the parish only about 12 families altogether, and four women only work in the fields. The women weed, hoe, and pick stones; he considers weeding up to the knees very bad for their health, and the employment generally demoralizing. The best men will not let their wives go out, but the drunken and idle find it a great assistance. Mrs. Lodge, who was a respectable young women, having married, and having a child every year, goes out in the fields to assist them, leaving her children at home in charge of a lodger. Their manners become like a man's from working with them, and she is much spoilt. Besides, they get into a way of going to the public house with the men, not drinking much, but staying from 6 to 11, sipping and making a noise. They are thirsty after work; they do not care so much for their children. One woman went down to get drink, as she said if she left her husband there he had it all, if she went down she had her share. It ought to be put a stop to, women working, except, of course, that of widows would be a hard case.

The cottages are much improving, and are good now; most with three bedrooms; but people do not care much about it. In one three-bedroom cottage a large family lives down in a lower room, leaving the others empty, and when expostulated with, said that the children were afraid of ghosts.

Early work destroys the *health and morality* of boys. They get out in the field at 7 or 8 years old, and have a little hut of four hurdles and a bundle of straw, and dawdle away their time; then if, when it is over, they come back to school, they have forgotten everything, and will not take the trouble to learn it over again. Most of the girls leave school too at about 13 or 14, and wish to get into service, nursing children or servants to tradesmen in Bristol. They have tried a night school several times at Sutton, but it always lapses in time; one great objection is that the boys of 14 know more than the men, and the men hate being beaten by them; besides, they are very open to ridicule, and if chaffed about mistakes made will not come again. They find it very difficult to read, harder than to write; but they forget their writing again, and many men cannot sign the parish register. Is in favour of compulsory education, and approves of the half-time system. If farmers were not allowed to employ the boys more than half the day, they would fall into it, and comply with necessity of having two relays. Of course it would be an unpopular measure. Yesterday they sent for to the examination a girl who they had nearly been sending up for examination as a monitress; she had been out at service six weeks only, and it was astonishing how much she had forgotten.

311. *Rev. Wm. Wait*, rector of Chew Stoke (population 758).—Boys work little under 12 years of age; women make hay, plant potatoes, &c. Mr. Wait has built a capital reading-room for the parish, but has been much disappointed in its being a failure, as very few ever come. Admission was given to any one in the parish on his subscribing 5*s.* to one of eight societies in which he was interested, and it is used for concerts, readings, &c. The cottages are usually good, but he mentioned a case of one under Blackdown, where 10 used to live in one room; that was, however, an exceptional case. Every facility for education.

312. *Rev. E. A. Ommaney*, vicar of Chew Magna (population 1,855).—Has himself a good many cottages held of him by copyright tenure, which are very difficult to get hold of and improve. Women work a good deal in the parish, which is a large one, but they are of little good. The people generally are a lazy idle set, and like dawdling about the parish. They are very proud of belonging to Chew; much of it is due to continual intermarriage. Some of the cottages are very bad, particularly some 19 or 20 belonging to Mr. Adlam, where large families are huddled together.

313. *Rev. C. H. Nutt*, vicar of East Harptree (population 651; cultivation chiefly pastoral).—The people are a rough lot, hardly knows why, but attributes it much to local influence, force of bad example.

Somersetshire.
Mr. Boyle.
k.

There was an unenergetic clergyman there before him. There is, however, a good deal of education, and it has been called in the neighbourhood young Oxford. There is a fair National school, and a large British school. But the latter is rather a disadvantage, as it prevents the children coming so much under the eye of the rector. It is a great stronghold of dissent.

It is difficult to interfere with children going early to work. The parents require their earnings where wages are low, and the supply of labour is in excess of the demand, that to apply the Factory Act would amount to prohibiting the labour of boys altogether.

A great many women go out to irregular work, few are regularly employed; but they go on the job, weeding and hoeing.

The state of morals is bad, though the women who work in the fields are no worse than the others; several women in the parish have had children before marriage.

There being no squire, many of the cottages are very bad, and some mere hovels, with large families living in two rooms; of course it has a natural effect in a loss of modesty among the girls. The girls mostly go out to work at the farms and elsewhere; but Mr. Nutt considers the sights they see among the beasts even as conducive to a loss of modesty. Since he has been in a rural parish, he has had his ideas of arcadian simplicity very roughly dispelled.

314. *Rev. Charles Foster*, rector of Compton Martin (population 558).—The curse of this place is the small holdings, which are found much along this valley. The farmer and his family are enough to work a small farm of 40 acres, and there is no work for labourers. Besides, there is a want of capital, and no one rich enough to do anything for the poor.

The men go up to work at the lead mines on Mendip, but not the women or children.

The state of morality is very low. There is a girl going about in the village, well dressed and taken care of, who has had a child by a Bristol man, and her parents are anything but ashamed of it, while she is envied by the neighbours.

The cottages are very bad; the squire never repairs them, but lets them go to ruin, while he turns out any one who improves on his own account.

The children are taken away very early to work, and forget everything. A night school was attempted but did not last long. Mr. Foster had to teach it himself. The young men thought they were doing him a favour by coming, and he had to work separately with each, as their attainments varied so that it was impossible to classify them.

Mr. Foster considers the chief signs of the degradation that prevails in this valley, that the people see no use in education, and believe in witchcraft. If anyone has a fit or the cow gives no milk, they consider they have been overlooked, and send to the wise woman in Bristol. The older people themselves are utterly uneducated, and do not see why the children should be better off than themselves.

The women go out very little to work; they are better at home.

Most of these remarks apply to Blagdon; but it is better there, as they have an active squire, Captain Valpy.

315. *Rev. Samuel Trueman*, vicar of Nempnet, (population 259). A scattered parish, covering an area of nearly 1,800 acres. "15 labourers' children be- "tween the ages of 1 and 10. Circumstances good, "morality low, but equal in my opinion to the "morality of the farmers as a class. Content and "fairly remunerative employment in manual labour "is the chief temporal good for the labouring class." Children are usually employed "from about 9, in the "care of boys; a great demand for even incapable "men and boys. Women prefer field labour to "housewifery; they cannot sew or darn. I should "say they do not hurt themselves. Field labour "engenders unfeminine habits, tends to make the "female sex generally loose; breeding in and in "very prejudicial. Compulsory education is, in my "opinion, injurious. I would confine it to the merest "rudiments. We want industry and morality.

"Twenty-two labourers' cottages, some of them "their own freeholds; the supply of labourers below "the demand; competent labourers fewer still; high "wages. With ordinary good management and moderate thrift every one (man, woman, and child) in "the labouring class would be very well off; the "poor-law allowances very liberal, but the poor-rate "vastly in excess of any benefit, and all the benefit "that is desired. The paupers get a very inadequate "portion of the extravagant amount collected. The "present poor-law system works most laboriously, "expensively, and to a large class of struggling, "deserving people almost ruinously, certainly injuriously. The huge workhouses, with their absurdly extravagant machinery and arrangements, "are an enormous evil, a grinding oppression. What "is given in *out-door* relief is ridiculously disproportionate to the levies raised.

"The number of labourers' children above 1 year "of age and under 10 years of age would average "about 15 (stands at that now); there are available "for these and have been actually made use of, four* "National schools (Butcombe, Ridge Hill, Blagdon, "Chew Stoke), and one private school (at Butcombe), and one that partakes of the mixed character of national *or parochial*, and private (Ubley), "within distances more or less convenient, and at "payments ranging from 1*d.* to 3*d.* a week for each "child.

"Any wear or tear arising to the children's clothes "from exposure to weather is amply and abundantly "met by a charity equally distributed each half-year "*in money*, subject to strict printed rules (which "are scrupulously observed), between the labourers, "their wives, their children over 1 and under 10 "years of age, and the old people and imbeciles, and "paupers *resident in* the parish, and having in time "past been householders; mere lodgers (*e.g.*, young "men till they marry) are ineligible. Thus, a family "of six would and do receive 3*l. yearly*.

"I believe the poor-law system is very demoralizing "to the class which it is (benevolently) intended to "help and benefit. I would have it abolished, extinguished, and I would remove all incentive and encouragement to this kind of dependence.

"We pauperise, and induce degradation along with "indigence.

"Red-tapeism stimulates, nurtures, and fosters a "great deal that is necessarily inevitably evil, and "that admits of only at the best imperfect and very "partial remedies. I believe the late Dr. Chalmers "had more insight into political economy than many "of our statesmen and so-called reformers."

Bedminster Union.

316. *Sir William Miles, Bart.*, Leigh Court (parish of Abbots Leigh; cultivation mixed, two-thirds arable).—Boys are employed from 9 till 13 or 14 bird-tenting. "Boys from my school are employed during "the spring and summer with the schoolmaster in "spudding thistles, pulling docks and charlocks, and "weighing mangel-wurzel in fine weather." They ought certainly not to be employed before 9 years of age. "I have a school at which all children in the "parish have a right to admission. One child pays "1*d.* a week, any number of the same family 2*d*; "besides which, upon application, I take in children "not belonging to the parish." In winter the schoolmaster opens an evening school for the young men, which is attended regularly by 12 to 18.

Girls never work out. "I used to employ two "women, but for some years have employed none "except for occasionally picking charlock. Within "my recollection the employment of women has "much diminished, which I attribute greatly to the

* Middle-class schools or schools for farmers' children are not noted.—S.T.

" spread of education, and the consequent need found " by the labourer for home comforts."

"Since my occupation I have built several cottages, " all good and not overcrowded. Many of the old " ones have about three bedrooms; they are well " situated as regards their farms, they are well ven- " tilated and adequately supplied with water, except " in such a season as this: owing to the residence of " six gentlemen in the parish, and the necessity of " providing their married servants with lodgings, " I have not enough cottages for the whole of my " farm labourers. Those that have not cottages re- " side at Pill."

317. *Wm. Sturye, Esq.*, land-agent, Bristol.—There is little or no employment of women to any hard extent anywhere in Somerset. There are some employed in the south, for there is more corn there, and about Axbridge, which is a peculiar place, as it is devoted to the growth of early potatoes. The condition of the cottages generally is much to be deplored, and yet there is no way he can see for their improvement. It wants a man to have a large capital to be able to afford to receive so little return for his money, and Somersetshire is a county of small squires. Speculators in cottages only make it answer by charging an enormous rent, and never repairing. The Land Enclosures Commission has been a great failure. They insist on their own plans, and it is impossible following them to build a good double cottage, with three bedrooms in each, under 400*l.* The scantling they insist on is good enough for a large house. He himself can build similar cottages, plain and substantial, under 300*l.* They take 6½ per cent. on the outlay for 22 years, and the man who builds the cottages has to be content to be at a loss all that time, unless he charges an exorbitant rent. There are two or three companies do the same, but of course it is more difficult for them, as they have to make it answer. They charge 7 per cent. for 30 years. In this part of England they find little custom. The drainage of cottages is so bad, often owing to all conveniences being on the same roof or at any rate close to the cottage. A country village is in consequence often far more unhealthy than the town. Can see no way of improving cottage accommodation on self-supporting terms. "The only hope is raising " the condition of the labourer so as to enable him to " pay a higher rent."

318. *Thomas Ward, Esq.*, land-agent to Sir Arthur Elton, Clevedon Court (acreage of Clevedon parish 2,986; cultivation pastoral, grazed one year and mown the next; two white crops not to succeed one another).—No girls or women are employed out in the fields; being so near the watering place of Clevedon, enough washing, &c. is to be obtained to employ them. Boys are employed "from 8 years old upwards, say, four " to six months in the year." They ought not to work before 12 or 13 years of age, firstly, on sanitary grounds, because it undermines the constitution, and often ends in decline; secondly, that they may be able to take full advantage of the means of education, which are ample in the town.

"The cottages are very much overcrowded; people who have a good cottage with three bedrooms will often take in as many as eight lodgers, and herd with their families in the kitchen. It is impossible to build good cottages and make them pay. Built for Sir Arthur, in Clevedon eight cottages of money borrowed from the Lands Improvement Society, at 280*l.* a pair, Sir Arthur's annual loss upon which is 2 per cent."

319. Cottages at Clevedon. Extract from Diary, July 16, 1868:—

Sir Arthur Elton's bailiff came, and took me round to see some cottages. Went first to what he said were bad ones; but beside what I had seen they seemed very good. Mrs. Coles, who had half a double cottage, lived with a husband and eight children. Two rooms above and two below, but spacious. The other half consisted of one room under and one above, and six people lived in it.

Drove on to see some of the cottages built by Sir A. with money borrowed of the Lands Improvement Society. Built in blocks of two each, with small gardens at the back; stone, red tile, and very clean inside. They have two rooms below and three bed-rooms. In the centre block each had an extra ground-floor room at the back. The only objection seemed to be that the privy was in the building, though opening into the outer air. The plan had, however, been approved by an inspector; but the bailiff seemed to agree with me in preferring it detached. There are two fields of allotments in different parts. It is not so good a system as gardens, but seems to answer pretty well.

320. —— *Talbot, Esq.*, principal of the middle-class school (Failand's Lodge).—Considers that I have little or nothing to do in Somerset, and especially in this part. Very few women work, and those mostly of the old school, who go out because they like it, and could not bear to be kept in-doors. But there is little necessity for them now; the men's wages in this part are so much higher (12*s.* to 14*s.* besides drink), and so much of the work that women used to do is now done by machinery. Mr. Talbot farms 60 acres himself. He seldom employs boys in crow-keeping; in fact, though most of this district is arable, he considers that they are not wanted. They are idle and lazy, and do not attend to what they have to do. Crow-twine stretched all over the field is cheaper in the end, and does the work better. The only bird that it does not scare is the pheasant. Pheasants are very numerous just here, owing to there being so many gentlemen's places, and they run in under the twine and dig up whole rows of potatoes. He has seen a flight of small birds alight on a field of corn, and a bird settle on nearly every ear. The soil in the valleys is deeper and richer, and used for pasture; on the hills like this it is much more cultivated; but when Mr. Talbot came himself nearly all this was bare, a great part covered with fern, which he destroyed by sending boys round with sticks to beat it down; cutting does no good, it must be knocked over. The mowing machine certainly does knock down the grass to a certain extent; it does not cut it sharp off like a scythe; but he does not believe it kills the grass. Mr. Talbot does not think legislation necessary as far as Somerset is concerned.

321. *Rev. H. J. Barnard*, vicar of Yatton (population 1,450; cultivation almost entirely pastoral).—No girls and few women work out in this parish. " Very few boys are employed under 14 or 15, and " those generally in the spring and autumn for potato- " digging and planting. I think no boy should be " permitted to do regular work under 14. There is " a National school under a master and mistress, and " a British school under a master. The children " generally attend; when they do not, it is generally " the fault of the parents."

The cottages as a rule sufficient, pretty good, and not overcrowded, except in the case of one or two large families. "There is a great lack of good " gardens, and very little allotment land."

322. *Rev. E. P. Vaughan*, rector of Wraxall (population 918; acreage 3,496; chiefly pastoral, with some arable).—This is rather a pattern parish, as several rich people live here (the Gibbs') and take care of it. Yet there are families who never send their children to school. He thinks it runs in families; there is an apathy about it; the parents never learnt themselves, and do not see the good of it. The women do not work much. Wages are good; but if a boy can make 3*s.* a week it is only natural that his parents should wish to increase it; he told me only to fancy one's own case. If a father has 4,000*l.* a year and his son could earn another 1,000*l.*, it would be hard to forbid him doing it. But Mr. Vaugham is all in favour of an age being fixed. " I should be inclined to say that no child under 12 " years of age should be permitted to be employed in " any agricultural work without a certificate that he " could read without spelling any common book,

Somersetshire.
Mr. Boyle.
k.

"such certificate to be signed by the master and "mistress of the school he has attended, the clergy- "man of the parish, or the minister of the chapel, or "some householder in the parish rated about, say, "20*l.* in the parish book, not being the child's "employer; an appeal as to the truth of the certifi- "cate to be allowed to Her Majesty's Inspector of "Schools, or, in the case of the Church of England "children, to the bishop's inspector. There are good "and well attended schools; but there are certainly "families who take away their children too early "from the school, and many who send them too "irregularly, that they may do odd jobs and pick up "sixpence or a shilling; families in which ignorance "is hereditary." Forgetting is one of the greatest evils. Mr. Vaughan believes that of all the able-bodied labourers who have been through the school, not one quarter can read and write when grown up. This would be an interesting inquiry, though difficult to carry out.

"Girls are scarcely ever employed in any agri- cultural work. Women are employed in hay- making, turnip-hoeing, wheat-hoeing, and in dairy work, and in gentlemen's gardens."

Cottages, "good on some estates, very bad on "others. Few have sufficient sleeping rooms or "proper drainage. I believe many cases of im- "morality I have known may be attributed to this. "Might not the power to recover rent depend on the "certificate of some public health officer that the "house was fit for human habitation? The cottages "have all gardens, with very few exceptions, but "they are not always large enough. We have all "allotments."

323. *Mr. Chapman*, schoolmaster, Abbots Leigh.—Manages to keep some of the boys at the day school till the ages of 13 or 14. Has a night school open from September to March, during which time they come pretty well; about 16 is the attendance, and they vary in age from 14 up to 30 or 40. Do not take boys younger than 14.

324. *Schoolmaster at Clevedon.*—Perhaps one-ninth of the boys go off to work. The earliest age they go at is 8, but few do that. The brick-field takes them very much. They come back in the winter. They are very dull; and those who come so irregularly seldom learn to read. Some few have been to school, and resisted the discipline, so gone away having learnt nothing. Mentioned an exceptional case of a family who never learnt anything when little, but have come since and turned out well. There are 300 children on the books, the youngest aged $5\frac{1}{2}$; on the books of the British school are 150 children.

The night school is very regularly attended, and the scholars seem to take much interest in it; but it is composed chiefly of mason's labourers and young apprentices, scarcely a third from the agricultural labouring class. It is open four nights a week; but it is never much good keeping it open after Christmas; from October to Christmas they come pretty regularly. The attendance is sometimes as many as 32, sometimes 16. The oldest scholar is the foreman at the gasworks, aged about 45.

Answers to the Commissioners' Circulars.

Of the larger circulars I have received 30 filled up, of which 24 were filled up by clergymen; of the smaller circulars 61, of which 47 are filled up by clergymen. Of course there are great differences in the extent and value of the answers, some gentlemen having merely filled up the paper with monosyllabic replies, others having been good enough to furnish me with statistics and particulars that must have cost them a great deal of time and trouble. To these gentlemen I wish to express my gratitude. At the same time I regret very much that I kept no return of the number of circulars issued, but calculate that I received back about two-thirds of them answered. In the following arrangement of answers, the answers to the larger circulars are placed first in order to avoid confusion; those to the smaller circulars follow. There is only one exception to this rule, and that is in the case of the answers to 22 (*m*) in the larger circular and 6 in the smaller. Under the head of 22 (*m*) will be found a table summarising the answers to both questions, which are identical in substance.

ANSWERS TO COMMISSIONERS' CIRCULARS.

6. Does any system exist in your parish of employing persons in agriculture in "private gangs?"

To this question the answer in every circular, except one, that of the *Rev. Mark Warburton*, rector of Kilmington, is a decided negative, and he says, "Yes, but on too small a scale to be worthy of "notice." Kilmington is on the borders of Wiltshire.

Mr. Hancock, who farms largely at Halse, says, In July and August I send out a man into the village to get all the children, boys and girls, he can find to come and single turnips; some come at 9 years. They work in a row, and there is a man to look after them, who tells the younger ones what to do, if they fall behind the others. It is light work, and no unkindness is used.

In these two circulars only is there an allusion to a gang-system.

22.

(*a.*) *Rev. W. P. Anderson*, Winsford.—"One or two women are generally employed on each farm. The children who are employed are in service in the farm-houses, except sometimes for bird-keeping.

Hon. and Rev. F. B. Portman, Staple Fitzpaine.—No girls are employed; boys go about 10 to guide the plough; some stay till 13 or 14. The girls stay on longer at school, but go away at about 12 to sew gloves. They go out to domestic service about 15 or 16 years of age, usually after gloving.

Rev. W. D. Furneaux, Berkeley.—So few women as to be hardly worth specifying. As a rule women are only employed in hay and corn harvests. It is difficult to procure boys in sufficient numbers for the farmers' needs.

(*b.*) Give as nearly as you can the following particulars as to the number and age of such persons so employed.

I have had many complaints of the great difficulty of filling up this table with any accuracy, owing to the uncertainty of the periods and duration of labour for women and boys.

The *Rev. W. P. Anderson* writes, The women are chiefly wives of workmen on the farms. The age of children going to farm service is seldom under 12. I cannot give the exact statistics without making minute inquiries, for which I have not time.

The *Rev. Cyril Wood*, Stogursey, writes, It is impossible to find time to answer this under a month's time.

Even where gentlemen have been good enough to fill up the table, they have complained of the difficulty of doing so accurately, as may be seen in the table

below, in which I have drawn out side by side the statements of the Rev. M. Warburton and Mr. Lush, both of the parish of Kilmington, whose estimates differ considerably.

—	Males.					Females.						
	Under 8.	Between 8 & 10.	Between 10 & 13.	Between 13 & 18.	Total Males.	Under 8.	Between 8 & 10.	Between 10 & 13.	Between 13 & 18.	Over 18. Married.	Over 18. Unmarried.	Total Females.
Rev. M. Warburton	3	5	12	23	43	2	4	6	14	25	15	66
Mr. Lush - -	—	8	12	30	50	—	—	—	6	16	13	35

Subjoined is a table of returns of employment of women and children in six parishes, supplied by the rector or vicar, with the population of each parish subjoined, and the proportion of women and children to that population. The parish of Philips Norton is in the most flourishing district of Somerset; that of Wootton in one of the poorest. The large proportion of women employed in such parishes as Mark is owing to the dairy work.

—	Name of Parish.	Cultivation.	Males.					Females.							Population.	Proportion of women and children employed in agriculture to the population of the parish.
			Under 8.	Between 8 and 10.	Between 10 and 13.	Between 13 and 18.	Total Males.	Under 8.	Between 8 and 10.	Between 10 and 13.	Between 13 and 18.	Over 18. Married.	Over 18. Unmarried.	Total Females.		
Rev. F. Du Sautoy -	Mark - -	Chiefly pastoral -	10	10	20	30	70	—	—	10	20	50 wives of farmers.	50 daughters of farmers.	130	1,217	1 in 6⅓
Rev. Wm. Meade -	Binegar - -	Chiefly pastoral -	1	2	10	11	24	—	2	3	8	2 widows		15	258	1 in 6½
Rev. H. B. Burney -	Norton St. Philip.	Chiefly pastoral -	—	2	7	10	19	—	—	—	—	9	—	9	625	1 in 22
Rev. J. L. Carrick -	Witham - -	Chiefly pastoral -	—	3	24	26	53	—	—	—	—	20	—	20	581	1 in 8
Hon. and Rev. W. B. Portman.	Corton Denham	Arable preponderates.	1	2	12	18	33	—	—	—	—	13	—	13	410	1 in 9
Rev. Charles Sainsbury	Wootton Courtney.	Mixed - - -	—	1	10	12	23	—	—	—	1	30	2	33	350	1 in 6¼

(*c.*) In what kinds of work are they employed during the different seasons of the year?

(1.) In Spring.

Rev. F. Du Sautoy, Mark, says, dairy-work.

Rev. W. Meade, Binegar, says, bird-keeping, stone-picking, dressing ground, weeding corn, potato-setting.

Rev. H. B. Burney, Philip's Norton, says, weeding.

Mr. Lush, Kilmington, says (boys), keeping birds and keeping sheep; (women), weeding corn and picking stones.

Rev. W. Furneaux, Berkeley, says, bird-keeping, potato-setting, bean-dropping.

Rev. J. King Eagles, Hill-Farrance, says, occasionally in weeding wheat.

Hon. and Rev. F. B. Portman, Staple Fitzpaine, says, keeping birds, a few boys, perhaps one on each farm, for two or three weeks.

Hon. and Rev. W. Portman, Corton Denham, says (boys), shepherding, bird-keeping, and leading horses; (women), pulling turnips, weeding and dressing ground, *i.e.*, grass.

Rev. W. P. Anderson, Winsford, says, pulling turnips, planting potatoes, bird-keeping.

Rev. Charles Sainsbury, Wootton, says, picking meadows and weeding wheat.

Rev. Cyril Wood, Stogursey, says, agricultural weeding, ploughing, &c.

(2.) In Summer.

Rev. W. Meade says, dairy, also hay and corn harvesting.

Rev. F. du Sautoy says, thinning swedes and mangold, milking.

Rev. H. B. Burney says, harvesting, haymaking.

Mr. Lush says (women), haymaking, sowing corn, and weeding, and a few assist in reaping.

Mr. R. Porteous says, cutting thistles, making hay, serving pigs, and bringing the cattle home.

Rev. W. Furneaux says, bird-keeping, potato-setting, bean-dropping, harvesting.

Rev. J. K. Eagles says, weeding wheat and spring roots.

Hon. and Rev. W. Portman says, haymaking and weeding; boys used for leading horses.

Rev. W. P. Anderson says, hoeing and hay harvest.

Rev. C. Sainsbury says, haymaking and harvest.

Rev. C. Wood says, haymaking.

(3.) In Autumn.

Rev. W. Meade says, dairy, also hay and corn harvest.

Rev. F. du Sautoy says, potato-digging.

Rev. H. B. Burney says, rooting out.

Mr. Lush says, harvesting and spreading manure.

Mr. R. Porteous says, bird-keeping, &c.

Rev. W. Furneaux says, harvesting and acorn gathering.

Rev. J. K. Eagles says, harvesting.

Hon. and Rev. F. B. Portman says, mazing and keeping pigs.

Hon. and Rev. W. Portman says, harvesting, apple-picking, bird-keeping.

Rev. W. P. Anderson says, harvesting, bird-keeping.

Rev. C. Sainsbury says, digging potatoes and apple-picking, turnips dug for sheep.

Rev. C. Wood says, children in harvesting; women take little part except in gleaning.

(4.) In Winter.

Rev. W. Meade says, dairy.

Rev. F. du Sautoy says, tending sheep and cattle.

Rev. H. B. Burney says, dressing land.

. Somersetshire.
Mr. Boyle.
. k.

Mr. Lush says, attending threshing machine; very few go out.
Mr. R. Porteous says, driving plough, &c.
Rev. W. Furneaux says, general work.
Rev. J. K. Eagles says, pulling roots.
Hon. and Rev. W. Portman says, turnip-pulling, shepherding, serving cattle; but little work for boys or women.
Rev. W. P. Anderson says, turnip-pulling.
Rev. C. Sainsbury says, not much done.

(*d.*) Do they live on or near the farms on which they work?
If not, how far have they to come from their homes to their daily work?

As a rule this question was answered in the affirmative. There used to be some parishes in which cottages were pulled down to send the people into the neighbouring town or large village, but that custom is going out now, and landlords are seeing the wisdom of building cottages on their property.
Henry Davis, Esq., Oakhill.—Most of them live near the farm, but some about a mile away.
Mr. Lush, Kilmington:—Mostly near. In the case of two farms a few women and boys may have as far as half a mile to their work.
Mr. Porteous, Marston Bigot.—No. Frome. One mile and upwards.

(*e.*) What are their usual hours of work upon the land?

For boys the usual rule is the same hours as men, 6 to 6, leaving off with dark, however, when the days are short. Women seldom begin work till 8, and sometimes leave off an hour before the men and boys.
Rev. J. K. Eagles, Hill Farrance.—6 a.m. to 6 p.m.
Rev. C. Sainsbury, Wootton.—Women, 8 o'clock till 5; boys, 7 o'clock till 5.
Mr. Lucas, Wiveliscombe.—Nearly the same as the men, say, they start 1 hour later in the morning; may have half an hour longer at dinner.
Rev. F. du Sautoy, Mark.—Children 8 hours; adults about 9 hours, those engaged in milking; adults about 12 hours, those engaged in agriculture.
Rev. W. Hunt, Congresbury.—About 12 hours; varies according to light.
H. Davis, Esq., Oakhill.—From 6 to 6, except in short days.
Hon. W. Portman, Corton Denham.—Boys 12 hours, if bird-keeping; less according to daylight, and not so much at other work. Women, 8 a.m. to 6 p.m.

(*f.*) What are their hours, reckoning from the time of leaving home to go to work in the morning to the time when they come back to work?

Hardly any answers given to this. The above hours seem to include the time of going to and from work.
The *Rev. J. K. Eagles*, who has given as answer to the above question 6 a.m. to 6 p.m., answers to this, "12 hours, including the meal-times."

(*g.*) What are the times allowed for meals?

H. Blathwayt Festing, Esq., Maiden Bradley.—One hour. They breakfast before going to work, and sup after returning.
Henry Davis, Esq.—One hour allowed for dinner, and half an hour for breakfast.
Rev. J. K. Eagles.—One hour for dinner, and two half hours.
Rev. E. A. Salmon, Martock.—One hour for dinner; half an hour for breakfast.

(*h.*) Does the demand upon their physical powers injuriously affect their health and constitution?

Rev. E. A. Salmon.—Their health is good, but hard work and low diet impair their energies, especially mentally.
Hon. and Rev. W. Portman.—Not to any great extent. The worst is apple-picking, late in autumn, and minding sheep on the hills.
Rev. M. Warburton.—Not so much as low diet and intemperate habits.
Rev. C. Wood.—By no means; quite the contrary; they don't work hard enough to hurt themselves.
H. Davis, Esq.—Work does them no harm.

(*i.*) Are the young or the females, whether young or grown up, subject to any ill-treatment?

Rev. E. A. Salmon, Martock.—The boys get roughly handled in some cases, which brutalises them, but there is no serious ill-treatment.
On the other hand the *Hon. and Rev. F. Portman.*—No; if a farmer thrashes a boy, the parents have him up before a magistrate directly, or take him away from his employment.

(*j.*) Do any special employments injuriously affect females or the young generally?

H. Davis, Esq.—There is no employment injurious to young persons or others.
Rev. F. du Sautoy, Mark.—No, except milking in wet weather.
Rev. W. Hunt, Congresbury.—Although no women are regularly employed on the land, yet very many are employed as dairy and farm servants. Their work is really in the farm-yard, and I think that the lifting pails, &c. affects the health injuriously, and I have observed that there are several cases of disease (*e.g.*, ruptures) from this cause.
Hon. and Rev. W. Portman, Corton Denham.—Apple-picking in wet weather in long grass, drawing turnips in wet while the tops are strong, I consider the most injurious, though there is seldom much to complain of in either work.

(*k.*) Have you any observations to make as to the effect of the employment of females in agriculture on morals, and on their proper training for domestic duties?

Rev. J. L. Carrick, Witham Friary.—It causes home to be much neglected, and the women themselves admit that in the end they lose as much as their wages for this reason.
Rev. H. B. Burney, Philip's Norton.—Prejudicial to the formation of domestic habits. The children left at home wear out more than the parents earn abroad.
H. B. Festing, Esq.—I consider the employment of females in agricultural work most detrimental to their morals, and it totally unfits them for domestic duties; thus driving the husband nine times out of ten to the public house for necessary comfort, which he does not find at home when he returns from work.
Rev. A. Goldney, East Pennard.—Moral evil is produced by the practice of sending dairymaids into the fields to milk the cows in company with a number of men. In bad winter weather this is injurious to health, the milking taking up four or five hours per day.
Rev. E. P. Anderson, Winsford.—I think that the conversation among people working in the fields is often coarse, and when young unmarried women go out to work it conduces to immorality; but there are cases in this parish of the most tidy married women working out, and also of the most dirty, idle, and gossiping staying at home.
Rev. C. Sainsbury, Wootton.—The mother cannot attend to her domestic duties as she ought if she goes

out to work, and is obliged to keep at home *from school* an elder child to look after any too young to be at school.

(The following opinions are in direct opposition to the above.)

Rev. C. Wood.— My observation in Stoyurcey leads me to say that as far as I have seen female agricultural labour is not necessarily, or even probably, detrimental to morals. In general here one sees several women weeding, and if there be a man with them he is generally the husband, father, or son of the woman, or some one of them.

H. Davis, Esq.—The employment of females in agriculture in this neighbourhood is not injurious to morals, or otherwise.

Mr. Lush, Kilmington.—Very different now from what Mr. Lush can recollect, kissing and pulling about in hay-time; none goes on now.

(*l.*) Taking into consideration the demand for labour in your parish and neighbourhood, and the pecuniary resources of the agricultural labourers, are you prepared to recommend that any restriction should be placed on the employment of females in field work?

If so would you limit the restriction to females of a defined age, or would you prohibit female labour in the fields altogether, excepting at hay and corn harvest?

The answers given to this question vary from the wish to put a stop to female labour altogether, to the expression of a wish that there should be no interference.

Mr. Porteous, Marton Bigot.—I would not prohibit females doing light work in the fields.

Rev. M. Warburton, Kilmington.—Prohibit it altogether, except at hay and corn, &c.

H. Davis, Esq.—Females should not be restricted from employment in field-work.

Rev. W. Meade, Binegar.—They should be discouraged in sending females to work in the fields, but in families where girls preponderate it cannot well be helped.

H. B. Festing, Esq.—At the present rate of wages I am not prepared to recommend that any restriction should be placed on the employment of females. In this parish the women like the freedom of out-of-door work.

Rev. A. Goldney, East Pennard.—Not in such a parish as this; though the great amount of heavy work (*i.e.*, milking, &c.), is much to be lamented.

The *Hon. and Rev. F. B. Portman*, Staple Fitzpaine.—Certainly not; because the women so employed are employed as much to their own advantage as that of the farmers. In Bickenhall there are one or two widows, who would starve if they had no field-work.

Rev. J. K. Eagles, Hill Farrance.—Not in this parish, or, so far as I know, with an experience of 30 years, anywhere in this district.

Rev. W. P. Anderson, Winsford.—I do not think that in this parish, whatever may be the case in others, there is any need of any restriction on the employment of females; but speaking generally, I think it would be well to prohibit young unmarried women from working in the fields altogether, excepting as above.

Rev. C. Sainsbury, Wootton.—In our parish girls do not go out to work. I cannot venture an opinion as to the prohibition of female labour altogether; yet would gladly see it abandoned by mothers of families.

(*m.*) Taking into consideration the demand for labour in your parish and neighbourhood, and the pecuniary resources of the agricultural labourers, are you prepared to recommend that any restriction should be placed upon the age at which boys should be permitted to be employed in farm labour?

In like manner the answers to this question vary from a decided negative to a wish to put a complete stop to the labour of boys below a certain age; that age differing in the various circulars from 8 to 15.

The *Rev. C. Wood.*—I am not. The supposed evil rights itself; boys are of no use until physically qualified to be of use.

Rev. C. Sainsbury.—Unless the wages were higher it would be hard to restrict the age to a higher figure than 11.

Rev. W. Meade, Binegar.—Some boys of 6 can be of use, some of 8; and if they come to school in winter they might be allowed to earn something in the spring.

Rev. T. J. Bumpsted, Dinder.—I would not recommend any restriction. I should say, let boys go to work as soon as they are worth wages.

Mr. Lush, Kilmington.—They know how to take care of themselves.

If so, please to state the age below which you would recommend that boys should not be so employed.

Of the 91 circulars, large and small, this question is left unanswered in 21.

15 gentlemen have said that no restriction of age is necessary, of whom 11 are clergymen.

2	think that no child should work under	8 years,	all three clergymen.
1	thinks ,, ,,	8 or 9 years,	
4	think ,, ,,	9 years, of whom 3 are clergymen.	
17	,, ,, ,,	10 years, of whom 15 are clergymen.	
1	thinks ,, ,,	10 or 11 years, a clergyman.	
3	think ,, ,,	11 years, all three clergymen.	
2	,, ,, ,,	11 or 12 years, of whom one is a clergyman.	
18	,, ,, ,,	12 years, of whom 14 are clergymen.	
2	,, ,, ,,	12 or 13 years, of whom one is a clergyman.	
2	,, ,, ,,	13 years, of whom one is a clergyman.	
2	,, ,, ,,	14 years (clergymen).	
1	thinks ,, ,,	15 years (clergyman).	

70+21, in which the question is passed over = 91.

(*n.*) Do you see reason for recommending that the distance to which children and young persons should be allowed to go to work in farm labour should be restricted according to age?

If you think some restriction of distance in reference to age desirable, do you approve of the following, which assumes that boys under eight years of age would not be allowed to be employed at all?

Somersetshire.

Mr. Boyle.

k.

No boy of 8 years of age and under - - -	10		1 mile.
No girl under the age of - - - -	13		
No boy of - - -	10 years of age and under	11	To be taken to work beyond a distance from his or her home of — 2 miles.
	11 „ „	12	
	12 „ „	13	
No young person of - -	13 „ „	14	3 miles.
	14 „ „	15	
	15 „ „	16	4 miles.
	16 „ „	17	
	17 „ „	18	

Have you any modification to propose in the above table ?

To this question the answers are very scanty, owing to the fact that it is only in exceptional cases in Somersetshire that labourers live far from their work.

The *Hon. and Rev. W. Portman*, says, "As regards the younger boys it would not affect us materially; nor would the latter part of the table affect the labourer in this parish, but I should think it desirable, on the whole, to restrict distances, as lads go long distances to work in other parishes."

Mr. Robert Porteous.—Three or four miles are too much for boys to go to work.

Rev. E. A. Salmon, Martock.—I think no one could complain of the above table. It certainly does not go too far. I speak from experience in other scattered parishes.

Rev. J. K. Eagles, Hill Farrance.—I think any distance beyond two miles excessive for any of these ages; but in this parish no such distances are necessary as there is no lack of cottages.

H. B. Festing, Esq.—I think that no boy under 12 should go more than half-a-mile to work. Unless the three short distances in the table mean "to work and back," I would exactly halve them.

Rev. J. L. Carrick, Witham Friary.—There is no need for any restriction here.

(*o.*) Do you see reason for recommending that any restriction should be placed upon the hours of work of children and young persons employed in agriculture; and if so, what amount of restriction would you propose?

H. B. Festing, Esq.—I think no woman, or child under 13, should work, the woman more than six, the child more than five hours.

Mr. R. Porteous.—Yes, decidedly; when children have to go far distances to their work. It would be difficult to say what amount without knowing the distance, the age of the boy, and whether he is a robust boy, or otherwise.

Rev. C. W. Dimsdale, Priddy.—Eight hours for children, and 10 for young persons should be sufficient.

Rev. C. H. Nutt, Harptree.—I believe that in this parish the supply of labour is generally greater than the demand, and any such restriction would have the effect of absolute prohibition.

Rev. F. Du Sautoy.—Eight hours only for children under 14.

Rev. J. K. Eagles.—I have not known anything which would lead me to think any restriction of the present system here necessary. I have never known any consequences of overwork.

Hon. and Rev. W. Portman.—I see no reason, as regards those from 13 to 18. They do not seem the worse for it; but it is a question for the farmer, if he would not get more work done by the younger, and better done, if the time were shortened. I would not let boys from 10 to 13 be out more than 10 hours altogether.

III. As to requiring some Amount of School Attendance in the case of Children earning Wages by Employment in Farm Labour.

23. The Commissioners being instructed to inquire to what extent, and with what modifications the principles of the Factory Acts can be adopted in reference to children employed in agriculture, "especially with a "view to the better education of such "children," your opinion is invited on the following points:—

24. The three modes by which the prescribed amount of school attendance of children employed in trades and manufactures is obtained are—

By the Factory Act (7 Vict. c. 15. ss. 31–9).

1. By half day at school and half day at work.
2. By alternate whole days at school and whole days at work.

By the Print Works Act (10 & 11 Vict. c. 70. ss. 2, 3, 26).

3. By school attendance for a certain number of hours during the preceding six months.

25. Accompanying this circular you will find brief extracts from the above Acts, together with some remarks from the Sixth Report of the Children's Employment Commission (1862), ss. 65 to 74, and ss. 80 to 83, referring to the difficulties to be encountered, and the possible modes of meeting them.

26. You are requested to state which of such modes of enforcing some amount of school attendance would seem most applicable to the circumstances of your parish and neighbourhood; or whether a combination of one or more of them would better meet those circumstances; or whether any other mode that you might wish to suggest appears to you preferable.

There seems to be an almost unanimous opinion among the gentlemen who have been good enough to fill up circulars, that it will be most difficult to apply any of the above systems.

H. B. Festing, Esq.—I think a discretionary power, given to the magistracy in petty sessions, would work well.

Rev. J. L. Carrick, Witham Friary.—I should feel disposed to recommend that attendance at school for at least six months in the year be required of all children below 13.

Mr. R. Porteous, Marston Bigot.—I should suggest that children should be kept at school until they are 10 years old, and after that use all means to get them back to evening schools in the winter months, until they arrive at the age of 14.

Rev. H. B. Burney, Philip's Norton.—Would have compulsory school attendance in winter. No child under 11 years of age should be allowed to be employed by a farmer who does not present a certificate of having passed the third standard.

Rev. W. Meade, Binegar.—Thinks Factory Act hardly practicable, Print Works Act more feasible; would suggest, "night schools in winter months from "middle of October to end of February for big boys; "regular attendance in winter months, and *whenever* "*not employed*, for smaller children."

Rev. C. W. Dimsdale, Priddy.—I think an alternate daily attendance would be most suitable, if not daily.

Rev. W. Hunt, Congresbury.—Scheme 1 would not do for the work, nor 2 very well; 3 would make any systematic arrangement of lessons so as to benefit the child very hard. I should strongly recommend a combination of 2 and 3. "By school attendance "so many half days in the six months," to be greater in case of girls, and to include a good proportion of afternoons to be spent by those above 6 in learning to read.

Rev. F. Du Sautoy, Mark.—By half days under 14.

Rev. A. Goldney, East Pennard.—No. 1. By half day at school and half day at work.

Rev. C. Sainsbury, Wootton.—Neither "the half "day" nor "the alternate day" Act would suit agricultural districts; a requirement that the children should attend so many times at some time of the year would be more practicable.

Rev. E. A. Salmon, Martock.—The third (10 & 11 Vict. c. 70.) is the best of the three. I should recommend compulsory education up to 10 years of age, the guardians paying the school pence in all cases where there are three children in one family under 10 years of age.

Hon. and Rev. W. Portman.—Nos. 1 and 2 would not answer here. According to the circumstances of the parish, it would be difficult to enforce attendance for six consecutive months; but I should consider that attendance for six months *in the year* would be desirable.

The following gentlemen think neither of the Acts, or a modification, practicable or advisable.

H. Davis, Esq., Oakhill.—No rule of the above kind need be made for this neighbourhood. The children at idle times may go to school; but farmers could not employ them, were they to come and go as suggested above, and parents with large families would suffer greatly, were their children prevented from working.

Rev. C. H. Nutt, Harptree.—I consider that any such regulation, as mentioned above, would deter boys from agricultural work altogether.

Rev. C. Wood, Stogursey.—None of the three seems compatible with farm work. The night school and Sunday school instruction are sufficient considering the position in life of the agricultural labourer to keep up and improve upon what they have learned at the day school, before they were fit for work.

Hon. and Rev. F. B. Portman.—Thinks 1 and 2 impossible; 3 would do no good, is not long enough. Practically the boys come most of the winter to school, Michaelmas or Christmas to Lady-day, and work the rest of the year, *i.e.*, boys of 12 and under.

Rev. J. K. Eagles, Hill Farrance.—The children at present go to school until they are put out to work, which is frequently earlier than they ought to be put to labour; but I do not think either of the modes above specified applicable to the district.

27. How far is the school attendance affected by the distance that the children have to go to school?

Rev. J. L. Carrick, Witham Friary.—Frequently those at a distance attend more regularly than those whose home is nearer to the school.

Rev. C. J. Down, Hemington.—The parish being a large and scattered one, the attendance of children is much affected by the state of the weather.

Rev. W. Meade, Binegar.—Considerably: our schools lie three-quarters of a mile from the village, which I think is a disadvantage.

Rev. C. H. Nutt, Harptree.—Not to any great extent, except in winter, and in the case of very young children.

Rev. A. Goldney, East Pennard.—In winter, especially in bad weather, the distance is a considerable hindrance. At all seasons it affects the very young children.

Rev. J. K. Eagles.—The parish is very scattered, and if it were not for schools in other parishes the attendance would be much affected. As it is the attendance at school is a fair average.

Rev. W. P. Anderson, Winsford.—Not much; some who live the furthest off come most regularly; two little girls, 10 and 8 years old, come three miles to school.

Rev. E. A. Salmon, Martock.—The school is too far for the very young children in the outlying hamlets.

28. How far is the school attendance affected by the pecuniary resources of the parents?

Rev. J. L. Carrick, Witham Friary.—The charge of 1*d.* per week is one which all the parents here can afford. I think that a higher rate would ensure greater regularity in some cases.

H. B. Festing, Esq.—There is a steady willingness in the parents generally to send the children to school, for which they pay 1*d.* weekly.

Rev. Wm. Littlehales, Compton Bishop.—The payment is so small, all can send their children if they like.

Rev. J. K. Eagles.—I do not think at all, as the sum paid is so small, only 1*d.* a head.

Rev. W. P. Anderson, Winsford.—Most parents are able to afford to send their children to school.

Rev. W. D. Furneaux, Berkeley.—Not at all, they are only charged 1*d.* per week.

Whereas:—

Rev. M. Warburton, Kilmington.—Very materially.

Rev. Wm. Meade, Binegar.—Some find it difficult to have the pence ready every Monday morning.

Rev. C. H. Dimsdale, Priddy.—The people cannot afford to send more than two-thirds of their children on an average through poverty.

Rev. Wm. Hunt, Congresbury.—The actual money payment does not keep any away. But the poor send their boys to farms and their girls to service far too early, on account of their poverty, and no wonder.

Hon. and Rev. F. B. Portman, Staple Fitzpaine.—Not at all. There is a great and increasing desire on the part of the parents to send their children to school. Nine out of ten fully appreciate it.

Rev. T. Brancker, Limington.—Only in the case of one, or perhaps two, families.

Rev. E. A. Salmon, Martock.—I believe that want of means is often an excuse for want of will; some of the largest hardest families being the most regular at school.

29. Are any efforts being made for the industrial training of girls, in connexion with elementary education, with especial reference to preparing them for their domestic duties?

Rev. J. L. Carrick.—So far as we can do so, by making the elder children keep the school premises in order.

H. B. Festing, Esq.—Some of the ladies of the place privately endeavour to help the girls; but there is a great disinclination to go into service, but it lessens gradually, as the education increases.

Rev. M. Warburton.—None beyond sewing, knitting, darning, and cutting out, taught at school.

Rev. Wm. Hunt.—Sewing is taught in school every afternoon except Saturday.

As a rule there are few answers to this question, and what there are very scanty. Sewing in the schools seems to be almost the only preparation. *See* the remarks of the *Rev. Cyril Wood*, Stogursey (App. 31) in the general evidence.

30. Have you any remarks to make on the subject of cottage accommodation, in regard to its effect on morality or education; or on the health and comfort of the labouring poor?

In reply to this question the gentlemen who have filled up circulars are almost of one mind in complaining of the cottage accommodation in Somersetshire, except in cases where efforts are now being made by some well-to-do landlord.

Somersetshire.
Mr. Boyle.
k.

Wm. Sturge, Esq., land-agent, Bristol, writes: "Cottage accommodation is generally bad in the "western counties, deficient in bedrooms, repairs, "and draining."

Rev. Wm. Hunt, Congresbury. — The number crowded together in a bedroom is most debasing. Some young women over 13, and up to as old as 22, sleep in the same bedroom with father and mother, and in some extreme cases some arrangements are made. Modesty is destroyed, and the whole tone of the mind lowered; I am sure much depravity exists from this source. In cases of sickness and death, this is especially detrimental to health and comfort, but at the best of times it is much to be resisted, if possible.

Robert Porteous, Marston Bigot.—There can be no doubt the faulty and miserable construction of many old cottages is very injurious to the health and comfort of the labouring poor.

Mr. Lush, Kilmington.—The people have no self respect, and do not mind being crowded, children and married sons and daughters in the same house. People will crowd good cottages with lodgers.

Rev. A. Goldney, East Pennard.—In some cases the accommodation is very bad, both sexes and all ages being mixed together in one bedroom; the moral effect is bad, the injury to health is not very perceptible, as the cottages are much scattered; the poor generally do not complain of discomfort, being accustomed to be crowded together.

Rev. T. Brancker, Limington. — In most parishes hereabout it is capable of considerable improvement.

Rev. Prebendary Coles, Shepton Beauchamp.—I have no doubt that want of proper chamber accommodation in cottages is a fruitful source of immorality by destroying or at least lessening a right sense of delicacy. Very few cottages in this parish have three bedrooms, and many only one. Any measure which could improve chamber accommodation would be a great blessing.

Rev. C. Sainsbury, Wootton.—The want of proper bedroom accommodation is obviously injurious to the morality of young people. *This is the great evil of our cottages.*

Rev. W. P. Anderson, Winsford.—The cottage accommodation in this parish is not what it should be. I cannot say that the morality or health of the poor is perceptibly affected by the bad accommodation; their comfort certainly must be.

Rev. F. Du Sautoy, Mark.—But few dwellings are suited for families.

31. How many cottages per hundred acres are considered sufficient for the accommodation of the persons employed on the land in your parish?

32. Is there that proportion of cottages in the parish?

Answers to these questions and the few following are scanty.

Mr. Porteous, Marston Bigot, says, there is but one cottage to 70 or 80 acres, and that is not sufficient.

Hon. and Rev. W. Portman, Corton Denham.—There is an average of over four labourers' cottages to 100 acres. It seems to be enough.

Rev. J. L. Carrick considers two necessary; there is that proportion, and rather more.

The *Rev. F. Du Sautoy*, Mark, considers 15 necessary, and there is that proportion.

33. If not, what is the proportion?

Besides *Mr. Porteous*, who, as above, gives one cottage to 70 or 80 acres as the proportion at Marston Bigot, we have only answers from *H. B. Festing, Esq.* rather over three per hundred acres, in default of four, which he considers necessary, and from *Rev. W. Hunt*, Congresbury, 136 cottages to 4,429a. 1r. 12p. or about three to 100 acres.

34–37 inclusive. *See* the general evidence.

38. If there is deficient cottage accommodation, is any progress being made towards increasing it?

For answers to this question, see also general evidence. Little progress is being made except by some of the larger proprietors.

H. B. Festing, Esq., agent to the Duke of Somerset, writes, that "during about 13 or 14 years there "has been an increase of 20 cottages" at Maiden Bradley. *Wm. Sturge, Esq.*, speaking generally, writes, "some progress on a few larger estates, and "in populous places."

The *Rev. Wm. Meade* assigns as a reason in his parish (Binegar) for nothing being done: "The whole "parish is held on lives under the agricultural com- "missioners."

39. Is the Union Chargeability Act (28 & 29 Vict. c. 79., March 1866) having any effect in causing an increase of cottage accommodation?

The almost universal answer to this question is "not at all," or "very slightly," with no particulars or reasons given, except by the *Rev. Wm. Meade*, who explains, "we are not freehold property; no one "will build under lives." Where any slight improvement may be attributed to this Act, it is of course in close parishes.

40. By the Act 27 & 28 Vict. c. 114., July 1864, the Enclosure Commissioners are authorized to advance public money for the improvement of land, including, by s. 9, "The erection of labourers' cottages, * * "and the improvement of and addition to "labourers' cottages."
Have you any remarks to make upon this Act in regard to any additional facilities, or any reduction of cost, that might cause greater progress to be made in supplying the want of good cottages?

In reply to this question, see the remarks made by Mr. Ward (App. 318), Sir Arthur Elton's agent, in the general evidence.

Writing of Kilmington, *Mr. Lush* says, "I do not "think it would here; cottages are not wanted, "several empty."

Wm. Sturge, Esq.—The Commissioners' requirements make cottages much too expensive. (Mr. Sturge's opinion is more than valuable on questions of this kind, owing to his intimate acquaintance with the agriculture and condition of Somersetshire.)

41. Can you suggest any mode by which good cottage accommodation could be provided on self-supporting terms, and involving no disadvantage to the tenant?

Most of the answers to this question seem based on the conviction that in the present state of poverty it is impossible for the labourer to pay the real value of the cottage, and consequently that the landlord must lose by his cottage property.

Thus, *Wm. Sturge, Esq.*—I know of none; the only hope is raising the condition of the labourer so as to enable him to pay a higher rent.

Wm. Festing, Esq.—I do not think cottages can be built to pay unless the tenant is ground down harshly. I consider cottages necessary to an estate independent of the profit and loss question.

Mr. Porteous, Marston Bigot.—I have found the farmers very willing to pay a per-centage on the cost of the construction of cottages sufficient for their farms. This may be done by charging a per-centage sufficient to repay the landlord in 25 or 35 years, or by burthening the next heir with a proportion of the charge of cottages on each farm.

Rev. M. Warburton.—Take away the cottages from the farmers, and place them in the hands of the landowner.

Rev. Wm. Meade. — Cottage property, in my opinion, is always a loss to the landlord, especially if he is a gentleman.

Rev. Wm. Hunt.—If cottages of three bedrooms or two large ones were built on the farms in which the tenants work, they would pay. The man would be nearer to his work; the master would have him close at hand in case of calving, &c. and the illness of cattle. In the case of men not permanently attached to any farm (very constant in this part) I think that better cottages would pay better, especially if a garden was attached. I believe the Bristol Charity Trustees get their rents paid more regularly than the owners of small and tumbledown cottages.

Rev. A. Goldney.—I do not think good cottages can be built here, so as to be a directly profitable investment.

Hon. and Rev. W. Portman.—I should be glad to see all cottages in the hands of the landlords, excepting two, three, or four to each farm, according to its size, for carters and shepherds. If proper supervision were exercised by the agents in such cases there would probably be a decided improvement in the buildings themselves, and the comfort of the people.

Rev. W. P. Anderson.—It seems to me to be the duty of the landowner to provide good cottage accommodation on all his farms; such cottages being of the nature of a necessary charge upon the land, could hardly be considered as self-supporting.

For statistics required by 42 and 43, see General Evidence.

44. Approximate number of children of the agricultural labouring class neither at school nor at work.

There are few children in any parish who are not at school nor at work. Those who there are, are to be found in one or two families generally, where the parents, being uneducated themselves, do not see the advantage of education for their children. Compton Dunden is, I think, the only parish in which there is no school.

Hon. and Rev. W. Portman.—I can make no exact returns under this head. There might be six children, perhaps, taking the year through, certainly not more, above 8 years old. (Corton Denham, population 410.)

Rev. W. P. Anderson.—Hardly any except infants.

45. Approximate number of young persons of the agricultural labouring class growing up with insufficient education.

Rev. J. L. Carrick gives in his parish (Witham Friary, population, 581), 12 males, and 10 females, or 1 in 26, "unable either to read or write at all, and "ignorant of the most ordinary matters."

Hon. and Rev. W. Portman, Corton Denham, population 410, gives 12 males, four females, or one in 25: "have been at school some time, but very "irregularly, or are new comers (three are so). Can "read and write badly; left early, before being pro-"perly grounded."

Rev. E. A. Salmon, Martock (population 3,154), gives 40 males, and 110 females at least, or one in 21: "cannot read a chapter of the Bible, or write "intelligibly, and know nothing of arithmetic. Could "not pass standard three, many of them not even one "or two."

Rev. W. P. Anderson, Winsford.—It is difficult to say, very few actually belonging to the parish, but there are farm servants of both sexes, who come from other parishes, with very little education. They are a constantly changing element of the population.

Rev. Charles Sainsbury, Wootton (population 350), gives 12 males, seven females, or one in 18. Some of them may yet have some schooling; five cannot read, or very little, inclusive of servant girls at farmhouses, who are not parishioners.

46–49. To the following four questions on the subject of night schools, the usual answers, where they exist, are about 20 weeks a year, for two nights a week, and two hours per night. The following gentlemen have given the answers appended to their names:—

—	Rev. J. L. Carrick, Witham Friary (population, 581).	Rev. A. Goldney, E. Pennard (population, 656).	Hon. and Rev. W. Portman, Corton Denham (population, 410).	Rev. E. A. Salmon, Martock (population, 3,154).	Rev. C. Sainsbury, Wootton Courtenay (population, 350).	Rev. C. Wood, Stogursey (population, 1,500).
47. How many weeks in the year is it open? At what periods of the year?	Nov. to Feb.	24 weeks.	15 or 16 weeks.	About 16, mid-winter.	About 22. Sept. to April.	20 weeks. Oct. to March.
48. How many nights per week?	2	4	3	4	3	3
49. How many hours per night?	2 hours.	1½ hours.	2 to 2½ hours.	2 hours.	2 hours.	2 hours.
50. What is the number of Scholars?	23	10	32	126	About 12.	55
51. What are the subjects of instruction?	Reading, writing, arithmetic, and Scripture history.	Reading, writing, arithmetic.	Reading, writing, arithmetic, and dictation.	Reading, writing, arithmetic.	Reading, writing, arithmetic.	Reading, writing, arithmetic, religious teaching by the vicar.

52. Do you consider that the evening school adequately supplies the deficiencies of the day school?

H. B. Festing, Esq.—No, but it is doing good.

Rev. J. L. Carrick, Witham:—Its chief use is a little geography and history, to keep up what has been learnt at school.

Rev. C. Wood, Stogursey:—The evening school would adequately supply the deficiencies of the day school, if all who need the teaching attended it.

N.B.—Almost all the answers are in the negative.

53. What do you find to be the principal difficulties in the way of maintaining an efficient evening school?

H. B. Festing, Esq.—Want of teaching power. A large staff of volunteers is requisite to keep this class of scholars orderly, as also to attend to them, as they are difficult to classify both from age and previous acquirement.

Rev. M. Warburton, Mark.—The irregular attendance at day school in former years.

Rev. Wm. Meade, Binegar.—The want of teachers or a teacher; for an evening school to be effectual

Somersetshire. Mr. Boyle. k.

ought to be held every evening in the week, except on Saturdays.

Rev. Wm. Dimsdale, Priddy.—Not good for females to go in the evening, and the weariness and lassitude of the boys is the principal obstacle to their learning in the evening. It is very difficult in this parish to obtain teachers.

Rev. Wm. Littlehales, Compton Bishop.—The irregularity of the scholars.

Rev. A. Goldney, East Pennard.—Late hours of work, and distance from school.

Hon. and Rev. W. Portman.—Distance, bad weather, natural fatigue after work all day, and the necessity of taking up so much time in the first half of the season in picking up what has been forgotten. So the annual improvement is small, but perceptible, and the system becomes more popular every winter.

Rev. T. Brancker, Limington.—That I have no one to depend upon for keeping it but myself. My mistress has enough to do in the day time.

Rev. E. A. Salmon, Martock.—As to males, they are tired and sleepy after a hard day's work, and by the time they have walked home and had their supper they are ready for bed, as they have to be up early in in the morning: when the evenings are light, they work in gardens. As to females they cannot spare the time from gloving.

Rev. C. Wood, Stogursey.—Irregular attendance; from (1), indifference; (2), distance of home from school; (3), objection of some farmers to allow boys out from 7 to 9 p.m.

Rev. W. P. Anderson, Winsford.—There is no difficulty; I keep it myself.

Of the 61 short circulars, 48 are filled up by clergymen.

1. At what ages, and at what times of the year, are boys employed in agriculture on your property or farm, and in your parish generally?

The following answers imclude ages from 6 years old till 12, in various parishes.

W. Gray, Esq, Kingweston.—Principally as carters boys about 12. Very little employment for boys under 12. Bird-keeping generally done by an old man with a gun at 1*s.* a day; worth half a dozen boys. You cannot depend upon them.

Mr. Hancock, Halse, employs eight or nine boys altogether all the year round; the youngest is 11. Boys go younger to keep birds, but that is done as often or oftener by little girls, the boys getting regular work very soon, such as keeping sheep or leading horses.

Rev. Wm. Castlehow, North Cadbury.—In the parish generally all the year round from the age of 10. A few under that age occasionally in bird-keeping and apple-picking.

C. Harris, Esq., Ilchester.—At least at 10; bird-keeping, some even earlier; they drive plough, and go with horses. Thinks bird-keeping a cruel thing; keeping a boy out on a wintry day; parents want to get the 1*s.* a week. Twine does just as well.

Rev. F. Kinglake, Monckton.—Boys are employed from the age of 10 years. There are exceptions, but this age may be taken as the rule. They are employed during the whole year; but it is not an unusual thing for a boy of 10 to 12 or 13 to go to work at a busy time and to attend school at slack time of the year.

Rev. Edward Yarde, Porlock.—From 10 years upwards; part all the year round, part by the job. Drive horses. At 10 principally picking stones, keeping birds, planting potatoes, apple-picking, picking acorns for the pigs.

Sir Wm. Miles, Bart., Leigh Court.—From 9 till 14, bird-tenting. Boys from my school are employed during the spring and summer with the schoolmaster in spudding thistles, pulling docks and charlocks, and singling mangold-wurzold in fine weather.

Rev. J. W. Robinson, North Petherton.—From 9 years old and upwards. Bird-keeping in the spring and summer, apple-picking in the autumn. As they get older they get into permanent employment on the farm, either about horses or cattle.

Mr. R. Pittard, Kingsbury.—8 to 9 keeping sheep or pigs, or birds from the corn. Driving plough they would begin at 10, picking stones, &c. A small boy often assists a bigger in parting sheep, &c.

Rev. G. W. Grogan, Somerton.—Children are employed from very early years, from 8 to 9, cattle-tending, bird-watching, and other light jobs. Very young children are sent out with waggons, boys of 9 or 10 years old, younger than is allowed elsewhere.

Thomas Ward, Esq., Bristol.—From 8 years of age and upwards, say from four to six months in the year.

Jno. Yatman, Esq., Winscombe.—From 8 years old; in summer chiefly bird-scaring, pea-picking, potato-setting, picking apples; children and young persons of both sexes from early day to 6 p.m.

Rev. R. Watson Moor, Stoke St. Gregory.—At all times of the year from 8 years of age. A good deal of withy-peeling, at which a child of 5 years can earn 1*s.* a week. Keeps them much from school.

Rev. J. Beadon, Axbridge.—Boys go from 8 to 10, a good many. Mr. Collings had a boy of 7 keeping birds for about three weeks.

Rev. J. H. Evans, Merriott.—A great many boys work in the garden ground all through the year from 7 years old and upwards.

Rev. J. G. Hickley, Walton.—Very early, often at 7 (instances even earlier, but then employed by parents). At all times of the year, bird-keeping, plough-driving, and sheep-keeping, and when once begin to be employed will get regular employment. Odd jobs about the farm.

Rev. C. L. Pemberton, Curry Mallet.—Boys go to work from 6 years old in some cases, but are not all taken so young.

Rev. G. A. Mullens, Chedzoy.—Boys are employed in the parish at all ages from 6 years of age and upwards, and all through the year, but chiefly in spring and autumn.

Rev. C. L. Southey, Kingsbury Episcopi.—From 5 or 6 at all times of the year.

Rev. W. P. Michell, Carhampton.—Boys go out to service at 9 years old to drive horses and carts; but many are employed at a younger age for some parts of the year in keeping birds off the cornfields, &c.; they begin at 6. A month now (March), a month in November, and a month harvesting. Farmers think themselves bound to take labourers' sons as soon as they are old enough.

2. Are girls so employed? And, if so, how many, at what ages, and in what occupation?

Girls are most extensively employed in the Western division of the county, but never to the same extent as boys. In the south gloving is almost their only employment. In the east they are little employed except on the westerly slopes of Mendip.

1. Thus from Winscombe, *Jno. Yatman, Esq.*, writes, "Yes, from extreme youth in picking peas, "weeding, &c." From Shipham the *Rev. J. N. Garland:* "Occasionally; but at an age senior to the "boys, picking out weeds, cutting turnips, sorting "potatoes, and other light work."

2. From the gloving districts, the *Rev. W. G. Grogan*, Somerton: They are employed in light field-work; very young, but not so many as boys, being employed in gloving at home or in the factory.

Rev. J. H. Evans, Merriott.—Yes; but not to the extent that boys are. Some boys and girls under 13 work in the factories at half-time.

Rev. R. W. Lambert, Fitzhead.—I do not know of any girls so employed, but in haymaking time; there may be very few in leasing or gleaning on their own account for three weeks or a month. Many go out with their mothers to glean, but a very large

proportion of girls are constantly employed in making gloves.

3. From West Somerset,—

Rev. E. Huxtable, Weston Zoyland.—The girls are a good many of them employed during August, September, October, and November, either in leasing or in picking up apples or potatoes, or in sorting potatoes, *for their parents*, or in many cases in the apple or potato crops *for hire*, from about 10 years of age.

Rev. J. D. O. Crosse, Pawlett.—Merely as gleaners, and in apple-picking and potato-setting, from 9 years old.

Rev. F. C. Kinglake, Monckton.—Girls usually go into service. In this parish there are usually a few girls engaged in agricultural labour. When so employed there are very few under 15 years, and their work would consist of such things as weeding, hoeing turnips, picking up stones, apples, &c., and they would take their share of work at haymaking and harvest.

Rev. E. J. Carter, Kingston.—Girls are employed, but to a very much less extent, and not quite at so early an age, in apple-picking, potato-digging, and assisting women on the farms.

Mr. Hancock, Halse.—Girls keep birds just as much as boys, perhaps more, as boys get regular work very soon. Girls will do such work till they go out to service, generally at about 13 or 14.

Rev. E. Spurway, Heathfield.—Girls under 13 are employed only at certain seasons of the year, viz., keeping birds, picking apples, singling turnips, and mangolds, and picking stones. Girls above this age generally go out to service. There is only one above this age who works all the year round in this parish.

Robert Featherstone, Wiveliscombe.—Some 15 to 20 girls aged 12 to 16 are employed picking stones, weeding, &c.

Rev. A. Tate, Kingsbrompton.—Girls are not generally employed in out-door work. They are taken as household servants into farm houses, at about the age of 12.

Rev. F. K. Warren, Exford.—Girls of 14 and upwards, if they happen to be out of a place, are occasionally employed in harvesting, and very rarely in weeding. Girls under 14 very rarely employed.

Rev. W. P. Michell, Carhampton.—Girls are not employed to any great extent in agriculture; nearly all of them go out to service as indoor servants. All who go out are in the worst families, *i.e.*, those which have never been educated.

Rev. E. Cox, Luscombe.—Girls are employed in agriculture occasionally from 11 to 12.

Rev. E. Yarde, Porlock.—Very seldom. Occasionally girls from 10 years of age to 13 are employed bird-keeping or planting potatoes. Generally go to service about 15 in the farms.

3. To what extent are women so employed?

In reply to this from the gloving district, *C. H. Harris, Esq.*, Ilchester, writes, "None work in agri- "culture. All do gloving." Over the rest of the county female labour is pretty general, usually among married women and widows.

Rev. Wm. Castlehow, North Cadbury.—About 10 are employed in the whole parish (population 996), besides a few in milking only.

Rev. C. F. Tink, Shepton Montagu.—Labourers' wives occasionally, but not necessarily for the farmers for whom their husbands work. No regular work all the year round.

Rev. W. M. Leir, Ditcheat.—During the bean-planting season, and occasionally weeding the wheat, and haymaking.

Rev. J. G. Hickley, Walton.—Principal work bean-planting and potato-setting. It is not injurious to them and those who work are of no worse class than others. They get 8*d.* a day, but do not really make any profit of it, with wear and tear of clothes, &c.

Rev. G. Pugh, Shapwick.—Both girls and women are very generally employed with their own families in the turf-moors of Shapwick and Ashcott alike, many of the labouring men being engaged in cutting turf on their own account, or with, or for others, as partners or helpers.

Rev. J. Warren, Bawdrip (population 450).—About 20 women are employed in the ordinary field work in the spring, summer, and autumn.

Rev. J. W. Robinson, North Petherton.—They are employed to a certain extent, but generally on the farm, or where their husbands are employed. The majority of the women do not work in the fields.

Mr. Hancock, Halse.—Has seven women in regular employment, labourers' wives, at 8*d.* and a pint of cider a day. On an average in winter they will work four days a week, nearly every day in summer; but very often they do not come for some time, and then come again at their discretion. If it is wet there is work always to be done indoors among the roots.

Rev. E. Spurway, Heathfield.—A few women are employed all the year round, having the option of staying at home to mend clothes, wash, &c. They bind and stitch corn, pick turnips for sheep in winter, assist when corn is threshed, and other general work. But they are less inclined to work in the fields now than formerly.

Rev. E. J. Carter, Kingston.—Generally. In most cases a farmer will not engage a man to work unless his wife undertakes to work also. The wages being so low, the women think it necessary to work to make up a living.

Rev. J. K. Warren, Exford.—The labourers' wives are generally employed in weeding, picking stones, and harvesting. The union does not allow relief to widows, if able-bodied, so they must go out.

Rev. J. M. King, Cutcombe.—Women are regularly employed if they choose to work, and farmers much prefer those men whose wives do so; the practice is, however, going out, and I think much to the detriment of the women themselves, and their families. I am very positive on this point.

Isaac Clarke, Lynch.—I should say on the average three days a week.

Rev. W. P. Michell, Carhampton.—Women are employed in agriculture to a considerable extent. Most of the labourers' wives, who are not kept at home by ill-health or infants, work in the fields.

4. To what distances do the children, young persons and women employed on your farm and in your parish generally go to work?

As a rule the distances are not great.

The *Rev. Giles Pugh*, Shapwick, many of whose parishioners work in the turf-moors, writes, "From "two to three miles gives, I think, the extreme dis- "tance, both as to farms and turf-moors."

The *Rev. E. Huxtable*, of Sedgmoor, writes, "From $\frac{1}{2}$ mile to $1\frac{1}{2}$, and in some cases 2 miles.

Sir W. Miles, Bart., Leigh Court.—From the village, except bird-tenters, who usually come from Pill, $1\frac{1}{2}$ mile distant from the arable farm.

C. Harris, Esq., Ilchester.—A good many labourers go into the neighbouring parish of Sock to work, a parish which originally had no cottages, but is now getting better owing to the new Bill.

Rev. G. Phillips, Chillington.—About a mile; occasionally they have further to go, two of the farmers having land in adjoining parishes.

A. S. Lovelace, Winsford.—Short distances, because if a farmer has not sufficient cottages on his farm for his labourers, he keeps them in his house.

5. What are their hours of work?

The *Rev. E. Spurway's* (Heathfield) answer is a very fair specimen of the hours that women work over most of the county:—Women's hours in summer are 7.30 a.m. to 6 p.m. Winter, 8 to dusk, with about $1\frac{1}{2}$ hours to 2 hours for meals; but they very often work half days, being obliged to stay at home to attend to their own domestic mattters.

Somersetshire.

Mr. Boyle.

k.

Rev. J. N. Garland, Shipham.—From 8 a.m. to 6 p.m., with intervals for breakfast and dinner; but punctuality is seldom observed.

Isaac Clarke, Lynch.—Children 10 hours a day and women eight.

T. P. Brodmead, Esq., Enmore.—The women come to work at 8 o'clock, and leave at 6, having one hour for dinner. In winter the women leave work at sunset.

Rev. C. Carey, Kingweston.—From 6 to 6 in summer. Some boys come earlier to work. Women at 7 or 8 o'clock.

Rev. C. Beadon, Axbridge.—Women work as long as the men. Sometimes not till 8, but it depends. At a pressing time they often work 12 to 13 hours, picking peas; then they get extra pay. Usual pay 1*s.* and a quart of cider. It is a market-garden district.

Jno. Yatman, Esq., Winscombe.—Very irregular in the "cropped" lands, *i.e.* market gardens, where they are sometimes up at 4 a.m. till 10 at night.

6. Is it desirable to place any restriction on the age at which boys should be permitted to work on the land, and, if so, at what age would you place the limit?

The following are specimens of various shades of opinion on this subject, varying from a direct negative to a wish to fix a rather advanced limit of age prior to attaining which boys should not be allowed to work in the fields.

Rev. C. C. Southey, Kingsbury Episcopi.—The rate of wages is so low that to restrict the labour of any able to earn would be a great hardship, if practicable. Farmers do not want the boys so much as parents come to ask for work for them, owing to wages in the parish being so low as 8*s.* or 9*s.*

Rev. Wm. Castlehow, North Cadbury.—I think it desirable they should not be removed from school so early; but if they were restricted from working on the land before the age of 12, for instance, they would not in the case of large families be necessarily sent to school, as the wages are too low (about 9*s.* or 10*s.* a week for an able-bodied man) to allow school pence for more than one or two in a family.

Rev. C. Carey, Kingweston.—I do not think it desirable that boys should go to work before 10 or 11 years; but do not think any legislative restriction is called for, or could be rightly enforced. It is only in the poorest families where the boys go to work so very young, when their earnings (2*s.* 6*d.* a week) is almost a necessity to the parents.

Rev. J. C. Hickley, Walton.—Desirable that children should not be put to regular farm work so early certainly. I do not feel sure that legal restriction would effect this object. Partial work at an early age, 8, would not do harm. They must begin early to learn their business. It is hard with wages only 9*s.* to expect a father still to go on supporting a sturdy boy who can make enough to keep himself.

Rev. R. W. Lambert, Fitzhead.—Nine years of age for actual work, but at 8 they might be employed at some seasons picking up potatoes and apples, keeping birds off corn in summer or watching sheep. But I believe they gain nothing by such employment, though farmers find advantages from their services.

Rev. A. H. F. Luttrell, Minehead.—I do not think it desirable that boys should be allowed to work on the land for any purpose earlier than 9; but at 10 they should be allowed to be earning something towards their maintenance. I do not see how agricultural labourers could live without such help, having large families.

Rev. E. Yarde, Porlock.—I think that no boy should be allowed to work on the land under the age of 10 years. If sent to school from 5 to 10 they learn quite enough, and there are several large families in the village to whom the loss of their labour would be a great blow.

Rev. W. P. Michell, Carhampton.—I think that boys should not go out to service until they are 10 or 11 years old, instead of at 9 years old as at present. If you have a good school a boy can learn quite enough by 11. He will not settle to manual labour if kept at school later, and gets into idle habits.

Rev. H. Roberts, Othery.—Not younger than 10, provided they go to school.

Rev. F. King Warren, Exford.—I think it is desirable that boys should not be allowed to go to work under 12, as the small sum earned by boys under that age does not at all compensate for the want of schooling. Not more than 2*d.* or 3*d.* a day does not pay for tear of clothes.

Rev. W. H. Cartwright, Butcombe.—Certainly not earlier than 13 years; and then the labour should be of a kind suited to the constitution of the child. One year at school after that age will in most instances be of greater benefit to the child than five previous, both as respects moral training and bodily strength.

Rev. E. P. Vaughan, Wraxall.—I should be inclined to say that no child under 12 years of age should be permitted to be employed in agricultural work without a certificate that he can read without spelling any common book, such certificate to be signed by the master or mistress of the school he has attended, the clergyman of the parish, the minister of the chapel, or some householder in the parish rated above, say, 20*l.* in the parish books, not being the child's employer. An appeal as to the truth of the certificate to be allowed to H.M. Inspector of Schools, or in the case of the Church of England children to the Bishop's inspector.

Jno. Yatman, Esq., Winscombe.—I would compel every farmer to have two boys, as I do, and send them three days to school.

Rev. E. Huxtable, Weston Zoyland.—I should like to limit the hiring of boys to three days in the week, requiring their employer to have a certificate from the schoolmaster of the child having attended school the other three days—under 12 years of age.

7. Is it desirable to place any restriction on the employment of females, and especially of the young, in agriculture?

The general opinion seems to be that girls should be restricted, if not altogether, at any rate those under a certain age, usually 15. The following answers represent pretty well the various shades of opinion:—

Rev. R. W. Moor, Stoke Gregory.—No, as their labour is optional. Those who do not work are not a better class than those who do.

Rev. J. Higgin Evans, Merriott.—Not on women, but on young girls until 10 or 12.

Rev. J. Hancock, Haselbury.—I should say yes, but I do not think the employment of females and young persons in agriculture is quite so injurious to morals and health as the employment of them in factories.

Rev. J. K. Warren, Exford.—No harm, or very little, arises from the employment of women in agriculture in this parish, except when the mothers are at work, the elder girls are kept from school, to look after the house and baby, if any.

Isaac Clarke, Lynch.—I think it would be desirable to place some restriction on the employment of young girls.

Rev. Alex. Tate, Kingsbrompton.—The employment of mothers of large families in field-work necessitates the keeping at home of one of the elder children, who ought to be at school, and in this way is undesirable.

Rev. J. G. Carter, Kingston.—I would prohibit it at all times of the year except harvest, hay or corn, and where females are working by themselves, such as picking apples or potatoes.

Henry Robertson, Esq., Over-Stowey.—I think it desirable to place a restriction on young girls under 15 years of age.

Rev. C. Kinglake, Monckton.—I should be glad to see a restriction placed on girls working in the fields under the age of 15.

Rev. G. O. Mullens, Chedzoy.—I do not think girls should be employed in the fields under the age of 15 years.

Rev. A. N. Bull, Woollavington.—I think girls should not be allowed to work in the fields under 13; better not at all, as it has a tendency to corrupt their morals, and to unfit them for domestic duties and service.

Sir W. Miles, Bart., Leigh Court.—Certainly for the young; but within my recollection the employment of females has much diminished, which I attribute greatly to the spread of education, and the consequent need found by the labourer of home comforts.

Rev. G. W. Grogan, Somerton.—Young females should be restricted as far as possible, but whether by legal enactment, or improving the general condition of the labourer, and enforcing a certain school attendance by landlords and employers, or through bringing public opinion to bear on the question, it is hard to decide.

Rev. J. A. Miller, Isle Brewers.—If young women are employed in the fields they should be kept at work by themselves, or should work under the eye of some one whose presence would be a protection to them.

Rev. C. L. Pemberton, Curry Mallet.—The restriction is not necessary for the women, I think, but is certainly desirable for the children.

Rev. C. F. Tink, Shepton Montagu.—Most desirable. Cottages of women who work on the land most untidy.

Rev. G. Pugh, Shapwick.—Out-door work, especially on the turf-moors, has, I am convinced, had a very demoralizing and hardening effect on females in these parishes, especially in Ashcott, where those resident on the moor, two miles from the parish, are very uneducated and uncivilized, besides irreligious.

8. What means of education are provided in your parish for the children of the agricultural labouring class? Do they take advantage of them?* If not, are there any other causes besides early labour to which you attribute their non-attendance?

*For answers to the two first of these questions *see* General Evidence. The following are specimens of answers to the third :—

Rev. W. P. Vaughan, Wraxall.—There are families who take away their children too early from the school, and many who send them very irregularly, that they may do odd jobs and pick up 6*d.* or 1*s.*, families in which ignorance is hereditary.

Rev. J. N. Garland, Shipham.—Many do not take advantage of the school from the carelessness of their parents, who, not having had the advantages of education themselves, care not to have it for their children.

Rev. J. N. Robinson, North Petherton.—They take advantage of their opportunities till a child can earn anything. Home duties interfere with the girls' education.

Rev. H. Roberts, Othery.—The boys are prevented to some extent by early labour; in some instances indifference on the part of the parents.

Rev. J. W. Moor, Othery.—Distance from the schools, bad roads, apathy. Farmers have a good deal to do with children not coming to school. There is no squire, and the farmers will not subscribe.

Rev. J. A. Miller, Isle Brewers.—The attendance is improving, but there are several who either do not attend, or attend very irregularly. For this various reasons might be assigned: the utter indifference of some parents to the welfare of their children; the unwillingness of the parents to send their children clean and tidy, and to take the trouble even to mend their clothes; the drunken habits of some parents, in consequence of which their children are left very much to themselves; the jealousy of interference on the part of the more ignorant parents, who have no idea of the need of school discipline, and who, therefore, resent the punishment of their children, although they will often themselves half kill them when offended with them.

Rev. C. C. Southey, Kingsbury.—The people are indifferent to education; can hardly keep children at school after 8.

Rev. J. H. Evans, Merriott.—Many children are kept from school through the ignorance and poverty of their parents.

9, 10. *See* General Evidence.

EVIDENCE accompanying Mr. HENRY TREMENHEERE'S REPORT.

Cumberland.

Mr. Henry Tremenheere.

APPENDIX A.—CUMBERLAND EVIDENCE.

CONTENTS.

Nos.
1. Mr. John Ross, agent and manager of the Muncaster Castle estates.
2. Mr. William Sykes, farmer, Millom.
3. Rev. Arthur Wilkin, rector of Bootle.
4. Mr. John Grice, farmer.
5. Rear Admiral Scott, Gosforth.
6. Rev. J. A. Cheese, rector of Gosforth.
7. Mr. J. Carter, farmer, St. Bees.
8. Mr. J. Shirwin, landowner.
9. Mr. J. Fox, farmer, St. Bees.
10. Mr. Robert Jefferson, deputy chairman of the Board of Guardians, Whitehaven.
11. Mr. William Dickinson, land agent, Workington.
12. Rev. Henry Curwen, rector of Workington.
13. Mr. W. Jenkinson, farmer.
14. Mr. Peter Crosthwaite, farmer.
15. Mr. Peter Harrison, schoolmaster, Crosthwaite.
16. Mr. John Rook, farmer.
17. Mr. Joshua Jenkinson, landed proprietor and occupier.
18. Mr. W. L. Alexander, landed proprietor and occupier.
19. Mr. Pearson Clark, farmer.
20. Mr. John Richardson, land steward.
21. Mr. J. Robinson, farmer.
22. Rev. J. S. Hodgson, rector of Aikton.
23. Robert Norman, Esq., solicitor and land agent.
24. Mr. McMechan, secretary to the Wigton farmers' club.
25. Mr. William Hodgson, schoolmaster.
26. Mr. John Grainger, landowner.
27. Rev. Thomas Ashworth, rector of Holm Cultram.
28. Mr. John Galloway, landed proprietor and occupier.
29. Joseph James, farm labourer.
30. Sir Robert Brisco, Bart.
31. Mr. Nicholas Wright, farmer.
32. Mr. W. Tinning, farmer.

Nos.
33. Mr. Matthew Brown, land steward to Sir Frederick Graham, Bart.
34. Isabella Deans, farm servant.
35. Mr. William Gibbons, farmer and deputy chairman of the Board of Guardians, Longtown.
36. Mr. J. Little, farmer.
37. Mr. W. Thompson, schoolmaster.
38. Mr. F. Graham, land steward to H. Howard, Esq.
39. Mr. W. Hugill, schoolmaster, Brampton.
40. Mr. J. Robinson, Brampton
41. John Ramshay, Esq., agent of the Earl of Carlisle.
42. John Coulthard, Esq., tenant occupier.
43. Edward Ridley, farm servant.
44. Mr. W. Forster, farmer and innkeeper.
45. Mr. William Heskett, land agent.
46. J. Hodgson, Esq., clerk of the peace for Cumberland.
47. William Hutchinson, school boy.
48. James Stevens, farm servant.
49. Mr. Andrew Wright, landowner.
50. Master of Hayton parish school.
51. Rev. W. C. P. Baylee, vicar of Alston.
52. Mr. Thomas Cooke, schoolmaster, Alston.
53. Mr. Chr. Gatenby, schoolmaster, Penrith.
54. E. W. Hasell, Esq., Chairman of Quarter Sessions for the counties of Cumberland and Westmorland.
55. John Crosby, gangmaster.
56. James Burrell, gangmaster.
57. Mr. Thomas Bowstead, land steward to Sir George Musgrave, Bart.
58. Mr. John Barker, land steward to P. H. Howard, Esq., Greystoke Castle.
59. Mr. Joseph Relph, farmer.
60. Mr. J. H. Thompson, master of Penrith boys' National school.

1. *Mr. John Ross*, agent and manager of the Muncaster Castle estates.—The wages in this district are so high, varying from 15*s.* to 18*s.* per week, that labourers here will not permit their wives or, excepting for a short period in the year, even their children to work in the fields. In fact women are not to be hired, or we should be very glad to employ them. A little work in harvest time and potato gathering is all that we can obtain from them. The school at Muncaster, which is under Government inspection, is well attended, and the boys seldom leave before 14 or 15, when they are either hired as farm servants or apprenticed to trades. The system of hiring at the half-yearly fairs prevails here, and great evils result from them; but the practice of the farm servants in insisting upon what they call "terms," is the greatest evil of the country. For a week in every half-year there is a total suspension of all agricultural work. At a time when labour is of the greatest importance to the farmer his workpeople, one and all, give themselves up to idleness and dissipation, and no consideration will induce them to move a finger on behalf of their employers. The savings of the half-year are often dissipated in a week.

The agricultural labour market over the whole of West Cumberland is affected by the iron and coal mines, which abstract a considerable number of men, who are attracted by the higher wages, and but for machinery I do not know how the ordinary operations of farming could be carried on. The population is very sparse, and from the peculiar arrangement of boarding and lodging farm servants and the discouragement of marriage inseparable from such a system it does not increase, and boys who have obtained a tolerable education naturally seek to better themselves by seeking situations in towns.

2. *Mr. W. C. Sykes*, of Millom Castle farm.—I rent and farm an estate of 240 acres, chiefly arable land, under the Earl of Lonsdale. I pay as much as 3*s.* 4*d.* a day to labourers, and they are not always to be had even for that. I have four male farm servants and two females, the wages of whom, exclusive of their keep, are from 12*l.* to 24*l.* a year. I should be very glad to get the assistance of women in field

work, but it is not to be had. The "terms" at Whitsuntide and Martinmas interfere most seriously with farm work. Although the holidays are supposed to be only for a week they generally last ten days. There is here little demand for the labour of boys until they are old enough to take service, which is about the age of 14 or 15.

3. The *Rev. Arthur Wilkin*, rector of Bootle.—There is scarcely any female labour employed in this district. The population is very sparse, and the land is cultivated almost entirely on the farm servant system; a little extra labour is required in hay time and harvest and the turnip season, but it is difficult to obtain. Boys generally remain at school until 14, and then go into the farm-houses as servants, or are apprenticed. The condition of the cottages here is generally bad. No attention is paid to ventilation. There is only one convenience to several cottages, and some few are totally unprovided with any. The morality is not good, but this arises chiefly from the custom of midnight courtships. I have tried allotments for the use of agricultural labourers, but they are little sought for and several are now vacant.

[I visited these allotments; they were in 28 divisions of about a rood each; in only one was there any appearance of cultivation; the others did not seem to have been touched since the summer and autumn crops had been taken off, and they were a tangled mass of weeds.]

The high rate of wages here renders labourers indifferent to the little profit to be derived from allotment cultivation. Some few years ago the Fell above Bootle was enclosed, and from three to four acres were set apart for cottage gardens, but not being close to the village the people would not avail themselves of them. I suppose the greatest distance from the furthest cottage in the village might be half a mile. The rent of these gardens would have been merely nominal. The reason of the indifference manifested in this instance was doubtless the high rate of wages which prevails, viz., from 3*s.* to 3*s.* 6*d.* a day. I have myself had to give 1*l.* 1*s.* a week to a common labourer on my glebe, and I expect to have to pay more.

4. *Mr. John Grice*, landowner and general merchant.—I am of opinion that farm servants, who are an especially favoured class, are not so provident now as they were 20 years ago. Higher wages have led to habits of expense. Both men and women spend more upon dress than formerly, and the facilities for travelling have produced unsettled habits. There is less saving and more dissipation, particularly during the "terms." Married agricultural labourers are in receipt of good wages, but they are often indifferent to the education of their children however good the schools. I am decidedly in favour of a compulsory system of education, but the charge should be borne by the Consolidated Fund. Local rates would introduce an element of discord into every parish; and there would be no guarantee for the schools being efficiently conducted but a system of Government inspection twice a year.

Boys and girls are a good deal employed in this neighbourhood in the turnip season, but not many under 13 years of age. Turnips are thinned by hand, and generally by piecework at so much per 100 yards, the turnips being sown in drills. When properly taught three children will single an acre a day by hand quicker than the same number of women with the hoe; this work is done principally in June, so that it does not materially interfere with the children's schooling, the holidays here being in that month. There are three good schools here, partly endowed, but assisted by subscriptions; children generally leave at 12 years of age, but some remain till 14. From 80*l.* to 100*l.* a year ought to be the minimum income of a country schoolmaster. All endowments should be given up to the State to form a general fund. In too many cases endowments are grossly misapplied where they have outgrown the donors objects.

Cumberland and Westmorland are models in regard to labour; all are well employed, and good workmen get wages ranging from 15*s.* to 20*s.* a week. There is not that difference which exists in the south between employers and employed; you will find no labourer touch his hat to you in this county, and the last resource is to go to the workhouse. A spirit of independence prevails from their never having been pauperized, and being well and fairly paid for their labour, and the foremen and farmers look well after them.

5. *Rear Admiral Scott.*—The rate of wages in this district (Gosforth) is very high. A head farm servant gets 28*l.* a year, with board, lodging, and his washing done for him. Day labourers get 18*s.* a week, but the principal labour of the farms is done by servants hired half-yearly. I think the immorality for which this county has a bad repute is attributable chiefly to the half-yearly hiring fairs and to the frequent balls which are held throughout the year for the entertainment of the working classes. Girls who are taught nothing else are taught to dance, and the dancing master is as regular in his visits from house to house as the tax collector. The dress of servant girls and farmers' daughters is alike on these occasions, and resembles that of the higher classes as nearly as possible. The education of boys is better attended to on the whole than that of girls.

The "statesmen," of whom there are a considerable number in this parish, are diminishing gradually; many causes are tending to their gradual extinction. The high price of land tempts some to sell their paternal estates, which are generally heavily incumbered, and they either emigrate or seek some more profitable investment for their little capital in business. It is remarkable that a statesman who has emigrated, if successful, always returns to and settles again in his native district.

Farm labourers occasionally become tenant farmers with a very small capital to begin with, and that often borrowed. Sometimes they venture to take a small farm without any capital at all, and as they work very hard they succeed; there is a spirit of clanship among them which induces them to help one another.

Women will not labour in the fields here, except in harvest time; wages are so high that they do not need such help for the maintenance of their families; for the same reason allotments of land are not required for agricultural labourers.

6. *Rev. James Albert Cheese*, rector of Gosforth.—Children are employed at almost all ages at certain times of the year, especially in harvest and the potato season, but they are principally thus employed on farms held by their parents. Women servants are employed at most of the farm houses to feed pigs and do other outdoor work. Unmarried women are thrown too much among men.

7. *Mr. J. Carter*, St. Bees.—I rent and farm an estate of 300 acres under the Earl of Lonsdale. A great improvement has taken place in the diet of farm servants within my remembrance, and it is impossible to conceive a class of persons better off than they now are. Labour in this district is affected by the proximity of iron and coal mines, and is yearly becoming scarcer and dearer. I get all my extra labour from this parish, but some of my neighbours have to procure it from Whitehaven, a distance of four miles. Women in the turnip season have to walk that distance to work. Boys are employed on my farm and the neighbouring ones for two or three months in summer in hoeing and thinning turnips, gathering weeds, or going with horses and carts in carrying manure from the manure heap to the field when it is being spread. Some girls of the same ages, viz., between 10 and 13, are employed in the same occupation, except going with the horses and carts. Women are sometimes employed in haymaking, hoeing turnips, spreading manure, and similar light work. So far from thinking it expedient to place any restriction upon the employment of women in agriculture it would be doing them a great kindness if we could find

them more employment. I pay my day labourers 18*s.* a week, and in addition I give to the more deserving permission to plant on my land sufficient potatoes for a year's consumption, they finding manure, which they are able to do by keeping a pig. There is no poverty in this district, all being employed at good wages, and the labourers generally give their children the benefit of education. We have good schools, both infant, National, and an endowed grammar school.

8. *Mr. J. Shirwin*, Seascales, Gosforth.—I am a "statesman," and my property, about 100 acres, which I farm, has been in my family for generations. I added 40 acres to it a few years ago and borrowed the money for the purpose, which I am gradually paying off. Men of my class more frequently part with their estates than add to them, which I attribute to their being overweighted with portions for younger children. It was formerly the practice for the smaller landed proprietors to bring up all their sons to the business of farming; the family property thus becomes insufficient to support them and it had to be mortgaged or sold. Now they are wiser, and put their younger sons to business in towns or seek clerkships for them. There was a time within my remembrance when all the county between this place and Ravenglass (15 miles) was owned by statesmen; now not a quarter of it is so. My son assists me on my estate, and will succeed to it. For the six summer months I have two men farm servants and a girl; in the winter only a girl; but we depend very much upon our own exertions. Labour is very difficult to procure. A neighbour of mine last year lost the whole of his turnip crop from not having been able to get labour for singling it. The women of Gosforth (three miles off) used formerly to go out in the summer to field labour, but they will not do so now, their husbands are too well off. If it were not for machinery it would be impossible to carry on the business of my farm. I have thrashing, reaping, and mowing machines, and I use a good deal of artificial manure. I make a fair maintenance out of my property and am saving money. I had very little education, but I have got on very well notwithstanding. I keep my own accounts, and I don't see that farming requires much more.

The farm servants and labouring class generally are very improvident. So far from saving money the majority run into debt. I have been often applied to by the creditors of my farm servants to pay their debts out of their wages, and I am often obliged to make advances to them. They certainly might save a great deal of money if they pleased, for there is nothing that they need to spend their wages upon but clothes. They occasionally become small tenant farmers, but small estates of from 30 to 40 acres are now difficult to get, though they were once plentiful enough. I myself put a young farm servant (a "chance child") into a small farm of 40 acres, and lent him 50*l.* to start with. I had a good opinion of his character, and he has repaid me my loan, and will in time be able to take a larger farm.

9. *Mr. J. Fox*, of St. Bees.—I rent and farm an estate of 300 acres, partly arable and partly pasture, under the Earl of Lonsdale. I employ a great deal of female labour in the turnip season and in harvest; 20 women are employed regularly in singling turnips; they come from Whitehaven, a distance of four miles, are on the ground at 8 a.m., and leave off work at 8 p.m., being allowed an hour for their dinner, which they bring with them; they are a low class of women, to whom the wages earned at that season are of importance, and without which they would probably be obliged to go to the workhouse; they come out to my farm to offer themselves, knowing that I have occasion for their labour; they are overlooked by one of my own men; they receive 1*s.* a day. I employ women to spread manure and to pull turnips, but I have never employed them to load dung carts. I also employ from 20 to 30 girls to weed green crops. I get them chiefly from the village of St. Bees, which is close to my farm.

The morality of the women farm servants in this county is very bad. I do all that is possible by my arrangements in the house to counteract it. I should be glad if the system of taking farm servants into the house could be changed, but I do not see how it is to be brought about. There are but few cottages, except in the vicinity of towns and in villages, and we are obliged to lodge and feed our workpeople. I have some married labourers who reside in St. Bees, to whom I give 11*s.* a week with their meals; and I allow them to plant potatoes on my land, which enables them to keep a pig.

I have known several of my farm servants save money, but it is the exception. There is not one that might not realize a little capital in a few years if he chose. Although small farms are not so numerous as they were, an industrious man of good character would find no difficulty in renting a small farm of from 40 to 50 acres. To work this he ought to possess capital equivalent to 5*l.* or 6*l.* an acre, if he has children to assist him, but if he is compelled to hire labour he would require more.

The means of education at St. Bees are very superior. A free grammar school, to which children are not admitted until they are seven years of age; but the poorest man's son may there obtain as good an education as the son of a gentleman. There is also an infant school and a National school for children under seven years of age, when they are transferred to the grammar school.

10. *Mr. Robert Jefferson*, of Preston Hall, deputy chairman of the board of guardians, Whitehaven.— I rent and farm an estate of 600 acres under the Earl of Lonsdale. The regular labour of my farm is done by eight hired men and two women, whom I board and lodge. The wages of the men are from 20*l.* to 30*l.* a year. The extra labour required is supplied chiefly by women and young boys. I employ at times as many as 60 of the former, and in turnip singling and in weeding crops from 20 to 30 boys and girls, whom I hire at Whitehaven; they are from nine to 13 years of age, and the time that I require them is chiefly during the months of May, June, and July. Women come out from Whitehaven, one and a half mile, to look for work, and I hire them without the intervention of a middleman or ganger, and pay them myself; the same with the children, they are all superintended by one of my own men. I cannot think that the work done by them is in any way injurious to their health. They work only nine hours in summer. Farm servants in this county are very favourably circumstanced for saving money. One of mine, who has been with me for 20 years, is now worth between 700*l.* and 800*l.*, which he has invested in a building society. He is still a farm servant. Another, to whom I pay 33*l.* a year in wages with a cottage rent free, and liberty to plant potatoes on my land, is worth 300*l.* Men who are provident can rent small farms if they wish and may do well upon them if they have a family to assist in the cultivation, but they cannot afford to hire labour. The risk which men with small capital run in taking farms often deters them from doing so; a loss of stock from epidemics, or a bad season, tells severely upon them. Saving money among agricultural labourers is not so common as it was.

11. *Mr. William Dickinson*, land agent, Workington.—I have been engaged between 40 and 50 years in the practice of my profession in Cumberland and Westmorland. The practice of employing women in agriculture has much diminished in this county since my first connexion with it. Children are preferred for singling turnips as they do it quicker; they are employed for that purpose in this neighbourhood. It is an employment which they like, and they look upon the turnip season as a sort of holiday, like the harvest. Women who work in the fields are, as a rule, either poor widows or single women in bad circumstances. They are never, in this neighbourhood at least, put to any heavier work than harvesting and turnip pulling. Their labour is of great importance

to the farmers from the great demand for adult male labour in the coal mines and iron works.

I consider that no class of the community is so well off as the farm servants and agricultural labourers of this county; they have the means, with common prudence, of attaining an early independence; those who save are, however, the exception. Formerly it was very different, and not many years ago one half of the tenant farmers of the county had once been farm servants, although wages were then much lower than they are now.

The sleeping accommodation in the farm-houses is better than it was, although in some places it still needs improvement. Nothing so bad is to be found now as I formerly witnessed in a farm-house belonging to one of the largest landed proprietors of the county, namely a room in which the men slept at one end and the women at the other without any separation between them. The rooms are now generally distinct and have different stairs. Neither men nor women are much under the control of their masters and mistresses. The hiring fairs are a great cause of immorality.

12. *Rev. Henry Curwen*, rector of Workington.—A considerable number of children are employed in agriculture for a portion of the year from this town. The colliers and men employed in the iron works and foundries are too well paid to need the earnings of their wives in field labour, but they send their children to the injury of their education. There are men in this place earning from 10*s.* to 14*s.* a day in the iron works who entirely neglect the education of their children, consequently a great many in this town are growing up no better than savages and heathens, and until a compulsory system of education is established it will continue to be so.

I attribute the high rate of illegitimacy in Cumberland in a great degree to the hiring fairs, which it would be most desirable to put an end to if possible; at the same time it would be hard to deprive farm servants of their half-yearly holidays at Whitsuntide and Martinmas. It is an old-established custom; it keeps up the family ties; and considering the isolated life these people lead in the farm-houses, and the very little intercourse they have with their fellow creatures, I consider such relaxation beneficial and desirable. I look to improved education for the gradual correction of the low tone of morals which unhappily prevails among the female peasantry of this county. I do not think that agricultural labour has any necessary tendency to degrade the female character; it has no such effect in Prussia or Belgium, in both of which countries it prevails to a much greater extent than in England. I attribute the difference entirely to education.

13. *Mr. W. Jenkinson*, of Schoose, near Workington.—I farm 400 acres. I employ boys and girls in singling turnips, but none under 9 years of age, and chiefly from 10 to 14. Women are also a good deal employed by me at certain seasons; they work with the children under the superintendence of one of my men. I do not know that any evil consequences ensue either to their morals or health from such employment.

I should be glad if the system of public hiring of farm servants at the half-yearly fairs could be put an end to. I think the farmers have it in their power by combination to do so. The subject is being much discussed in the farmers' clubs, and something will probably be done in the matter before long.

14. *Mr. Peter Crosthwaite*, of Monkhouse, near Keswick.—I farm 350 acres, chiefly pastoral, and breed and fatten sheep and cattle for the markets of Lancashire. This is not an agricultural district, but some oats and turnips are grown. Women are employed in thinning turnips and in harvesting, but not to any considerable extent; boys also are in request at certain seasons, but the greatest number so employed are the children of small farmers working for their parents. I cannot say what effect it has upon their education, but they are learning, while employed in field work, lessons as important to them in after life as reading and writing, and they are acquiring habits of labour and obedience. Our labourers in Cumberland are, I think, not to be equalled by those of any other part of England. We do not hire them as ploughmen or hedgers or ditchers, but as general labourers, and they are consequently always ready to turn their hands to any work that may be set them. Habits of saving are not so general as they were, and I think that high wages have produced a tendency to extravagance, but farm servants now spend less during their half-yearly holidays and more at other times; they dress better than formerly. Many save money enough to rent small farms, which are chiefly to be had in the dales where there is a right of pasture on the fells. With this advantage an industrious man can make a living off 20 acres. He must work his children, and probably may do so when they are too young; but on a small farm there is not much labour required during a considerable portion of the year, and there ought to be plenty of time left for education if schools are accessible. I pay 16*l.* half yearly to my head man, and from 7*l.* to 9*l.* to my other farm servants, with board. The day labourers I employ have 9*s.* a week, a cottage rent free, coals led, and ground for planting potatoes.

15. *Mr. Peter Harrison*, certificated master of Crosthwaite Endowed Free Grammar School.—The attendance at this school is greatly affected by the demand for the children's labour during three months in the year. From the 1st of July until October one-fourth are withdrawn by their parents. The earnings of the children are not necessary for the parents, for those who keep their children at school are certainly not in better circumstances than those who withdraw them. This fluctuating attendance has a most injurious effect upon the progress of the children. I have had a good deal of experience in the manufacturing districts where the half-time system is in force, and I can confidently state that children educated on that system make far greater progress than those who in country schools are absent for three or more months together. I am disinterested in saying so, for this being an endowed school not under Government inspection the amount of my salary does not depend upon the attendance of the children. I think a compulsory system is the only remedy for the present defective attendance in the rural districts. There is often no excuse for parental neglect for there is no poverty.

16. *Mr. John Rook*, Kiln Hill, farmer, Bassenthwaite.—Children are employed in light work, such as cutting down weeds and thinning turnips, from 12 to 14 years of age. Very few girls are employed as farm labourers, as they prefer going into domestic service, which they do at the age of 15 or thereabouts. The same may be said of women, their husbands are so well off that they prefer staying at home.

17. *Mr. Joshua Jenkinson*, of Arefield.—I own and farm an estate of 300 acres within the township of Cockermouth, chiefly arable land. I employ very few boys, and none under 14 years of age, and those chiefly for thinning turnips, and then only for a few days in the year. I employ women for weeding fallows, gathering stones, and hoeing turnips. A woman generally contracts to do a certain piece of work and takes her own time about it, employing her children, if she has any, to assist her, if not, she procures the assistance of other women who share the job between them. There is nothing in this neighbourhood of the agricultural public gang system. Our people are too independent to work under a middleman, and the children find employment at an early age in factories. Although Cockermouth is well supplied with schools, there are scores of young boys and girls running wild about the streets who have never received the smallest amount of education. Many parents are grossly neglectful, although they can obtain a good education for their children by paying 2*d.* a week for each; they will not make that sacrifice although earning good wages. I prefer, on the whole, the system of boarding and

Cumberland.

Mr. Henry Tremenheere.

A. 1.

lodging farm labourers to hiring and paying them by the day. I employ two or three of the latter, to whom I pay 9*s.* a week with their board and a cottage, worth perhaps 5*l.* a year, rent free. I cannot board my men under 7*s.* a week. Farm servants ought to save money; one of mine, who has been with me only two years, has already saved 40*l.*, but the practice of saving is the exception. In a few years a steady, thrifty man can easily accumulate sufficient capital to stock a farm of, say, from 40 or 50 acres, but it is essential that it should be in a district where he could have a right of pasture. In an arable country farming on so small a scale would be unprofitable.

18. *Mr. W. L. Alexander*, of Shatton Lodge, Embleton.—There is a great deal of women's labour employed in this neighbourhood. I have as many as 20 at a time in my employ, and twice that number of boys and girls from the age of 9 to 15; they come chiefly from Cockermouth, a distance of two and a half miles. The employment of women and boys and girls together is certainly objectionable, especially in turnip thinning, where the boys and girls go on their hands and knees, and I have no doubt that there is a great deal of improper conduct on these occasions. They are superintended by one of my labourers, but it is impossible that things should not occur which are very objectionable. The women are of a low class, and I certainly think it desirable that the sexes should be separated while at work, but nothing of the kind has been attempted in this district. This kind of work is sometimes paid for by the piece. I would place the age of boys to begin work at 14 years. One or two of my labourers to whom I spoke would fix 13 years, before which boys should not be permitted to work. They approve of restriction, but would find a difficulty in maintaining their families without the aid of their children's earnings. With regard to labourers, what we now want is skilled workmen. Machinery is gradually taking the place of manual labour, and we require intelligent men to direct it. I look forward to the time when almost every operation of the farm will be performed by steam; our grass and corn will be cut by steam machines; our lime and manure carted out by steam carriages. Horses will be very little needed, and the food formerly consumed by them will be available for cattle. Women do not load dung carts here, but in standing on the waggons at harvest time receiving and placing the sheaves, they are necessarily subject to some exposure. The hours of work for married women should be shortened. It would be better if no females were employed on the land; the occupation unsettles and unfits them for domestic life. If married, who is to prepare a comfortable meal for the husband against his return, and thus keeping him from the public-house? If a married woman is out working in the fields, who is to make clothes, and economise at home? Such women lose more by neglect of home duties than they earn in wages. The children are often injured in health and morals by being left in charge of neighbours, an elder brother or sister, or perhaps an aged and infirm relative; their labour also comes in competition with male labour. If females are permitted to work on the land it would be better if none were allowed to do so under 20 years of age, by which time they would probably have settled down in some feminine pursuit and feel neither the desire nor the necessity of out-door work. At the present time it is charity to employ many struggling creatures, widows for instance with families, or women whose husbands have forsaken them, also elderly single women who have worked the chief part of their life in the fields.

There is great inattention to the decencies of life, not only in many of the farm-houses but in the parish schools. I will mention an instance of the latter. In a place not far distant from this, when the schoolhouse was being rebuilt, it was proposed that there should be two conveniences, one for the boys another for the girls, but that proposition was rejected by a majority of the parishioners present. The matter was afterwards compromised by the majority yielding the point, but insisting that if there were to be two necessaries there should be but one approach to them.

19. *Mr. Pearson Clarke.*—I rent and farm two small estates of about 65 acres each, chiefly arable land. The chief part of agricultural labour in this neighbourhood is done by women and children; there is employment for them for nine months in the year. In February, if the weather is tolerably fine, stone-picking begins, then comes dibbling potatoes; in May and June the turnip thinning gives occupation to all the people that we can obtain; the hay harvest follows, then the corn harvest; after that time taking up potatoes and pulling turnips, which may last until the end of November or later. I have no doubt that the employment of women, boys, and girls in most of these occupations gives rise to immorality. They cannot be properly superintended, and after work, when they all return home together, they are necessarily free from all restraint. In turnip thinning, a woman, who is paid at the rate of 1*d.* for 100 yards, I have known earn 2*s.* 6*d.* a day. In other kinds of work we pay them then 1*s.* 3*d.* per day where they do not take piecework, which we prefer. Most of the women and children have to come long distances to work, from three, four, and five miles. They bring their dinners with them, which is seldom anything better than a piece of bread. Although not obliged to provide them with any food, I often send a supply of milk into the field for their use. Boys and girls can earn from 1*s.* to 1*s.* 8*d.* a day, and they are employed for six months in the year, certainly at the cost of their education. The reason that we have so much women and children labour here is that the manufactures of Cockermouth have declined of late years, and many families have been thrown out of employment.

There are great objections to the system which prevails in this county of hiring farm servants in the half-yearly markets or fairs. You never know until you have found out, perhaps to your cost, what sort of labourer you have agreed to hire for six months; he may be a ticket-of-leave man for anything you know to the contrary, or may be quite incapable of doing what he professes; but you have no remedy, you must either keep him for the term engaged and make the best of him, or discharge him and pay six months' wages. A change in this system would produce the best effect upon labourers, who now neither require nor care to obtain a character.

Cottages are our great want in this county. The system of boarding farm servants is, in my opinion, a bad one. I prefer married labourers; you then know your men, and have some guarantee for their character; but there are too many farmers, and those large ones too, who, so long as they get their work done, are indifferent who do it. Many farm-houses that I could mention, but would rather not, are still in a disgraceful state as to the separation of the sleeping rooms for men and women. We want cottages that labourers may marry and not multiply illegitimate children as they now do. The smallest farm any man ought to take is 100 acres, and he ought to have 300*l.* or 400*l.* capital and a year's rent, say, 150*l.*, in addition to begin with. Small statesmen may manage to live, but it is a poor living; they cannot save, and it is a struggle and a hard one. The public gang system was tried a few years since at Cockermouth, but owing to the death of the gangmaster it was abandoned. We have, however, something very like it, or perhaps worse.

Women, boys, and girls work together in the fields without any separation of the sexes, and with little supervision except to see that they do their work. Some of the women are of a low class. I think a regulation might enforce that the girls should leave work an hour earlier than the boys, the boys half an hour earlier than the women; they would thus return to their homes in separate parties.

20. *Mr. John Richardson*, land steward, Dovenby, Cockermouth.—There is a process going on in this

county which is tending gradually to increase the distance between the farmer and the labourer. Formerly they were on some degree of equality; the farm servant lived at the table of his employer, who exercised a sort of parental authority over him; now there is a tone of independence on the part of the labourers, who know that the farmers are dependent in a great degree on their services, and accordingly presume upon it. Wages are so high that both men and women servants are tempted to extravagance, and I think that saving is now the exception. I doubt whether it is desirable for farm labourers to become tenant farmers. In very rare instances only can they amass sufficient capital to enable them to take a farm exceeding 40 or 50 acres, and the tendency to the aggregation of farms is so decided that I am of opinion that the period is not far distant when such small holdings will be no longer available. The small statesmen are not and were never a thriving class; they manage to live and that is all, and no class leads a harder life; their diet is inferior to that of farm servants, and often to that of day labourers. Their extinction in this county is only a question of time.

Between Carlisle and Longtown, a district in which I was born, I can call to mind the names of thirty statesmen not one of whom now retains his land, the estates having passed into other hands. The decay of this class is partly owing to a deficiency in the means of keeping pace with modern improvements in agriculture, and partly to a wish to raise their families beyond their natural position. A statesman generally placed one son in the church; another would be established perhaps as a draper in some neighbouring town; a third as a clerk in a merchant's office; and the daughters were educated, not in the parish school, but in some third-class ladies' "establishment," and were taught the piano and ornamental needlework, and consequently became above the duties of the farm-house. To provide for children thus raised above their natural sphere capital was required, and the little property mortgaged, and the land which ought to have been cultivated by the united labour of the family fell into a bad state for want of proper attention and was eventually sold.

With respect to education I consider the small endowed schools, of which we have a great many in Cumberland, the worst description of schools that exist. The master is subject to very imperfect supervision by the trustees, and he feels that his salary, except for gross negligence, is secure.

Something has been done in my time to improve the arrangements in farm-houses for separating the male and female servants at night, and I have myself been instrumental in effecting a reform in this immediate locality, but there are still many farm-houses where the herding the servants together, which was once nearly universal, still prevails; but there must under any arrangement be great difficulty where a number of male and female servants are living under the same roof of guarding against the consequences.

The hiring fairs are a disgrace to a civilized country. In certain towns at Whitsuntide and Martinmas the streets are crowded with male and female servants packed together as closely as a flock of sheep and there is much difficulty in making way through the crowd.

21. *Mr. J. Robinson*, Low Houses, near Wigton.—I rent and farm about 1,400 acres, and employ many women and boys, but no boys under 14. They all come from Wigton, about a mile distant and are mostly uneducated. I pay boys from 6*d.* to 8*d.* a day; they are employed chiefly in the turnip season, hay and corn harvests, and in taking up potatoes. I employ about 14 women for eight or nine months in the year, and pay them 1*s.* 4*d.* a day. They are not particular as to the kind of work they do, and some of them are as strong as men. I employ no girls. The women and boys work together; one of my men sees that they do their work properly, but I don't think he troubles himself about aught else. I would rather have educated people on my farm than uneducated; and if two boys were to offer themselves for service, one of whom had been at school and the other not, I should prefer the former. I think it would be a very good thing if no boys were allowed by law to work until they had obtained a certificate from a Government inspector that they had been long enough at school to have learned to read and write. We shall not be able to get on long without a superior class of labourers who can work machinery properly. My farm servants (I have 11 in the house) have been only indifferently educated; two of them can write their names, but most can read a little. Wages are high, but labourers do not save as they ought. I pay my head man 32*l.* a year, and he ought not to spend more than 6*l.* or 8*l.* a year; but I doubt whether he saves a penny. We farmers have great difficulty in keeping our farm servants in order. They don't like being spoken to; they will snap their fingers at you and walk off and get another place immediately.

22. *Rev. J. S. Hodgson*, rector of Aikton.—Judging from the attendances of the school in my parish I think that there is now less employment for children in agriculture than formerly, and I do not think that in this immediate locality there are any abuses of that kind which call for legislation. In regard to women I hardly know how the evil is to be met except by gradually raising the female character by education. At the same time it must be admitted that from the high rate of wages now paid to farm servants and day labourers the farmer is strongly tempted to avail himself as much as possible of female labour. This however has become scarcer that it was from the disinclination of many women to go out to field work. In this particular district a considerable portion of the work of every farm is still done by women, who may be said to perform almost all the operations of husbandry but plough, and even that was formerly done by women occasionally. It is a regular part of their occupation to harrow, feed cattle, clean out byres, load dung carts, spread manure, gather stones, pull turnips, take up potatoes, and drive carts along the high road. Some of these occupations are certainly not so objectionable as others, but I have known a young woman die from a complaint which was produced by the hardships to which she was exposed while working in a farmyard.

The separation of the sexes in farm houses is not sufficiently attended to in this district, and I attribute the high rate of illegitimacy for which the county is notorious chiefly to this cause. Cottages also are generally in a bad state, often with earthen floors, and the accommodation is quite inadequate to the wants of a family. The village schools are generally mixed, and separate offices are rarely provided for the boys and girls.

23. *Mr. Robert Norman*, land agent and solicitor, and manager of the estates of Sir Wilfred Lawson, Bart., M. P.—A great portion of the farm work in this neighbourhood is done by women, I should say, including the occasional labour, quite one half. Women still harrow in the fields occasionally but not so much as they did; they also load dung carts, and assist in loading hay carts and stacking hay, both of which occupations I consider unsuitable to their sex.

Boys are not employed here for more than three months in the year, and generally at a season which includes their holidays; they are not employed before 13 years of age; I have certainly known them employed as young as 9, but that would be quite exceptional. I think it is very desirable that boys should not be permitted to work until they are 14 years of age unless they could produce a certificate of having attended school for a definite period or attained a certain amount of education.

I am opposed to the system of small farms, and therefore to encouraging labourers and farm servants to look to becoming tenant farmers. The money they can save must, except in very rare cases, necessarily be a very insufficient capital, except for farming on a very small scale. I can mention two instances in which

Cumberland.

Mr. Henry Tremenheere.

A. 1.

attempts to farm with inadequate capital failed. A servant of Sir Wilfred Lawson who had some money married a female servant in the same establishment who had also saved money, and their combined capital may have amounted to 700*l*. They took a farm, but have been anything but successful. In the other case the tenant of a small farm at Isill, who could scarcely manage to pay his rent and make a bare living, was induced to give it up. I then took it in hand, and by a judicious outlay on manure the production was so increased that it let afterwards for double the former rent. Small farms, in the hands of poor men, cannot be made to yield what they are capable of under a proper system of cultivation, therefore, although a small farmer may manage to obtain a living, the aggregate production of the country is less and the nation is so much the poorer. Small farmers, even if they possess the capital which a farm requires, are very timid in employing it. Such is the result of my experience as a land agent in this county.

24. *Mr. Thomas McMechan*, Wigton.—I am secretary of the Wigton Farmers' Club. I am of opinion that, taking into consideration the occasional labour employed, about one-third of the lighter descriptions of out-door work in this neighbourhood is performed by women; indeed, I do not see how cultivation could be carried on without their aid, in consequence of the deficiency of male labour. For many purposes female labour is much cheaper, and the wages thus earned by the women, who are of a poor class and generally in necessitous circumstances, are of importance to them and their families. Many of them are the wives of labourers at brickworks, on railways, &c. Children are employed on farms to a very small extent in this district, and I do not think that their occasional and partial employment in the summer and autumn interferes much with their education. This district is well supplied with schools, and as a rule they are well attended by the children of the agricultural labourers in the villages. I am of opinion that if boys were prohibited from following field labour until they had attained the age of 14—unless they had obtained a certificate of having attended school for a certain number of weeks in one year, or of having attained a certain proficiency in reading, writing, and arithmetic—it would be a beneficial regulation. This would not inconvenience the farmer much, and the effect would be to produce a more intelligent class of agricultural labourers. It would also be an inducement for parents to send their children to school at an early age.

I think the disposition to save money is increasing in the district, if I may judge from the increase of deposits by men and women servants in the Post Office and local Savings Banks. There seems to be more care and less disposition to spend money foolishly at the half-yearly fairs, which used formerly to be scenes of drinking and idleness to a far greater extent than is now the case. Now-a-days, too, the railways take away great numbers at the end of the day, and consequently there are fewer temptations to debauchery. These hiring fairs are a singular institution, and the standing on the streets of men and women with straws in their mouths to be hired for the half year, bears no little resemblance to a foreign slave market. The registry offices in various parts are doing much to diminish this kind of thing, and a resolution was passed by the district farmers' club to engage servants only through these offices, so that the character of the servants could be enquired into; as in most agricultural communities a somewhat low state of morals prevails amongst the servants, although I do not think this district compares unfavourably with any in the two counties of Cumberland or Westmorland. The change in the custom of the farmer and his wife having their meals with the servants has, I think, had an effect in making servants more careless, and rougher in their manners.

I think there is a great need of a better class of cottages for the labouring classes, but efforts are being made to supply the want. Mr. George Moore, who has done so much to encourage a better education in this district, has done his best also in this direction. Small cottages with four rooms, with gardens attached, would be a very valuable assistance to the improvement of the labouring class. Prizes both for the best cottage gardens and best kept cottages have been offered by Mr. Moore, and keenly contested for, in many cases where the means were of a very meagre description.

Generally speaking education is much advanced as compared with 12 or 20 years ago. A scheme of competitive examinations, devised and organized by Mr. G. Moore, has much contributed to this, as no child was allowed to compete for the prizes he offered for efficiency unless he had attended school a certain number of days in the year.

Small farms are numerous in Cumberland, but they are generally too small for the farmer to make more than a bare subsistence.

25. *Mr. William Hodgson*, master of the National school, Aspatria.—Children in this parish are not so much employed in agriculture as in some others; but I lose quite one quarter of my boys for three month in the year, and I cannot but say that their earnings are of importance to their parents, who are generally very poor. The boys go back greatly in their learning during their absence from school. I should say it took two months to bring a boy who had been absent from school three months up to his former acquirements. I have heard of the agricultural gang system. There are men in this village who I suppose would be called gangmasters, for they contract to do piecework, such as thinning turnips, and they hire and pay a number of women, boys, and girls for the job. I have frequently measured land for contract work done in this way. The women, boys, and girls all work together.

26. *Mr. John Grainger*, of Holm Cultram, landowner.—The characteristic of this district is that of small proprietors, whom we call statesmen, owning and farming from 80 to 150 acres. There are but few tenant farmers, which I attribute to the division of the lands of the great Abbey of Holm Cultram at the time of its dissolution among the tenants of small holdings, who thus acquired proprietary rights. The work is chiefly done by the owners and their families, and the cultivation, considering the small capital employed, is on the whole good. The occasional labour of women and boys is employed, but not to any great extent. Boys from 13 to 14 are employed for about three months in summer thinning turnips, making bands in harvest, and gathering potatoes. Girls are also employed in the same manner, but not so many as boys; both are often accompanied by their parents in piecework. The employment of women in field labour is gradually diminishing, and in this district they are only employed in light work. I should quite approve of a prohibition of the employment of children before 14 without a certificate of education, and I think it would operate most beneficially, and that in a short time the farmers would feel no inconvenience from it.

I should prefer to hire my labourers by the week, instead of keeping farm servants in my house, but the paucity of cottages is the difficulty. You cannot get married men, but they are more steady than unmarried, and you have a greater hold on them, and you have some guarantee for character and good conduct, which cannot be the case under our farm servant system, but I do not see the way to get rid of it. There is no doubt that it is the chief cause of the immorality of our county. A great many farmhouses are sadly deficient in proper arrangement of the sleeping apartments.

No class of men is more favourably circumstanced than the farm servants of this county for saving money. I have a man in my service who has saved 300*l*., and is about to invest it in building cottages. I think it very undesirable that such men should become small farmers; their capital in general is quite inadequate for good farming, and I am certain that

they lead much harder life as small tenants than as farm servants.

27. *Rev. Thomas Ashworth*, rector of Holm Cultram.—The farms in this neighbourhood are small, averaging about 100 acres. Boys and girls are only employed to a small extent in farm work of a lighter kind, and that principally in the company of their parents or friends in contract work; making bands in harvest, gathering potatoes, and sometimes reaping, from 13 and upwards. Women are not employed to a great extent, and only in light work, with some few exceptions, *i.e.*, the wives of married labourers, and only in the summer months, and even this seems to be lessening gradually under the influence of a higher civilization. The growing influence of public opinion is certainly producing its effect in this neighbourhood.

We are amply provided with schools. Early labour does certainly affect the attendance to some extent, but my influence is directed against it. In some cases of course indifference and improvidence prevail. The physical characteristics of the people of this district are good, but in common with too many of the rural districts of this county the moral tone is somewhat low; some improvement, however, has taken place in this respect within the last few years.

28. *Mr. John Galloway*, Moorhouse Hall, Burgh on Sands, landowner and occupier.—Most kinds of agricultural labour are performed by women in this parish, and some of them I consider decidedly objectionable, such as leading carts on the highway and occasionally loading dung carts, tending cattle, and cleaning out byers, frequently before daylight in winter, all of which occupations it is desirable women should be exempt from; but I do not see how the evil is to be prevented by law. Any enactment would most probably be disregarded or evaded, and a system of inspection would be as odious as it would be impracticable. I would rather trust to the gradual influence of time and education for a remedy. Boys and girls are also a good deal employed here, but seldom under 13 years of age. I would fix the age at 14, in order to secure a longer attendance at school. The better class of labourers educate their families; the poorer too often neglect that duty through indifference. I may mention a fact corroborative of this. A labourer in this parish stated that he could not afford to send his two children, aged 10 and 12, to school. An offer was made to pay for their education if he would allow them to go to the school, but he would not take advantage of it, and the children to this day remain without education. A great deal of farm work at particular seasons, such as turnip thining, is done here and in some of the adjoining parishes by the piece. We send carts to Carlisle when we want extra labour, and numbers of men (chiefly Irishmen), women, and children are brought out. After ascertaining their working qualities we select such as we consider the best; they then come daily a distance of four miles and return at night until the work is finished. With these men we associate a good many of women and children from the neighbouring villages, a practice which I think would be better avoided. There is no separation of the sexes while they are at work, and the people from the towns being generally of a low class too often use language which young people should not hear.

The cottages in this district are generally overcrowded and deficient in proper sleeping accommodation. The bedrooms have frequently no ventilation, the windows not opening. The drainage too is very imperfect, as is that of the farm yards.

The wages of farm servants are high; some, but not the majority, save. I know an instance of a boy who, soon after he became a farm servant at 14, put 10*s.* into the savings bank; he continued his deposits until they now amount to 400*l.*; he is now renting a small farm, keeps two horses, and is making money. It would be better, however, in my opinion, for farm servants to invest their savings on some good security, such as loans on local rates, &c., than risk it by taking a small farm. The losses to which they are liable from bad seasons and epidemics among stock may be their ruin. Many small farmers in this county will never recover from the consequences of the cattle plague. I think they are much better off by remaining in their original vocation as husbandmen. A small farmer must invest the whole of his capital in implements and stock; as servant he may employ a portion of it for the benefit of his family by putting them out to trades, and thus give them a chance of rising in the world. On a small farm all the children are required to work, and cannot rise above the condition of labourers. The statesmen with small properties of 40 or 50 acres are rapidly becoming extinct; they cannot hold their own against increasing competition, although those with larger estates may.

29. *Joseph James* (his four children, two boys and two girls, were employed in gathering stones in a field which he had agreed to clear by the piece). My eldest boy is 13, the youngest 6 years of age. The eldest boy has received some little education in a neighbouring school and can write a little on a slate and read figures. The eldest girl is 12, she has never been at school and does not know her letters, but has been taught to say her prayers. My wages, when in employment, are 15*s.* a week, but it is irregular and I cannot pay the charges of schooling; but "scholarship" is the only chance for children getting on in the world, and the thought of not being able to give it to my children often makes me unhappy.

30. *Sir Robert Brisco, Bart.*, magistrate.—I am an advocate for not permitting boys to work until they have obtained a certificate of having attended school for a certain time, and attained a certain amount of education, in fact for applying the principle of the Factory Acts so far as circumstances will admit to agriculture. Farmers will then be the most strenuous promoters of education, their interests being directly affected by it, and they will put a pressure upon the parents of children, which will be more effectual than all the exhortations of the clergyman. The parents often spend in drink what ought to go to the education of their children. I know an instance of a man who declares his inability to pay the school pence who weekly spends in beer enough to pay them twice over.

31. *Mr. Nicholas Wright*, Harrowby, farmer.—I employ no boys under 13 years of age, but can give them regular employment for five or six months in the year in thinning turnips, in harvest time, and in potato gathering; they work with the women and girls, whom I employ under the superintendence of one of my own men. The boys here go to school for about six months in the year, but not longer after they are 13, but they attend pretty regularly before that age. I think the superintendence which the women and children have when at work on my farm is sufficient to prevent any misconduct. The land I rent is cultivated by day labourers to whom I pay 13*s.* a week with a cottage rent free, with some other advantages, such as getting potatoes and milk for less than the market price. The whole is considered equivalent to 18*s.* a week. The farms in this district are small, but my own is an exception. One of the advantages of a large over a small farm is, that employment can generally be found for labourers throughout the year, and there is no temporary loss of wages. My men are employed without intermission both in winter and summer, "wet or dry," and they know exactly what they have to depend upon. On small farms the labour is far from being continuous, and the men often suffer great privations from interruptions in their work. The small statesmen, of whom there are some in this district, can only get a living by working very hard, in fact it may be said that they get it out of themselves as much as out of the land.

32. *Mr. W. Tinning*, Oakbank, Longtown.—I rent and farm an estate of 400 acres under Sir Frederick Graham, Bart. We depend in this district almost entirely upon female labour. With the exception of a few who go out to domestic service almost every

Cumberland.

Mr. Henry Tremenheere.

A. 1.

girl in this parish is brought up to husbandry. We could not possibly do without female labour. I do not think that the health of women suffers in any way from exposure in field work, on the contrary they are more robust, and when they marry they breed a hardy race. I do not say so much as to its effect upon their moral character, for they make bad housewives. Important as it is for us I doubt whether the labour of women benefits them much, taking the wear and tear of clothes, the neglect of children, and other circumstances into consideration. I believe it would be better for them if their services in agriculture could be dispensed with. The neglect of their homes and their children is most serious. I have even known a child lost in consequence of the long absence of its mother from home. We put them to every kind of work, but only on rare occasions to filling dung carts and cleaning out byres. I only employ four boys in the turnip season, who work with the women, and are superintended by one of my men and sometimes by myself. I am not aware of any evil results to morality. The immorality which prevails is, in my opinion, due to the farm servants being lodged together in farm-houses. I cultivate my farm by day labourers and their wives and families who live in cottages. When I hire a man I stipulate that if married his wife shall also work. Women lead carts here, but the farmers on the other side of the Border employ their women in ways that I should not think right. I pay my head man 8*s.* a week with his food and a cottage rent free; his wife earns 6*s.* a week, and the whole money wages earned by the family amounts to 100*l.* a year, yet they are always in debt, scarcely paying for any thing which they can get credit for, and if they were unemployed for a week they would be thrown upon the parish. I should entirely approve of a law which enforced school attendance up to a certain age, and that no child should work in husbandry until the age of 14, unless he had obtained a certificate of a certain proficiency in education. The period between 12 and 14 is the most important of a boy's life, and every effort should be made to keep him at school as long as possible.

33. *Mr. Matthew Brown*, land steward to Sir Frederick Graham, Bart., Netherby.—We depend very much here upon the labour of women, and farming could not be carried on without it; it is the principle occupation of the district, and without it many women would have to be supported by the parish; they are quite as serviceable in many kinds of labour as men, and there is employment for them almost throughout the year. Wages of women are 1*s.* per day. The scarcity of male adult labour is the cause of their being so largely employed. The farms in this district being large the labourers generally live in cottages, and farm servants are exceptional. Few boys are employed in this neighbourhood, and not many under 14 years of age, as they are found to be more idle than useful under that age. This part of Cumberland was in a very backward state as to education until about 12 years ago, when by local efforts, aided by Government assistance, a school was established, which has now nearly 200 on its books. I wish the attendance was more regular than it is; and I should quite approve of a system of indirect compulsory education so far that no child should be permitted to work in agriculture under 14 years of age unless he had obtained a certificate. The women can take care of themselves, but the State should take care that the children of the rising generation are properly brought up.

Farm servants have great opportunities of improving their position in this county. I know an instance of a man who at the age of 22, having 80*l.* or 100*l.*, rented a small farm, for which he paid 35*l.* a year; he now rents one at 350*l.* a year, and is making money; but small farms are every year becoming scarcer. There is a considerable number of the smaller statesmen remaining in the eastern part of Cumberland, but their farming is very bad owing to their want of capital and to their adherence to the system of their forefathers. What they extract from the soil is by dint of sheer hard labour, and by "racking;" they cannot treat the land fairly.

34. *Isabella Deans*, farm servant.—I am 27 years of age, and entered service at 17. I do all kinds of farm work, feed the pigs, milk the cows, and sometimes load dung carts; I have harrowed. The work of a female farm servant is very hard, up at 5 o'clock to feed the cattle and milk, and often not to bed before 11. I get 6*l.* for a half year; a good deal of it goes in clothes, which wear out fast in outdoor work. I do not clean out the byres; Scotch girls do it, but no girl hereabouts would. I had a child before I went to service.

35. *Mr. T. Gibbons*, Deputy Chairman of the Board of Guardians, Longtown.—I farm two estates, amounting in the whole to 1,300 acres, chiefly arable land. I board but do not lodge my labourers. I pay to my head man 20*l.* a year; with this he has a cottage rent free, half a ton of potatoes, 10 stone of flour instead of a Sunday dinner to save the trouble of preparing one. To my other men I pay 12*s.* a week, with a cottage free, half a ton of potatoes, 11 stone of flour, and 1*l.* extra at harvest time. All my men board in the house. The wives of all my labourers do farm work, although I do not stipulate for it, as is the custom with most of my neighbours; I pay them 1*s.* per day. The labour of women is most important, and could not be dispensed with here, but I avoid as much as possible putting them to work unsuitable to their sex. It is not the custom here to employ boys and girls, except at harvest time for making bands. I believe there is scarcely a woman in the neighbouring town (Longtown) who does not go out to field labour, and unless they did so they must necessarily be thrown upon the parish. The depression of hand-loom weaving has left the place in a very impoverished condition. This is one of the principal reasons why I do not use a reaping machine, I find that I can command an unlimited supply of female labour. There is no gang system here. My extra labourers are paid by the day. Boys are useful in harvest time to make bands, but I can state with confidence as the result of a long experience that no boy will ever make an efficient farm servant or agricultural labourer who does not begin to work at 14.

This parish was in a very low state as to education until 12 years ago, when a movement was made, of which the late Sir James Graham was at the head, for establishing a National shool, but there being a great many Presbyterians in the parish, considerable difficulty was experienced in settling the plan. It resulted in the school being a "United School," open to all denominations, and in which no definite doctrine is inculcated. This school is very successful, and is well attended; I may say that there is scarcely a child in the place who does not go to it. If a man applies for relief the guardians insist, if he has children, that a part of the allowance shall be applied to their schooling, and if he fails to comply with the condition the allowance is stopped. The immorality of this part of Cumberland is great. The union workhouse here is to a great extent merely a lying-in hospital. The evil is certainly not decreasing, and I am at a loss to know how it is to be combatted.

36. *Mr. J. Little*, The Gales, Gretna.—I rent and farm an estate of 400 acres, consisting almost entirely of arable land. I have 12 men farm servants, three boys between the ages of 10 and 18, and four female farm servants; in short I employ a great many women for eight months in the year, but I employ no boys under 13 years of age; I should not consider them worth their wages; all the extra work on my farm is better done by women, of whom there is an abundant supply in this neighbourhood. I pay my best men from 20*l.* to 24*l.* a year, and in addition to this they have their meals and cottages of three or four rooms with gardens rent free, and they can have the use of additional land for potatoes if they require it without paying rent for it. Some of the day labourers whom I employ receive 10*s.* a week and their food, but they

pay rent for their cottages; others receive 15*s.* a week without their food, but pay rent. There is nothing objectionable, I think, in the employment of women in agriculture as practised in this locality; I put them to no work that is above their strength, and they are willing to do almost anything. They may occasionally lead and load dung carts, but not often, and they help to pitch the sheaves of corn upon the stacks; they are fond of leading horses in carts, but I do not allow them to drive. The hardest work they are employed in is taking up potatoes. As a proof of the importance of the labour of women to their families I may mention that I last year paid one who worked for 20 weeks with her three daughters, aged 16, 17, and 18, 30*l.*; and had it not been for the money thus earned the whole family must have gone into the union workhouse, the husband having been disabled from working by illness, and was not a member of a benefit society.

I am of opinion that education is now the great desideratum. I infinitely prefer an educated to an uneducated labourer; he is more easily managed, and is more accessible to reason. There is a great deal to reform in our Cumberland system of farm servants; if the masters must have them in the house they ought to mix with them more freely, and they would find many opportunities of influencing them for good; they are now left a great deal too much to themselves. I endeavour to interest my labourers by lending them newspapers and books, and entering into conversation with them.

37. *Mr. William Thompson*, certificated schoolmaster, Corby.—Mine is a mixed school, supported by the Government grant and the children's school pence. From the beginning of March until the end of October the school is reduced by one-half; the elder children all leave for "barking," and the employment for them is continuous for six months. They leave in March; I never see their faces in the school again until the beginning of November or later. The parents of some of the children are poor, and possibly require the earnings of their children, but such is certainly not the case with the majority. Nothing but a compulsory system of education will abate this wrong. The education of children who are absent for so long as six months at a time is stationary; they make no progress after that, and might almost as well be taken from school altogether. It is very disheartening work.

38. *Mr. F. Graham*, land steward to H. Howard, Esq., Corby Castle.—This is a district of small properties and farms. The small statesmen are behindhand in everything, and deficient in capital for the proper cultivation of their land, and it is doubtful whether they would apply their money to it if they had any. I look upon this class of men as an obstacle to the progress of good farming, and they habitually employ their children in work when they ought to be at school. We have a good deal of employment for children hereabouts, and I have no doubt it interferes much with their education. I think no child ought to be permitted to work unless some security is given for its education. A law that no boy should be permitted to work in agriculture before 13 years of age would in my opinion be a beneficial one, and I would carry the principle so far that a certificate of having obtained a certain amount of elementary education should be the indispensable condition of employment. Cottages are our great want in this county, and until they are provided we cannot get rid of the objectionable practice of boarding and lodging the agricultural labourers in farm-houses; this is the cause of our high rate of illegitimacy, aggravated very frequently by the defective sleeping arrangements. The smaller class of statesmen are great offenders in this respect. In a great many places more cottages are required, and it would be a benefit to the farmers to have them built on their farms; at present they are chiefly in th villages, and often inconveniently placed.

39. *Mr. W. Hugill*, Brampton National boys' school, under Government inspection.—The number on my books is 167; the attendance reaches its minimum in September, when it is only 84. The boys are employed in April and May in picking stones and weeding, in June in thinning turnips, in July and August for the hay and corn harvest, in September in gathering bramble berries (blackberries), for which a market has within the last four years been opened at Newcastle. A boy can make from 3*s.* to 4*s.* a day, the berries being very plentiful in this locality. Five hundred pounds worth was sent off to Newcastle last year. One of the uses to which they are said to be applied is the manufacture of port wine. Some of my boys go out to thin turnips as young as 8 and 9. To some of the parents the earnings of their children is necessary, but to the majority I should say not. There are some hand-loom weavers here, who are very poor, and to whom a few shillings earned by their chilldren is of importance. They are not the children of necessitous parents who are the most irregular in their attendance. A benevolent gentleman in this neighbourhood, Mr. Head, of Rickerby, undertakes to pay the school pence for such children whose parents profess themselves unable from poverty to do so, but the attendance of these very children so paid for is far more irregular than that of other boys. I give as an instance that of a boy 10½ years of age, whose schooling is paid for; the attendance of this boy for seven weeks only amounted to five days. In another case where the school pence was also paid for the parents the attendance of a child in three months was 13 days. I find, generally speaking, that the attendance of the children of mechanics is the most regular.

40. *Mr. J. Robinson*, Brampton.—The women employed in agriculture in this district are not put to any work unsuitable to their sex; harvest work is the heaviest, potato-gathering perhaps the next. The potatoes are turned up by the plough, and the women detach them from the ridges with forks, they are then picked up by children. Women's wages here have risen from 1*s.* to 1*s.* 3*d.* a day, and female labour is getting scarce. Reckoning the labour of two women as equal to that of one man, the money wages of two women would be about the same, but men are not to be got. I think no child ought to be allowed to work in the fields before 10 years of age, and not then without having been at school; and I hope some measure will be passed by the Legislature to that effect. I attribute much of the immorality among the labouring classes of this county to the practice of night courting, and the custom of men leaving the farm-houses on Saturday evening and not returning home until Sunday morning. Farm servants are rather particular as to their dress when not employed; a smockfrock is not to be seen in all Cumberland; every man on Sundays and holidays wears broad cloth, and the girls go to balls in low dresses. They spend the greater part of their wages on dress, and it would be difficult to distinguish at church a farm servant girl from the daughter of her employer.

41. *Mr. John Ramshay*, Naworth, agent to the Earl of Carlisle.—Children are scarcely ever employed in this district under the age of 13, when they are found very useful in thinning turnips and other light work. I consider some out-door employment for a part of the year an important part of their education, and I do not think that here any restriction is necessary. It would be impossible to carry on the operations of husbandry without women, but their labour is becoming dearer every year; they are now receiving in this neighbourhood 1*s.* 6*d.* a day, while very recently they were paid only 1*s.*

The system of boarding and lodging the agricultural labourers in farm-houses is open to great objections, and is, I have no doubt, the cause of the high per-centage of illegitimacy; but there is not anything like a sufficient number of cottages for the agricultural population. In this parish there were none until the Earl of Carlisle built some; they have four rooms and cost 150*l.* each, but the labourers pay only 1*s.* 6*d.* per week, therefore it is not a remunera-

Cumberland.

Mr. Henry Tremenheere.

A. 1.

tive investment; but they were built from considerations of duty and propriety. There is a strong feeling growing up that the number of cottages should be increased, as the farm-servant system cannot endure much longer. The superior class of farmers would be glad of a change. Farmers who pay less than 200*l.* a year rent dine with their servants. The servants certainly are, if they are careful, well able to save money and to rise to the position of small farmers, and many do so, but I doubt whether it be for their interest. Small tenant farmers, however, do often succeed better than small proprietors who, although they work hard, cannot make up for want of capital. The advocates of small farms should visit this county and see their theories in practice.

42. *John Coulthard, Esq.*, Lanercost Abbey Farm.—I farm two considerable estates in this part of Cumberland, and get my turnips thinned chiefly by boys who are employed for that purpose for about three weeks in June. I prefer them to women, and they are cheaper, and do their work quicker and better by hand than women do by the hoe. I can get an acre of turnips thinned and weeded by boys for 4*s.* 6*d.* an acre, whereas the same done by women would cost 6*s.* 6*d.*

Cottages are our great want in this district and indeed throughout the county, but a large proportion of the land belongs to small proprietors who have not the means of building them. A great many of the existing cottages, particularly in the northern part of the county, are of the most wretched description, and will never be replaced by better until they tumble down from age.

43. *Eward Ridley* Lanercost, aged 20.—I am a farm servant. I first entered service when I was 10 years old, and did little odd jobs on the farm. I am now receiving 22*l.* a year with my food and lodging. It is a grand thing to be hired; if I had to live in a cottage I should spend all my wages in victuals and rent; now I can lay up, and I have only my clothes to pay for, and can afford a glass of ale when I wish it. I put 9*l.* into the savings bank every half year, and I have done so for some time, and have a good bit of money there. I do not spend the interest; I hope to take a small farm some day. Although I have not been to school since I was 10, I can read a newspaper and write a letter. There are three other men farm servants where I live and two lasses; they can all read and write a bit. I don't belong to a benefit society; I prefer putting my money in the savings bank.

44. *Mr. H. Forster*, Wetheral.—I farm an estate of 120 acres, all arable land. I get my turnips thinned by a man who contracts to do it by the acre, and who comes from Carlisle and brings people with him, men chiefly, and they lodge about the neighbourhood until the work is done. I get some of my harvest work done in the same way. I employ several women at 1*s.* 3*d.* a day. Our women in Cumberland are of a robuster race than the southern women, and they are more fitted for out-door labour. I think women ought not to load dung carts nor stand upon the ricks in harvest; it is not a proper position for them. Children are employed here at an earlier age than 10, some as young as 8 and 9. I should be glad if it could be prevented. No child ought to be allowed to labour until it had received some education. If a boy goes to school for six months in the year he would get as much education as is needed for his position in life, and there would be plenty of time left for work. It is not work that keeps children from school but neglect of parents.

45. *Mr. William Heskett*, land agent, Plumpton Hall, Penrith.—Women are not so much employed in this as in some other districts of Cumberland. I employ four for about nine months in the year, and pay them 1*s.* 6*d.* a day. They do most of the light and some of the heavy work on my farm; they attend the thrashing machine. A good deal of my work is done by contract. Boys are not so much employed here as women, but I should quite approve of a compulsory system of education to the extent that no child should be allowed to work under 10, and not until 14 unless he had acquired some education. I think nothing short of that will cure the indifference of parents, and that such a law would be well received by the farmers in general.

Cottages are much wanted, but if labourers were provided with cottages some farmers would still board their men to secure their efficiency as labourers. It is often found that those who live in cottages and provide for themselves are less able-bodied than farm servants.

46. *J. Hodgson, Esq.*, clerk of the peace for Cumberland.—There is no serious crime in this county, but the per-centage of illegitimacy is very high. The system of lodging the labourers in farm-houses is the root of the evil; the hiring fairs aggravate the mischief, and they are abominable nuisances. The employment of women in agriculture is diminishing, and it can scarcely, I think, be made the subject of legislative interference.

47. *William Hutchinson*, aged 13.—I live at Cumwhinton with my mother. I went to school when I was 9, and has been on and off ever since. I go when I likes and I stays away when I likes. I have not been to school for a month, and I have not been doing anything in particular. I can read a little but I cannot write, and I don't know no figures.

[This boy was idling about the village of Cumwhinton in a very dirty state, and I was told that his mother lives in a cottage of her own and keeps a cow and a pony.]

48. *James Stevens*, farm servant, Cumwhinton, aged 21.—I went to service at 14, and I now get 24*l.* a year with my board. Farm servants may save money if they are careful. From all that I have heard I think that we are better off than any other labourers. Hereabouts the farms are small and the farmers do the chief work by themselves and their families. There are few day labourers employed. Some men get work in the quarries of the neighbourhood. Women do the greatest part of the extra work on farms. They struck for higher wages last year in consequence of reading in the newspapers that they ought to do so, and by holding out they got an advance of 3*d.* a day; they are now paid 1*s.* 3*d.* I am saving money, but I do not think when I have enough I should like to risk it on a small farm. Small farmers here have to work very hard, and can barely make a living and pay their rent. I have seen enough of this not to care to be a farmer. Many of the farmers here can't keep a pair of horses.

49. *Mr. Andrew Wright*, High Crosby.—I am a statesman owning and farming 70 acres, and in addition I rent 70 acres. I cultivate the land chiefly by farm servants, with the occasional aid of women. Boys are very little employed until they go out to service at the age of 13 or 14, and girls less, and only during the turnip season. We are feeling the inconvenience of insufficient labour; the men go off to the mines and railways, and the boys get situations in shops or are apprenticed to trades. If it were not for women it would be impossible to carry on farming in this county. Wages are high and are likely to be higher. This is a district of small farms, few being more than 200 acres, and the greater number about 70 or 80. The small statesmen who have not land enough of their own to make a living generally rent some in addition; that is my case, and it is the reason of the competition which exists for small farms in this county. We have no private gangs hereabouts; each farm provides its own labour, and on a pinch the farmers assist one another.

50. Master of the Hayton parish school.—This is a mixed school under diocesan inspection, and is supported chiefly by H. Graham, Esq., of Edmond Castle. The numbers on the books are 130, and the attendance to-day, 8th March, is 100. Next month I shall lose a great many scholars, and by the 1st of May the whole of the two first classes will have gone and will not return before the end of October. This is very

disheartening to a master. The charges are very light, viz., 1*s.* a quarter for the children of agricultural labourers, 1*s.* 6*d.* for those of tradesmen and mechanics, 2*s.* 6*d.* for the children of tenant farmers, and 3*s.* 6*d.* for the children of statesmen. Boys and girls generally remain until they are 13 or 14, but in consequence of the irregularity of their attendance their education is not as advanced as it might be.

51. *Rev. W. C. P. Baylee*, vicar of Alston.—There is no outdoor employment for women in this part of Cumberland, which is entirely a pastoral and mining district. I doubt whether a plough is to be found in this parish. The boys find employment at the mines, but the managers will not take them before they are 13 years of age, when they are found useful in washing and preparing the lead ores; they are or ought to be at school without any intermission but the holidays, and would be so but for the indifference of their parents. The attendance is very fluctuating. There are but few statesmen in this part of Cumberland. The farms are chiefly held under Greenwich Hospital.

52. *Thomas Cooke*, master of the undenominational charity school of Alston.—Supported by voluntary contributions. The mining proprietors give 25*l.* a year and Greenwich Hospital 20*l.* The school fees are 1½ a week for all classes. There are 160 on the books, and the attendance is not affected by any demand for the labour of the children but purely by the parents not sending them to school. The children remain until they are 13 or 14, and if they attended regularly they would get a good education.

53. *Mr. Christopher Gatenby*, master of the Penrith Wesleyan school.—Mixed. Numbers on the books 256; boys 186, girls 70. The Wesleyan doctrine and catechism are taught, but very few of the parents of the children are Wesleyans. The school contains children of Roman Catholics. This school is very little affected by the employment of children in agriculture, about 30 only being absent for a short period for field labour. The school fees are 3*d.*, 4*d.*, or 6*d.* a week, not depending upon the age and the position of children in the school but upon the ability of the parents to pay. An annual subscription of 30*l.* is devoted to the payment for the children of the poorer classes, who are admitted at a reduced rate.

54. *E. W. Hasell, Esq.*, Dalemain, chairman of quarter sessions for Cumberland and Westmorland.—Crime in these counties is very slight, and such serious offences as burglary are chiefly committed by tramps. It would be very difficult to interfere by legislation with the labour of women in agriculture. In my immediate district there are no abuses calling for it. I do not think that children are put to work at too early an age or are, in this county, overworked. I have been in the habit of employing a gang from Penrith in the turnip season, composed of women, boys, and girls, who are brought out in carts. The Act for the regulation of agrigultural gangs having been brought to my notice I shall see that its requirements are enforced. I have had ample opportunities of comparing the agricultural labourers of Cumberland with those of most other counties, and in intelligence and efficiency they surpass them all. In the south the labourer is a mere unreasoning machine. In work such as draining I have often been benefitted by the advice of my labourers. Their superiority does not arise so much from education as from natural ability and habits of observation. The system of lodging farm labourers in the farm-houses is undoubtedly the cause of much immorality, and as long as the system exists there will be no diminution in the high rate of illigetimacy in Cumberland and Westmorland.

Cottages for the agricultural class are greatly needed. Men could then marry, which, owing to the difficulty in obtaining suitable accommodation, they are now reluctant to do.

I do not think that labourers in this part of the county care much for gardens, although many have small ones attached to their cottages. The allotment system is not applicable to this county, so large a proportion of agricultural work being done by farm servants. The wages of day labourers are so high that they do not feel the necessity of cultivating a piece of ground for themselves. They prefer taking their ease and rest after their day's work. I am convinced that if I were to offer a piece of land for allotments, which I should be perfectly willing to do if I thought there was any probability of its being accepted, there would not be a single applicant.

55. *John Crosby.*—I reside at Penrith and am a gangmaster. I have followed this employment for 20 years, and get my living by it. There are many men and several women in this town who follow the same business. Most of the work of the large farms within 9 or 10 miles from this place is done by gangs. We begin to take them out about the middle or end of March, and there is pretty regular employment for them until the end of November. There are quite 300 women who get their living here by working in gangs. The work which I take by contract is spreading manure, setting potatoes, hoeing turnips, clearing land of weeds, getting in hay and corn, gathering potatoes, pulling turnips, &c. The gangs vary from 20 to 60. About as many boys and girls are employed in them as women. The largest gangs are those used in turnip thinning, which may last for three weeks. I pay women 1*s.* 6*d.* a day and boys and girls 9*d.* I never take any under 9 years of age. I contract to thin turnips for from 5*s.* 6*d.* to 6*s.* an acre, spreading manure for 2*s.* 6*d.* an acre, and taking up potatoes 1*l.* an acre. Some of the farms where I work are so distant that we cannot get on the ground before 9 a.m., although the farmers send carts to convey the gang part of the distance; they meet us on the road, perhaps, about half way. I have never thought of separating the men and women workers from the children. There is a good deal of bad conduct among them, and I have turned off some of my best workers, men as well as women, for swearing and using foul language before the children. I never heard till now that gangs were put under any regulations by law. I shall in future conform to the Act. The gangs are increasing in numbers here. There are a great many women who can get no other employment. I have known 50 cart loads of young men, women, and children leave Penrith of a morning, but that was before the reaping machine came into use.

56. *James Burrell*, Penrith.—I have been a gangmaster for 11 years. The largest gang I have had is 30, composed chiefly of women, but with some boys and girls, but none, I think, under 10 years of age. The greatest distance I have ever gone with my gang is 10 miles, but the farmers sent their carts within a mile or two of Penrith to meet us. I keep good order in my gang, but the women are most difficult to manage. I dismissed one woman for bad conduct, and she has now a gang of her own. The boys in my gang are from 13 up to 17 and 18 years of age. I could easier manage a gang of 30 boys than five women.

57. *Mr. Thomas Bowstead*, land steward to Sir George Musgrave, Bart., Edenhall.—Women are a good deal employed on the farms belonging to Sir George Musgrave, but not in any degrading work, such as loading dung carts. I think it very objectionable that women should stand upon the hay and corn ricks to tread down the hay and arrange sheaves. Women in the parts of Cumberland with which I am best acquainted have little to complain of, and their labour is equally beneficial to themselves and their employers. As you approach the Scottish border it is different, where women are required to do many things that we should consider objectionable.

58. *Mr. John Barker*, land steward to H. P. Howard, Esq., Greystoke Castle.—Women are less employed in this part of Cumberland than they were within my recollection. Although I have seen women harrowing and filling dung carts such practices have been discontinued. With respect to juvenile labour I do not think it desirable to place any legislative restriction on the age at which boys should be permitted to work. The sooner they are habituated to

Cumberland.

1.

handle their tools the more expert and valuable workmen they become in after life. Children are not overworked in this part of the country; they have plenty of time for education; and what can be more conducive to their health than being much in the air in fine weather? It expands their bodies, gives muscularity, and initiates them into the processes by which they ultimately have to gain their living. Their earnings are also of importance to their parents. In this uncertain climate it requires all the hands that can be made available for securing the crops. If restrictions were imposed they would be injurious both to the employers and employed, and would be very distasteful to both. There is no analogy between the employment of women and children in husbandry and in factories.

I think that a law requiring a certificate of a certain amount of school attendance and proficiency in education would be very much objected to by employers. The rural population is diminishing, and we are in need of all the labour that we can obtain. Education will be carried too far if it deprives us of our agricultural labourers. Every lad who has obtained a little more education than his fellows naturally looks to better his position in life. A reading room was opened at Greystoke a year or two ago for agricultural labourers, but it was not supported.

Our farms are generally small, and Mr. Howard does not approve of converting them into larger holdings; he is desirous of affording as many facilities as possible to farm servants for becoming tenant farmers. Large farms are more scientifically cultivated, but small farmers apply all their energies to the work.

59. *Mr. Joseph Relf*, Kirkoswald.—I rent and farm an estate of 419 acres. The whole of my work is done by my farm servants with the exception of turnip hoeing and harvesting, when I require extra labour, which I obtain from Kirkoswald. Two or three women with their families are always ready to assist, and I hire them separately and pay them myself. There is not one-half the number of women employed in agricultural labour here that there was 20 years ago. I never employ children under 10 years of age. I approve of education. All my farm servants (six) can read and write, though not all, perhaps, very well. There will be a deal of difference in the next generation. The more intelligent labourers are the more valuable they are. If education was general the lads would stay in their parishes, because there would be no particular demand for them in the towns, for all would be on an equality.

Most of the cottages here have small gardens, and many people who have not gardens attached to their houses rent them. Some are let by public auction every year. Gardening is very much delighted in on account of the flower and vegetable shows which are held at Kirkoswald.

60. *Mr. J. H. Thompson*, master of the Penrith boys' National school.—On an average about one-third of this school are absent from April to September, employed in field work; the parents being generally poor the earnings of the children are important. Most of the children remain till 13, and sometimes until 15 and 16. There are a great many children in this town who do not go to any school, and who have not the excuse of work; they are idling about the streets all day. Much has been done in bringing children to this school by moral influence. I make a practice of visiting the parents and trying to induce them to send their children regularly, in many cases with the best effect. We have a rule which is found to work very well. "If any child makes a practice of coming late or be absent without permission for several days, a form of inquiry will be sent requiring a reason from the parents. If this form is not returned the child will not be allowed again to attend the school until the paper has been filled up and returned." In cases of habitual non-attendance expulsion has been resorted to as an example. The employment of a child in field labour or other work is considered a sufficient excuse.

Cumberland.
Mr. Henry Tremenheere.

1. LETTER from Dr. TIFFEN of Wigton.

DEAR SIR, Wigton, 9th February 1869.

CHILDREN are usually employed in agricutural labour in this neighbourhood as soon as they are able to do anything, say from 9 or 10 years upwards. Women and girls are regularly employed in farm work, such as gathering stones, thinning turnips, hoeing potatoes, weeding corn, and occasionally in driving horses, harrowing ploughed land, carrying manure and corn. The distance they have to travel to and from their work may average about a mile, except in harvest time when it may be two or three miles. They are supposed to leave home for their work places about 7 a.m., commence work on their arrival, and continue till 12; recommence at 1, and continue work until 6 in summer, and then walk home. The health of the women and children is upon the whole good. Women do frequently suffer directly in consequence of exposure whilst engaged in their outdoor labour, but the children are in general ruddy and healthy. Their

education is poor and not generally in accordance with their opportunities, the children being too often, indeed, usually taken from school as soon as they are able to earn a few pence. Schools are sufficiently numerous, and with good teachers to enable agricultural labourers' children to acquire a fair amount of knowledge, if only they have time to devote to learning or were not removed so early to assist in earning a little money.

I am, &c.
ROBERT TIFFEN, M.D.

To J. Henry Tremenheere, Esq.,
Assistant Commissioner.

P.S. — The cottages occupied by the labouring classes in the country here are generally confined, damp, unhealthy dwellings, and very frequently overcrowded, father and mother, brothers and sisters often occupying the same apartment, with the usual result of such association, a low state of morality. There are, of course, exceptions as regards the dwellings, but not very many.

NOTE.—Illegitimate births in this district average about 16 per 100. R. T.

---

2. LETTER from Dr. TIFFEN of Wigton.

DEAR SIR, Wigton, 9th March 1869.

IN compliance with the request contained in your letter, dated 19th February, I beg to give you a few particulars of the *direct* effects of outdoor labour upon women, as observed by me. These are, first, ailments affecting menstruation; and, second, the pregnant state. Of the first I may mention amenorrhœa (stoppage of menstruation) and dysmenorrhœa (painful menstruation) as being produced by exposure to the hardships of weather during autumn and winter whilst menstruating; also menorrhagia (excessive menstruation), and as a consequence of this, in women who have borne children, we have prolapsus uteri (falling of the womb), where the woman is subjected to unusual exertion, as would arise in filling manure carts, loading corn or hay, &c. Each of these affections has its attendant diseases as consequences of the primary disturbance of the system. Of those ailments directly produced upon the pregnant state by outdoor labour, *abortion* in the early stages of the process and *premature labour* at a later period, with their consequent dangers, are the most prominent. I have seen each of these caused by a few hours' exertion in loading corn, or rather, perhaps, by the effort (repeated) made to reach the ground after the loading of a cart has been completed.

The foregoing instances of direct injury to the health of women engaged in outdoor labour are those I had in view at the time I made the remarks in my former communication which you refer to; but it is easy to understand how many other affections may be produced, though more indirectly, perhaps, in women by exposure and exertion of a kind not consonant with the peculiarities of the female constitution, which render women more susceptible of injury from these causes than men.

I am disposed to think the Legislature should prohibit the employment of women in any outdoor occupation requiring great physical exertion, or which is accompanied by long exposure to inclemency of weather. No woman should be allowed to load a cart of corn, hay, or other material which must be packed high above the ground, or to drive horses in harrowing, or in a thrashing machine. The employment of women in tending cattle, cleaning out byres, forking manure, &c. should be discountenanced, though these occupations may not be so injurious to the health of women as they are demoralizing to them, by exposing them to a too familiar association in such occupations with men.

I have no experience of the "gang system." It is not known in this part of the country.

I am, &c.
ROBERT TIFFEN.

To J. H. Tremenheere, Esq.

P.S.—It is perhaps foreign to your inquiry, but it may not be taken amiss if I direct your attention to two things which have impressed themselves upon my mind, viz., the employment of boys of tender years in brick and tile works, which is a common practice, and for long hours; the other matter is in connection with thrashing machines, viz., the practice of not protecting or enclosing the iron cog wheels which drive the thrashing part of a machine, and to which are attached the arms to which horses are harnessed as to an ordinary whirrey. I have seen several severe and preventible accidents arise through the want of such protection. R. T.

---

3. LETTER from the Rev. J. S. HODGSON, Rector of Aikton.

Rectory, Aikton,

MY DEAR SIR, 9th April 1869.

As in this county the plough is universally drawn by two horses abreast, ploughboys are not required, and there is no bird-tenting, consequently the only agricultural operations in which children are liable to be employed are picking up stones from the fields, weeding, and thinning turnips, and taking up potatoes. A labourer sometimes undertakes the performance of one of these operations in a particular field, and when he does so he employs all his family. In this way children of 8 or 9 years of age are sometimes at work, but the labour is only slight and not likely to injure the constitution; the operations themselves also last only a short time, and at other seasons of the year children in general attend school. In this way most of them are tolerably educated, and I cannot remember that during my incumbency here, which has extended over a period of more than 10 years, I have married any one who could not sign his or her name.

The school in this parish, in which are no children under 6 years of age, contained yesterday 139 children, and the following table shows their respective ages:—

	Boys.	Girls.	Total.
Between 6 and 7	4	4	8
„ 7 „ 8	10	10	20
„ 8 „ 9	9	10	19
„ 9 „ 10	8	5	13
„ 10 „ 11	18	10	28
„ 11 „ 12	10	7	17
„ 12 „ 13	9	3	12
„ 13 „ 14	10	6	16
Over 14	8	6	14
	78	61	139

I do not therefore think that in this neighbourhood there is any reason to complain that the children are injured by being made to perform hard work at too early an age.

With respect to women the case is different, and in this county they undoubtedly often perform work which is more appropriate to men. There is here no gleaning, but the women work with the men in reaping corn, and you can see them, as farm servants, loading dung carts, driving carts along the highways, harrowing, clearing cowhouses, and preparing food for cattle and pigs, which last operation involves wetting their clothes, and thus tends to the injury of their health. I am told, however, that at present women do not perform this sort of work so frequently as they used to do, and it may be hoped that the progress of education and general improvement will in time lead to women being only employed in that sort of work which properly belongs to them.

It is to be noticed that women who, as farm servants, have been employed in these laborious occupations, dislike indoor work, and in general refuse to engage themselves in gentlemen's families. They say that to work in a house makes their head ache, but no

Cumberland.

Mr. Henry Tremenheere.

B. 1.

doubt the true reason why they prefer the work of a farm servant is that in the latter occupation they have more liberty, and, when their work is done in the evening, are not required to give an account of the way in which they spend their time; and this circumstance is one of the worst evils attending the system. Delicacy of character is destroyed by the work they perform and the things they see in a farmyard, and having their evenings to themselves often leads to the birth of illegitimate children. The prevalence of this vice is also increased by the faulty construction of farmhouses and the insufficient accommodation which they afford. The rooms for the men and women are often imperfectly divided, and sometimes access to the one is through the other. I hope, however, that in this important particular the character of the country is improving, and the proportion of illegitimate to legitimate births gradually diminishing. In comparing the condition of the agricultural population in this district with that of the southern counties many remarkable differences strike the observer. Here there are no very large landed proprietors, and the clergy in general are poor; the consequence is that the people have to depend on themselves or their neighbours when they are sick or in distress, and are more ready to assist each other than southern labourers. I have asked a sick woman in the south if her neighbours did not help her, and have been told, no, because she could not afford to pay them. Such an answer can never be given in the north, for the people are always ready to assist each other in sickness, and never think of receiving pay for offices of kindness.

The labourers in the north are more independent in their character, and more open and self-asserting in their manner than those in the south. The southern labourer is very reserved and afraid of expressing an opinion, while he is deferential and submissive in his manner to those who are in better worldly circumstances than himself. The northern labourer, on the other hand, is independent and even rough in his manner, while he is ready to express his opinions as if he were rich. I have often known strangers express surprise at the northern labourers' freedom and independence of manner; but, on my own part, I am far from saying that his southern brother might not profitably take a leaf from him.

The mixture and interchange of classes which are perpetually taking place in this county have also a great influence on the character of the people. The farms are small, and it is a constant object of ambition with the farm servant to become a farmer. To that end he saves as much as he can, and when he has attained his object lives very poorly and works very hard to maintain his position. And as this labourer rises to the rank of a farmer so the younger sons of the small yeomen often sink into the condition of labourers by misfortune or misconduct, and in their fallen condition are not forgotten or neglected by their relations.

Thus the labourer altogether occupies a higher position here than in the south. He is actuated by ambition, and sometimes lives to attain the position of a farmer, while his ranks are recruited by accessions from the class of yeomen. It is also to be observed that the children of yeomen, farmers, and labourers frequent the same school and associate freely and equally with each other. I do not think this mixture a subject for regret; it raises the low and depresses the high, and perhaps makes the whole mass more accessible to the influences of civilization.

Yours, &c.

J. S. Hodgson.

J. Henry Tremenheere, Esq.,
Assistant Commissioner.

4. Extract from Rev. J. S. Hodgson's Address to the Farmers' Club, Wigton, on the Employment of Women.

"No man can deny that the soil is better cultivated now than it was in the time of our ancestors, and it must be evident to every one that we are much superior to them in all the material appliances of civilization; and I do not think that we need fear a comparison with them in questions of morality. In this last case the advantage is not so decided a one as in the subject of material progress, but still in my opinion the country on the whole has improved in this respect also. When, however, we direct our attention to particular classes we are driven to confess that in some departments we are worse and not better than our ancestors. Among the classes which have not improved, but have, on the whole, grown worse I fear we must include that of farm servants From all the inquiries I can make I am driven to the conclusion that at present farm servants are as a class worse than they were at the beginning of this century. If we acknowledge this to be the case, we may very properly inquire into the cause or causes of the deterioration, and try if we cannot discover a remedy for such a melancholy state of things. The wages of farm servants depend neither upon the price of corn nor the ability of the employer to pay them, but upon supply and demand. When there are many servants wanting to be hired and few people who require their services wages are low; when there are comparatively few servants seeking for places and many people wanting to engage them wages are high. Within the last quarter of a century two causes have been in operation tending to raise the price of labour; one has been increased employment in draining, making railways, and other works tending to material prosperity; the other cause is the immensely increased facility for emigration. So cheap and easy is now the passage across the Atlantic that the unoccupied lands in Canada may be almost said to form part of England, and to be a field in which the enterprising labourer may at all times find profitable employment. These two forces acting jointly upon the condition of the labourer have produced two effects; they have, as every farmer knows, raised wages, and also improved his position; he, then, is of more importance than he was, and in any dispute with his master does not care about being turned off, because he is tolerably certain of meeting with another engagement. Here, then, is a double reason which powerfully tends to diminish the influence of a farmer over his servant. At the last meeting of the society it was stated, by more than one speaker, that a change is now taking place in this country in the terms on which a farmer's family lives with his farm servants. Formerly, both in the north and south of England, the farmer's family and his servants lived on terms of perfect equality; they had their meals together, sat in the same rooms in the evening, and had the same pursuits and amusements. In the south, within the memory of men now living, an entire change has taken place, and the farmer's family neither eats nor sits with his farm servants. Often the sitting-room of the family is contrived with a window looking into the farm yard, so that the master can see what is going on without stirring from his seat. In this country the change has not been completed, but is now going on. The farmer's family does not live on terms of perfect familiarity with his farm servants; they have no longer the same pursuits and amusements, but they still have many things in common. Now I do not pronounce any opinion as to the superiority of perfect equality or perfect separation. Much may be said on both sides, but during the transition from one state to the other a peculiar difficulty exists. While it is going on the farmer has neither the authority which isolation produces, nor the obedience which arises from affection. The captain of a ship of war maintains his authority by living apart from his crew; the leader of free companions gains the obedience of his men by partaking of all their sports and pastimes, and being the first in every danger. In this country the farmer, from circumstances in which he is placed, can completely follow neither one plan nor the other, but often has to contend with the difficulties of both positions without the advantage of either. There is a third circumstance which has, I think, a very detrimental effect

upon the character of the farm servants of this country. We all know that in every country the character of man depends upon that of woman; and Arthur Young (a very high authority) tells us that it is always a mark of low civilization in a country where the agricultural work, which properly belongs to men, is performed by women. If the civilization of this country be measured by this test I fear it must be pronounced to be in a very low condition. We see women driving carts along the roads, harrowing in the fields, loading dung carts in farm yards, and performing other offices which must have a tendency to root out of their mind all purity, delicacy, and modesty. I have heard that women who have been thus employed on a farm cannot bear the confinement of household work, and prefer to the proper occupation of women those employments which in other counties, and even in the neighbouring county of Westmorland, are almost universally confined to men. If this be the case, a more positive condemnation of the system cannot be pronounced. It unfits women for their proper avocations, and disables them from exercising over men those softening influences which tend so much to improve and civilize us all. I cannot but think that every one of us ought to do his utmost to free Cumberland from the reproach of being remarkable among the counties of England for its barbarous treatment of women. You may say that barbarous is a strong word to use for this practice, but you are to remember that savage nations think war and the chase the appropriate employments of men, and throw the entire burden of their usual life upon the women, while the men during their stay at home pass their time in lazy indolence. As they become civilized men relieve women of part of the work of their establishments. But while women perform among us the laborious drudgery of our farms we have no right to claim a high state of civilization. Here I may mention the custom of engaging a married man to live as servant in a farmhouse, while his wife and family are living by themselves at a distance it may be of several miles. I have lived in several parts of England, and have never known this custom to prevail in any other county than this; and it is scarcely necessary to say, that in almost every point of view it is an exceedingly bad one. The man is totally prevented from looking after the education of his children, and is himself deprived of the ameliorating influence of intercourse with his wife and family. The children are brought up without the guidance of a father, and we cannot be surprised if they take to evil courses. The wife is deprived of the protection of her husband, and has often to throw herself upon the kindness of neighbours for those offices which she has the best right to expect from the man who has promised to love and cherish her. The custom, therefore, I think, ought to be abolished, and on every farm cottages provided in which the married men who are employed upon it may live with their families; and these cottages ought to have three bedrooms each, with proper convenience for cooking and cleaning; they ought also to be well lighted, and to be free from those clay floors which the poor women cannot keep free from defilements by washing. If male and female servants are boarded in the house it is essentially necessary that provision be made for the effective separation of the sexes; that this is not done in every farmhouse is a scandal to our common Christianity and civilization. Surely we have no right to place our fellow Christians in circumstances of positive temptation, and that is done if the sleeping apartments of the male servants are not effectively separated from those of the females. The frequency of illegitimate births may make some of us look upon the matter with comparative indifference; but this ought not to be the case. The evil itself is a very great one, and when we regard the enormous crimes of which it is too often the cause, every one of us may well do his best to diminish it."

WIGTON FARMERS' CLUB.

Cumberland.

B. 1.

The Employment of Women and Children in Agriculture.

The members of the Wigton Farmers' Club met on Tuesday May 11, 1869, at the King's Arms Hotel, Mr. William Norman, High Close, in the chair. There were present Mr. John Jennings, Thornby Villa; Mr. G. Carr, Silloth Farm; Mr. John Brockbank, Heathfield; Mr. John Grainger, Southerfield; Mr. John Brown, Wiggonby; Dr. Tiffen, Mr. S. Cartmell, Wigton; Mr. John Todd, Mireside; Mr. Hetherington, Brayton; Mr. Joseph Tordiff, Lessonhall; Mr. Fothergill, Uldale Hall; Mr. John Pearson, Langrigg; Mr. C. W. Wright, Drumleaning; Mr. John Carson, Roundhill; Mr. T. Messenger, Wheyrigg; Mr. T. Horne, Baggrow, &c. &c.

The business of the meeting was to hear a paper read on "The Employment of Women and Children in Agriculture," by Mr. McMechan, who, on being introduced by the chairman, read as follows:—

"The question of the employment of women and children in agriculture is one which is just now attracting much attention, both of the legislature and of the farming community, who may be supposed to feel a deep interest in it. All who take an interest in the health, morality, and education of the agricultural labouring class too must view the subject with close interest. It is a subject which has been very generally discussed in Farmers' Clubs and Chambers of Agriculture, and very properly so, both as a question affecting farmers in view of a Bill which will I believe be shortly introduced into Parliament, and as being likely to elicit opinions which might be useful to the Commission now collecting information to prepare the Bill, the Commissioners being always glad to hear the opinions of bodies like Farmers' Clubs on the subject. At a recent meeting this club passed a resolution to discuss the subject, and a gentleman well qualified for the duty was asked to read a paper upon it. To the request of the committee he however declined, so at their solicitation I appear before you in his place. I may here mention that the reading through of the mass of evidence and papers I have had through my hands has shown me that the subject is one of an extensive, and I may add difficult series of questions, of which the mere "Employment of Women and Children in Agriculture" is but a very small part. In discussing this question it is impossible to avoid entering into the questions of the fitness of women for outdoor agricultural labour; of the propriety of employing them in a moral point of view, and also in a social and domestic point of view; of the fitness of children, of either sex, below a certain age, for being employed in outdoor agricultural work, in a sanitary point of view, but more particularly as regards their education, and this latter point is one to which the Commission I alluded to are directing great attention. I had the honour of being desired to give evidence before Mr. J. Henry Tremenheere, one of the Assistant Commissioners, and I may here take the opportunity of expressing my obligations to him for the information he gave me in preparing this paper, and for the papers he placed at my disposal.

"It would be impossible to treat of the question as regards the whole of the country, and it would be also undesirable; what we have to do at this club is to discuss it as it affects our own district and the county of Cumberland. I may however dismiss the gang question, as it is not a matter which concerns us in this district. I can hear of no cases of it being regularly carried out. In prosecuting their inquiries regarding the employment of women and children in gangs, the Commissioners found that a much larger number of children, young persons, and women are employed in what are known as "private gangs," and that there was as much need of legislation for private as for public gangs. It therefore became obvious that if legislation should be shown to be required for private gangs it would be impossible to leave out of view the women and children employed throughout the king-

Cumberland.

Mr. Henry Tremenheere.

dom in agricultural labour. A Commission was accordingly appointed in May 1867, to "inquire into and report on the employment of children, young persons, and women in agriculture, for the purpose of ascertaining to what extent and with what modifications the principles of the Factory Acts can be adopted for the regulation of such employment, and especially with a view to the better education of such children." The principles of the Acts which are applicable to this inquiry are the protection of the young and of females from excessive labour, and the requirement of a certain amount of school attendance for children between the ages of 8 and 13, earning wages; no one under 8 years of age being allowed to be employed.

"The Employment of Women.

"Objections have been raised by many to the employment of women in agricultural labour. It is true that many objectionable circumstances exist with regard to the employment of women in outdoor agricultural labour in many parts of the country, but on the whole in Cumberland, so far as I can ascertain, there is not much to complain of. 'On the whole,' I say, because in all cases of large employment of labour, whether male or female, indoor or outdoor, there will always occur instances of abuses. In this question I am strongly of opinion that any objections which can be urged against the employment of women and children in agriculture are not stronger than can be urged against any employment which takes women out of their houses for the day, except it be as regards their being employed indiscriminately amongst men. As regards their fitness for the work, all the inquiries I have made leads me to think that the women, in this part of Cumberland at least, are very rarely set to tasks which are improper for them. They are employed in spreading manure, in the potato and turnip fields, in picking stones, and at hay and reaping seasons. Their occupation is a healthy one, and will compare very favourably with that of the women in the factories, either as regards morality or healthiness. I speak now of the married and adult women; all the evidence I have come across tends to show that it is very undesirable for young women of less than 16 to 18 years of age to be employed, unless it be in the hay or corn field, when they are generally in company with other women. There can be no doubt but that they would be better at home attending to their domestic duties where married, but I do not think there are very many of the class who leave young children in the house, and it would at any rate be of little use staying at home, as one of them remarked, if they had nothing to feed their families with. The greater number of them are widows and middle-aged single women, to whom the wages are a livelihood, and who would find it next to impossible to find other employment. They make about 1*s.* 2*d.* per day, and have pretty regular employment in general. Their labour, too, is of importance to farmers, and I scarcely see how cultivation could be carried on without them. I find it is the case that women will not take unsuitable work, and will not work in wet weather. I do not think it is much the custom for women to be engaged in attending to horses, boys of 14 to 16 years of age being employed to look after them. As a class they are hardy, and I am sure any medical gentleman will bear testimony to their healthiness. They live very poorly and frugally, and I think as a class they are careful and steady in their habits. Women labourers have on the whole easier labour than female servants on those farms where they have to work out, as frequently the girls have to do outdoor work in the season during the day, and to perform their household work in the evenings and mornings after they have finished, or before they commence their outdoor labour. Gradually, however, there is a growing indisposition on the part of women servants to do this, and where women can be engaged by day, farmers seem to prefer engaging them. In many cases where there is cottage accommodation, farmers prefer to have their men servants out of the house, and the wife is generally provided with outdoor work in the season if she prefers it. This leads me to one very important matter which arises out of my subject, that is, the great deficiency there is in many places of proper cottage accommodation. Perhaps there are those present who can set me right if I am wrong, but it seems to me, from all I can learn, that this labourers' cottage question is a most vital part of the subject we are now discussing. I doubt that Cumberland is no exception to many other counties as regards cottage accommodation for the agricultural class, and I believe that a great reform is needed. In far too many instances the cottages are what are called 'clay daubies,' with clay walls, clay floors, and straw roofs. With no provision for ventilation, and with very little for decency. Not such places in fact as many here present would keep their favourite stock, horses or dogs, in. I have seen much of the cottage accommodation in this district at least, having been one of the judges to make the awards for Mr. Moore's prizes for some years. These prizes, I may mention, were given by Mr. George Moore, of Whitehall, every year in connexion with the Agricultural Society, in order to encourage a better state of things both internally and externally as regards the dwellings of the labouring classes. These prizes were I think conducive to the end the philanthropic giver had in view, but I fear the Agricultural Society showed some little apathy regarding them. Prizes were offered for the best-kept cottage, and for the best-kept cottager's garden. Mr. Moore paid every expense, judges, travelling expenses, &c., connected with them. Some disappointment was felt that the entries were so small, but I think this was a good deal on account of the feeling many of the cottagers had that their inconvenient cottages were of no use to enter for prizes. I think there is a growing disposition on the part of landlords to provide a better class of cottages on their farms, and I know of several instances where dwellings with proper accommodation have been provided with best results, both to the tenant and the landlord. A neat healthy cottage must tend to encourage a feeling of self-respect in the labourer, who will be all the better servant because himself and wife must value their advantages. Mr. Tremenheere told me that wherever inducements were held out to cottagers to pay more attention to their dwellings and gardens, by means of better buildings being provided, or prizes being offered for keeping them, it was attended with the best results. The style of living has very much changed within the last 50 or 60 years. The small holders have by slow degrees been obliged to leave their buildings; and labourers, who took their places in some respects, have changed their style of living without the proper means and appliances to do so. In the time of Queen Elizabeth an Act was passed which required that every cottage should have allotted to it four acres of land, and this Act was not repealed until the year 1775. From that time the condition of the agricultural labouring class has occupied much attention. The prices of the necessaries of life, the loss of privileges through the enclosure of commons, and to the loss of small portions of land which contributed to the labourer's resources have all told against him, and since the latter half of the eighteenth century it may be said that the condition of the labourer has been worse, even while wages have been advanced. I would not take a 'sentimental' view of the question, but in the face of pauperism increasing at the rate of 50 per cent., I think it behoves agriculturists, who pay the largest proportion of the rates, to look into the cause and try to remedy it.

"The Employment and Education of Children.

"I think I am not wrong in saying that in this district at any rate we have none or very few indeed of the abuses which the Commissioners have found to exist in many other places. I do not think it is the case here that children are put to tasks which are beyond their strength. The largest employer of this kind of labour tells me he would not allow a boy of

less than 14 years of age to work on his farm, and any employment of children there is to any extent will be in the harvest time, when it is a sort of holiday, and I am inclined to think a benefit to the children so employed. Now, as to schools accessible to the children, to the efficiency of the schools, and to the poverty of the parents. I will speak of the country schools first, as bearing most on the subject, and in this I do not fear contradiction when I say that we are very well supplied with schools, and think we may compare most favourably with almost any part of the two northern counties. In speaking of this part of my subject I have again to mention the exertions of Mr. George Moore, and at the risk of appearing somewhat complimentary to him, I must say that much of this state of things is owing to him. In Wigton and the neighbourhood are very good and well attended schools, but of the schools which are best known as 'Mr. Moore's group,' and those which he has largely benefited are those which must nearly concern our subject of to-day, it is of these I shall speak. It is now, I believe about 13 years since Mr. Moore conceived the idea of trying to improve the state of education of his native district, and commenced the system of competitive examinations which is now so well known. This system continued to be practised under Mr. Moore's auspices until the year 1867, when he thought it ought to be self-supporting, which in great part it now is. The schools which competed were 15 in number, which were attended by an average of 62 scholars, the largest number (Wigton) being 134, and the smallest Great Orton, 18. The total number of scholars attending these schools on the average was 934, and no pupil was allowed to compete who had not attended school 100 days, or 200 times. Of the 934 no fewer than 249 competed, or more than one quarter of the whole number. Prizes were offered for children of various ages, from 13 to 16, from 11 to 13, and under 11, so that the effect was to induce parents to send their children to school regularly, and also to send them to shool a longer time than they used to do; these are both very important points; they are indeed the very points to which the Commissioners and Assistant Commissioners are told in their instructions to direct their attention. Education in a town like Wigton would no doubt have been carefully attended to under any circumstances, but it is at least due to Mr. Moore to say that to his exertions it is in great part owing that education in the country districts in this neighbourhood is in so advanced a state. He has contributed towards the building or improvement of many of the schools, and in all of them his competitive scheme has tended to encourage the spirit of emulation which has made a very great change in the education of this district at any rate. A good school within a reasonable distance of farmers and labourers is one of the greatest advantages parents can have, and in Cumberland in general, and in this neighbourhood in particular, opportunities are not wanting through which what are termed 'the three R's' may be learned. Education has become a necessity among all classes. Every one now-a-days reads the newspaper, and as the boys and girls of the present day will be the men and women of the future it behoves everyone to see that their education is attended to. The 'Diocesan Prize Scheme' is taking the place of Mr. Moore's competitive examinations, but that the results are so beneficial cannot as yet be known.

"In concluding my paper I feel almost as if my conclusion was a 'conclusion in which nothing was concluded,' but I would respectfully submit to the club whether we might not express an opinion that so far as any abuses of the employment of women and children in this district are concerned no legislation is needed, but a better system of cottage accommodation is required for the labourer. That the education of the district is better than the average, but that some encouragement, stimulant in fact, is required both by parents and teachers. The Bill I spoke of contemplates I know the compulsory attendance at school so many days in the year of children of a certain age, but as I think this attendance is pretty generally kept up, such a Bill could not affect us. Any Bill which should much restrict or entirely prohibit the employment of women on the farm would be felt as a hardship. In leaving the subject in your hands, I can only say that it is one of much importance, at least as much as most of those we have considered. It is of importance to the community at large to have a healthy, moral, and contented set of labourers, and it is of importance to the farmer and the country that the land should be tilled by that labour which pays best. It always pays to pay well, and always pays to make it worth the while of a servant to remain with an employer. This in the case of an agricultural labourer will be best arrived at by providing him with a comfortable dwelling near to his work, and encouraging a good system of education for his children."

Mr. Grainger, of Southerfield, deprecated legislative interference with regard to the employment of women and children in agriculture. In Cumberland he did not think they could be charged with any impropriety in that respect. There was no employment more healthy, morally and physically, than light out-door work. As to children they might be put to work earlier than 14 years of age. He would advocate education if they could induce it, but not compulsory education. He admitted they were far back in regard to cottages, although not lower than other counties, but the cottages were in some degree improving. Why should not a woman join her wages to her husband's?

Dr. Tiffen objected to the employment of women in agriculture on account of the mixing of women with men in that labour, which put an end to modesty and delicacy of feeling. (Hear, hear.) He believed there was no district in the kingdom, including the manufacturing districts, where illegitimacy existed to the same or a greater extent than in that district. Every sixth child born in the Wigton district was illegitimate, and how many were born within the legitimate term he would not like to say. The mixing of men and women in outdoor labour was one cause of that, and the improper arrangement of the sleeping apartments in farmhouses was another. He believed a great improvement might be made in the moral and physical condition of the people by a more extended use of cottages. (Hear, hear.) He saw no objection in the way women were employed in that locality, but mentioned as an unseemly thing that he had seen a girl dragging a roller. As to education, if parents would not educate their children or could not pay for their education, the locality or district ought to contribute to their education. He thought the Factories Act might be very well applied to the employment of children in agriculture, so far as regards their education.

Mr. Fothergill differed from Dr. Tiffen as to the mixing of women with men in outdoor employment demoralising them. It struck him from what he had seen that indoor servants were more immoral. Dressmakers, who worked together by themselves, were the most immoral of women. He thought schools should be schools of industry. He agreed with Dr. Tiffen as to the difficulty of getting children to school, and said it was no charity paying for their education when a man was earning 3*s.* a day. The Act that was going to be passed certainly did not apply to the northern counties.

Mr. McMechan moved that that club was of opinion that so far as this county was concerned no legislative interference was required as to the employment of women and children in agriculture, but that in the case of children they thought the employment should be restricted to those above 12 or 13 years.

Dr. Tiffen did not agree with the resolution altogether. Women were employed in a way they would not think very hard, but which was objectionable as regarded their physical health. He referred more especially to the employment of women

Cumberland.

Mr. Henry Tremenheere.

B. 1.

in the loading of corn and hay. He disagreed with Mr. Fothergill as to the immorality of the sempstresses.

Mr. Carr thought legislation in not allowing children to work was not required. He would be glad if some legislation could be had whereby they could be kept at their work. Perhaps legislation as regards education might be beneficial, but to prevent children from working and helping their parents and being useful to farmers would be a step in the wrong direction.

Mr. Brockbank, referring to Dr. Tiffen's remark about the girl drawing a roller, said he heard Mr. Messenger say he had seen a woman yoked in a plough.

Mr. Messenger: It is a fact, in Bedfordshire—a man and a woman. (Laughter.)

Mr. Horne said it was scarcely fair to bring forward those exceptionable cases. He thought there was no necessity for legislative interference in this county. (Hear, hear.) If they could make young children from 12 to 14 years of age useful without hurting them bodily it would be wrong to pass a law to hinder them from working. As far as education was concerned he saw no need for legislation in that part of the country.

After a few observations from Mr. Grainger in support of giving young children light outdoor labour and as to the salutary effect of female labour in preventing women from "clashing" with their neighbours, Mr. McMechan proposed his resolution in an amended form :—

"That so far as this county is concerned this Club is of opinion that no legislative interference is required as to the employment of women and children in agriculture, and as to their education."

Mr. Horne seconded the resolution.

The Chairman, referring to Dr. Tiffen's remarks, denied that illegitimacy was the test of immorality. One would almost imagine from what Dr. Tiffen had said that immorality was greater in the country than in towns. He thought that under 12 years of age children were of very little use except at certain seasons. The Commissioners would fix some age, probably the same as in the Factory Act, and they would be obliged to stick to it, but it did not affect this county, and therefore he had great pleasure in supporting the motion.

The resolution was then agreed to unanimously.

---

6. Extract from a Lecture on Compulsory Education, by Thomas Ainsworth, Esq., read in the lecture room, Cleator Mills, Cumberland, on Wednesday, 14th February 1868.

"I have engaged to say something to-night on the subject of education, and not only of education, but of compulsory education. Now this word "compulsory" is a word disagreeable to every one, and to none more than to a free-born Briton, whether he be an Englishman, an Irishman, or a Scotchman. None of us like to be compelled to do anything ; but all of us are compelled, daily and hourly, to do something which, if we did not do, we must cease to live, or move, or have our being. If any man says "I won't eat," we all know he must very soon die. If he says "I won't "clothe myself," he will soon perish from cold. If a man says "I will have the loaf of bread which belongs "to my neighbour," the law says "You shall not ;" or if you do take it by force, the law, by force, will take you, and compel you either to restore the loaf of bread or put you under punishment for your transgression. If a man says "I won't support my children," the law says "You shall do so or go to prison." Now, you see, we are all compelled, daily and hourly, to do something for ourselves which either our physical or social constitution says is for the benefit of ourselves or society.

The clothing and feeding of his children is compulsory on every father; and I really doubt whether clothing and feeding the body or clothing and feeding the mind is most worthy of attention. Both are necessary and both are desirable ; and, since both are necessary and both are desirable, a parent should be compelled to provide both for his child. If the parent provides clothes and food for his child's body, the law does not interfere and clothe and feed the child ; and if the parent educates his child, neither should the law, even if a Compulsory Act were passed, interfere with him and instruct his child for him. But very ignorant and selfish parents will not educate their children ; sometimes, being ignorant themselves, they don't wish their children to know more than they do ; or, if lazy or selfish, they force the child to help to keep the family, or they appropriate what should be the school fee to buy, perhaps, an extra glass of grog in the week. In either of these cases the children grow up, in general, a trouble and annoyance to the very parents themselves, and also to their neighbours, and, as our calendars of criminals show, an expense to the community. If each man could keep his ignorant and dirty children entirely to himself, perhaps he might be allowed to take his own way : but if his children are to walk and talk with other people's children, then I say he is bound to make them something like other people's children; or, if he won't do so, then society, as I think, should step in and say, "You shall do so, or you "and your children must walk off," just as we said to the man who would take our loaf of bread without our consent. You will then clearly understand what I mean to express by compulsory education : it is, that, if a father will not do his duty in an educational point of view to his child, the law shall step in and make and compel him to do it, or do it for him and make him pay for it. Is it not better for a community to live on good and equal terms with one another ? If so, it is desirable that we should all be made to approach an equality, so as to live on good terms with each other ; and it is just when this higher social life commences that *good* education becomes of more consequence than *good* dress, which caused me to say, a short time ago, that I doubted whether clothing the body or clothing the mind was most worthy of attention. But this I do know, that if you take a youth at 18 with a well-clothed mind, he will soon be able to clothe his body by the powers of his mind ; and if you take an uninstructed youth of 18, clothed in purple and fine linen, he cannot clothe his mind with all his finery. Money cannot buy knowledge in a moment as money can buy clothes. Intelligence, the capital of the first boy, has been increased by the use of it to clothe himself ; mere dress, or money, the capital of the second boy, when spent is gone for ever.

I probably should not have been so great an advocate of compulsory education had I not been compelled myself to be a compulsory educator; but you all know that, from flax mills being under the Factory Act, I could not give employment to young children, from 8 to 13 years of age, unless those children were attending some school and receiving regular instruction. My doctrine is, that if a thing is worth doing at all it is worth doing well; and I therefore endeavoured to get a good teacher, who would be perfectly honest, teach well, and do his duty faithfully ; and I gave the best pledge of my good faith by putting a master to teach others whom I thought good enough to teach my own children. Well, what has been the result of this compulsory education ? The children, first of all, educate themselves, or, I should rather say, pay for their own education, and after doing so take home something to their parents, varying from 1*s.* 6*d.* to 2*s.* 8*d.* weekly. These children have been kept from much mischief, have acquired habits of industry and of good manners, and have learnt as much in their young days as will enable them to keep any books and accounts which they may be asked to keep should they obtain any situation as overlooker or manager in my works, or in any office or bank in the kingdom. Well, but the good did not end here nor with ourselves. Having a certain number of scholars that we could depend upon for regular attendance, it enabled us to show to the country round about what could be done by an industrious child if it attended school re-

gularly ; and as soon as the statesmen or farmers in this neighbourhood saw what these little children could do, they began to think it would never do for their children to be behind; and their boys and girls—yes, little boys and girls—would walk three or four miles to this school, would pay an amount of fee that never was heard of in this country before, and not for the sake of obtaining prizes—(for we give none)—nor an exhibition at some other school, but for the sake of knowledge itself.

I was once sitting at dinner next a Cambridge professor, and on this being told, he said to me, "How "did you bring about so desirable a state of things ?" "Merely," said I, "by being honest and truthful— "giving a good education, and *making people pay for "it*, and *calling things* by their *right names*. I know "that people never value anything they get for nothing, "and when they pay they will take care they get "something for their money. No father would let his "child walk four miles to school and four miles back— "eight miles—and pay 6*d*., 8*d*., or 10*d*. a week, as "the case may be, without getting something for his "money." * * * * *

These half-time children are taught that correctness, truthfulness, exactness, must be at the root of everything. This brings about a correctness in work and an order in discipline which return to them again in the shape of wages. Just look at the position we have been in, in this parish, during the last year. In Belgium, France, Ireland, Scotland, England, you all know the various flax mills have either been closed or working short time, while here we have been able to employ such extra hands as we could get in the neighbourhood, provided they could do the work as correctly, cleanly, faithfully, as our own workers. How happens this? I have no particular protection. As I told a friend at our meeting last winter, when I read my paper on co-operation, union, and combination, I have been repeatedly asked to join an association for fixing the prices of thread, and keeping up those prices. I told him then that I declined joining this union, and that I relied upon myself, not upon others. Well, three months ago I was asked by this same association, which was to have kept up prices, to *reduce prices*. My reply was, "I cannot do that ; I have "more to do than I can do, and why should I reduce "prices ?" If I reduce prices I must reduce wages, or sacrifice my profit ; I don't wish to have less profit, and I am sure you don't wish to have less wages. Well, now, talk this matter over among yourselves, and you will see that the true way to get good prices is to make good work. You cannot make good work with careless, ignorant, dishonest workmen. No ; you must have intelligence, truthfulness, discipline. Then you may obtain good and faithful work—no "scamp- "ing," as the navvy says ; and you will then be sure to obtain the highest prices going, and be most likely to have constant work, for, when bad trade comes, it is the bad work, the slop work, and the bad workmen who are the first to suffer.

About five years ago I was in Hamburg, and a friend, wishing to show me some civility, obtained permission for me to visit a celebrated coach works in that city. They made railway carriages for every continental railway, and had a great reputation. The principal showed me over the works himself, and when he came to the end he said, "Well, what do you "think of our work?" I replied, "You deserve your "reputation, but I suppose you use Swedish iron ?" "Oh, no," he replied, "it is English iron from Low "Moor, in Yorkshire." "Oh, then you use Liege "coal ?" "No," said he, "it is Newcastle coal." "Well," I said, "all your tools are from Leeds makers, "for I noticed their names upon them." "Yes," said he. "Then," said I, "where is the secret ?" "It is "our workmen," said he. "The English workman is "not what he was. We have not a man in our em- "ployment who will pass a bad piece of work ; and if "a flaw in the iron should show itself as the work "advances, he does not hide it, but shows it, and we "take care that he never suffers in his wages for his "honest conduct." Now, you clearly see in this what intelligence and good, sound, honest work can effect. An honest man needs no protection. His honesty protects him ; and if he relies on anything else he becomes a pauper in spirit, if not in purse.

Before I close I must say one word on a question which I know will be raised on this subject, and that is the religious teaching in schools. My own opinion is, that the introduction of this question has delayed the education of the country for the last thirty years. You all know there are two distinct and separate points in this word "religion." It embraces your duty towards God and your duty towards man. Now, the first of these is called theology, which to my mind is a question of age, experience, reflection, rather than of erudition ; and if so, children cannot comprehend it, and had better therefore not be troubled with a subject they cannot comprehend. The second—the duty to yourself and towards your fellow man—is the same in the English church, the Catholic church, the Methodist church, and all churches. Now, no school can be conducted satisfactorily to master, parents, or children, unless this latter branch be the foundation ; but then what does it comprise ? Nothing but inculcating those notions of truth, justice, kindness, &c. which the laws of our common country enforce. Therefore you must see that a master or mistress of a school is bound, in self-defence, to make these the very base of instruction. No one objects to this. But that does not reach the object some of these people have in view. The school is to be made to do the particular church's work. Now, this is not honest instruction, and it is the perversion of language to call such a place a *school*. This trick was tried upon us. Our master being a Scotchman, the Presbyterian minister from another parish rudely entered the school without permission, and came up to the master and said, "You have an excellent opportunity here of "teaching Scotch Presbyterianism." The reply was prompt and decisive : "This is a British school. I am "here to teach reading, writing, and arithmetic, and "there is the door." On the Saturday and Sunday let each clergyman take the children belonging to his own communion and indoctrinate them as he pleases ; but let the school be common ground — English ground—on which we can all meet on equal terms, and on this ground, and this ground only, no clergyman as such is permitted to enter our school-room. And this is not from any dislike of the subject of theology, for individually it is a subject to which I am very partial ; but then I feel I have no right to press my opinions upon another person, and further, think it a subject too sacred and too great to be tossed about in a child's school-room. This drawback to a general system of education would be done away with if the Prime Minister of this country would, from his place in Parliament, at once declare that no money should be granted for sectarian schools, and that he threw on the clergy of the various churches the responsibility of thwarting this solution of the religious question.

Now all these things which I have stated have not been done in a corner or in secret. They are open to the world ; and you know whether I have stated one single thing which is not a fact. When then the cry of education—compulsory education—got up through the country, I looked round with the hope that some startling fact would be shown us—some finely-devised scheme laid down. But no, not so. These Members of Parliament seem afraid of offending their constituents, and therefore they handle the question gingerly. They will not let the thing rest altogether, but they will go on saying some little thing about it, but are not honest enough and bold enough to say all they think. Last year they passed a Reform Bill, giving votes to a large number of uneducated people. Then they became frightened, and now say all must be educated, and we must have compulsory education. Well, so say I, but be honest about it—say out at once what you mean. But the English people don't like to be compelled. Give it up then. Oh, no, some-

Cumberland.

Mr. Henry Tremenheere.

B.
1.

thing must be done. Now I know my countrymen as well as any man, and I beg to tell the legislators this: treat them honestly and justly and they will go with you heartily; but try to play double with them and they will not credit you. Many years ago I was asked to become a candidate for the representation of Leeds, the education question then being the great matter under consideration. I declined the proposal, for I really had no pretensions to such an honour, but also because their views and mine on the subject were quite at variance—I holding to the system we have here, while they were for the voluntary scheme, small fees, and persuasion. I believe they have lived to see their plan will not answer. Men like to be treated as men and not as half-paupers. If a man is not as rich as his neighbour it does not follow that he is therefore mean. A poor man, if he is a man, likes to pay his way as well as a rich man, and sometimes even more freely. Then why tempt him to lose his position? Treat him fairly and honestly. Don't try to make money out of him. Don't bribe him to send his children to your school that you may convert them to your church. Give him a good teacher, and let him pay for his child's education as he would pay for his child's clothes or his food. I know that poor men are as sensitive on this point, and more so, than some who call themselves gentlemen. I wish there was more honesty and less charity in the world. But I will show you what the poor man has done. I remember some years ago travelling through Wales, and I came to Tan-y-Bwlch, where a Mrs. Oakley resided, who had done a great deal in the way of building schools, paying the teacher, and only charging a small school fee. I don't know that the teacher was a particularly bad one, but the Welsh have minds of their own, and they did not like this half-charity work, for there was the religious question in it. So the workmen in the slate quarries at Festiniog began to subscribe their money, built a school of their own, engaged a teacher, sent their children to him, and when I was there this independent and self-supporting school was full, and the half-charity school of Mrs. Oakley was comparatively empty. Men, real men, don't like this sort of half-charity thing; and I think it approaches to an insult to offer it, and, if accepted, the man is degraded, not raised in his own esteem. The other day a Member of Parliament said to me, "Oh, I suppose "you stop the school fee out of the worker's wages;" to which I replied, "I should not think of degrading "my people in that way. If the parent sends the "child to school he should then send the school pence "with the child, and not let the poor child appear to "its schoolfellows to be so inferior a person that it "cannot take its school pence as well as the others. "I know we have power, under the Factory Act, to "stop this fee out of the child's wages, but then why "resort to this compulsory mode when the parent will "do what is right if you will let him? I think such "conduct is low, vulgar, and degrading, and is just "one of those things which throw an establishment "into confusion and degrade all the men in it. I "don't wonder that there are quarrels and strikes be-"tween masters and men." Could a ruder and more vulgar thing be done than my stopping the school wage of a child out of the earnings of that child, just as if I doubted the child's or the father's honesty? If I did so I should expect to have a sulky, suspicious person in my employment. Do justly and you will receive justice; do unjustly or harshly and you will receive injustice and a harsh judgment in return.

From what has yet appeared it would seem that the tendency of feeling on this subject is in favour of taxing the community for the benefit of a few—of making the frugal, the honest, and industrious pay for the spending, the dishonest, or the idle; in fact, of pauperising those who are willing to be made paupers. Now I protest against this degradation of my country. There needs no great legislation on the subject. We have the machinery ready to our hand, and, to my mind, far better machinery than any I have as yet seen offered. If we are all honest on this subject, and merely want rudimentary instruction for the people, and are at the same time wishful to remove all difficulties, why not pass a law to this effect:—

1. No person shall receive any benefit, pecuniary or otherwise, from a child's labour under 13 years of age, unless such child is being educated as under the Factory Act.

2. When parents or guardians plead poverty then the school fees of such child shall be paid by the Board of Guardians as parochial relief.

3. The inspectors of the workhouse schools shall visit every school where these children are instructed, and, if the school is up to the required mark, allow the capitation grant.

4. If not, then withhold the grant for the first year; and if in the second year the teaching is still below the mark, then remove the children.

5. In this last extremity let Government assist in building a school, and let the ratepayers appoint a teacher, Government retaining the power to dismiss such teacher if not competent as shown in 4.

The *Pall Mall Gazette*, the only paper which to my mind has spoken out on this subject, has three objections to this scheme, to which I think I have most satisfactory replies:—

1st. There may be no suitable school within a proper distance.

Now, if a law were passed that no parent should receive any benefit from the labour of his child, as under the Factory Act, from 8 to 13 years of age, the child must attend some school for half the day if it is to labour at all. There would then be an increased number of children to educate, and the common rule of demand and supply would come into operation. There would be a demand for schoolmasters, and the masters would come when wanted. The quality might not at first be very good; but again, if the office of master were remunerative, which it ought to be, competition would soon put that matter right. In Scotland—and I wish our legislators would not forget that there is such a portion of Great Britain when they are legislating on this subject—it is no unusual thing for a young man to open, on his own account, what they there call a side school, in opposition to a bad teacher in a parish school; and, as you are aware, in each parish in Scotland there is an endowed school where the teacher has a schoolroom, a house and garden, and a small stipend; and if he be a bad teacher the children will pass his door, go to the side school, and pay a higher school fee—the side school teacher looking for his reward as sure to come, if he is a good teacher, in his appointment to some parish school. Within the last month I have received the following letters from a side school teacher, applying for a situation in my establishment:—

"I understand from Mr. McGregor that I am to write to you respecting the situation. I am in my 20th year, and have been always at school. I have had no experience in any office, or anything of that description except bookkeeping at school. I have an engagement just now at ——, and have to teach Latin, algebra, geometry, &c. My engagement expires at Whitsunday first, but I could get away before that time if necessary. It is only a side school kept up by a few farmers during the winter season. I can get a character, &c."

Not wishing to bring a youth so far south without being certain his circumstances would be improved, I wrote to ask what his school was doing for him. This is his reply:—

"I should prefer giving up the school, as, if it do succeed, it will only be carried on during the winter months, like other side schools hereabouts. As to my salary it would amount, say, from 1*l.* 15*s.* to 2*l.* per month."

The second objection is, that the child's wages make up a certain portion of the family income.

Now, no child between the ages of 8 and 13 can earn much wages by physical strength. If in an agricultural district, its labour will be most valuable in the summer and autumn months. Now, how do they

manage this in Scotland? In the summer months, in the Highlands, the schools are closed, and the masters and mistresses often take household or other duties, while the children work in the fields; but in the winter they meet again and go on with their education. In manufacturing districts the children can work half-time in some manufactory each day, and go to school the other half-day; and our schoolmaster tells me that he thinks the half-timers progress nearly as rapidly as the full-timers, for that he finds them fresher at their work, more vigorous, and frequently sharper than those who have no occupation. In this case the children would contribute something to the housekeeping and pay their own school wage. And here I must say a word or two—for what I have to say applies as much to Scotland as it does to England, if not more. It is not in country parishes that children are worse educated for want of schools, where labour is difficult to procure as well as schooling, but it is in *towns* where there are good workshops and plenty of schools. Let any Scotchman now present compare Glasgow with any country parish he knows in Scotland. He will admit it is the high price given for children's labour in towns which interferes with their schooling. It is the cupidity of parents—the money-grubbing of the parent who sends his child to work rather than educate him. Work is easy to be had, and money is easily spent in a town. The other day, in Manchester, I went into a telegraphic office to send a message. The child who was to transmit the message must, I think, have been lifted on to his stool. When I said to the clerk, "What is the age of that "boy?" "Oh," he replied, "he is very clever; he "can send the message quite well." "That," I said, "is not the reason for asking his age. I don't doubt "his cleverness." For the poor child was all intelligence and no body—all mind and no matter. The clerk then said, "He is about 9 years old." "The "shame is," I said, "that his father will allow him to "work. That boy should not leave school for five "years to come. Let the poor child play. This sale "of human flesh and blood by a parent at such early "years should be stopped by Act of Parliament."

The third objection is, that by taking care of the house the child enables the mother to earn wages.

You have heard the old proverb, "Better marry a "wife that saves a fortune than one who brings one." So in the poor man's house. A thrifty, managing wife is a fortune; and many families within my experience do I know where the wife's home-management nearly doubles the man's income. We discourage the employment of married women for that reason. A wife and mother's duty is at home; and she must be a poor wife, indeed, whose place can be supplied by a child of from 8 to 13 years of age.

I have now told you all I have to tell on this subject; but I do sincerely wish there may be found some wise legislator who will meet this question fairly, honestly, faithfully; that he will insist it shall be considered on its own merits, not on that of churches or creeds, with which it really has nothing to do; that he will protect the honest tradesman and the Christian father from being taxed to pay for the education of the idle, the profligate, or the selfish; and, lastly, that he will prevent pauperism eating into the very vitals of our common country."

---

7. Letter from Horace Wyndham, Esq., Cockermouth.

Dear Sir, Cockermouth, 7th Feb. 1869.

I beg to acknowledge the receipt of your letter of the 5th instant, which I received on my return from town.

As you remark the first questions upon the list have very little application to the neighbourhood of Cockermouth, where but a small proportion of the children, young persons, and women are employed in agriculture. When so employed I believe they are fairly paid, and well treated and probably find it the most healthful occupation they can engage in. In the course of a few days I shall fill up the paper you have sent me and forward it to the address on the back. The great evils from which the agricultural labouring classes, and the lower classes generally, suffer from are improperly constructed and ventilated dwellings, overcrowding, and want of education. The adoption of the Local Government Act in the township has done much to improve the condition of their dwellings, but further powers are required to buy up at a fair price the *sites and materials* of over-crowded and ill-constructed dwellings in order to build new ones upon a better system, and a better definition of the term "lodging-house," so as to bring all houses containing more than the members of one family under the provisions of the Lodging Houses' Act. The greatest evil of all, however, want of education, can only I believe be met by a system of compulsory education. My experience you will see is chiefly directed to the condition of the labouring classes in the town. There are, however, a few cottages occupied by agricultural labourers outside the township and in the small villages around us. As a rule they are in a very bad condition, with a few bright exceptions. The education of the children is better attended to by the labouring classes dwelling in the country districts than in the town.

Any further information you may require I shall be glad to give.

I am, &c.
Horace B. Wyndham.

J. H. Tremenheere, Esq.

---

8. Letter from Matthew Brown, Esq., Land Steward to Sir Frederick Graham, Bart.

Dear Sir, Scarbank, 5th April 1869.

In reply to yours of the 3rd inst. I may state that the effect of the enlargement of farms upon this estate has been to get rid of an excessive agricultural population occupying small parcels of land with very little capital, the produce of which was barely sufficient to keep and rear their families, the rents (small as they were) being badly paid, arrears having accumulated to upwards of 6,000*l.* The consolidation of farms has led to the introduction of a more intelligent class of tenantry with largely increased means, who are able and willing to do full justice to the land they occupy. I must observe, however, that many of the present tenants or their fathers were selected as the best and most improving of the original occupiers, and have had small farms added to them from time to time, as their means and other circumstances would permit. The effect of this aggregation has been to increase the rental of the estate upwards of 30 per cent., but this has been attended by a very large outlay on buildings, draining, and other improvements on the part of the landlord.

After 27 years' experience I have come to the conclusion that where you can command eligible tenants possessed of the requisite capital and skill, that good land is best and most economically managed in large farms of from 500*l.* to 1,000*l.* a year. On inferior soils, where labour and industry constitute a great portion of the capital employed, small farms of from 80 to 100 acres are admissible, and sometimes found to be advantageous and desirable, and I generally find such farms to be carefully and fairly managed; they are also the means of rearing an industrious body of tenantry who often become occupiers of larger and better farms. This system of enlargement has been steadily pursued up to the present time; the number of tenants is now rduced to 115, and hardly any of them occupy less than 80 acres, or 50*l.* a year. In an economical point of view the system has been attended with most beneficial results. There is no waste of labour or horse power and no excess of occupying population, whilst the tenants have been raised from poverty to comparative comfort and prosperity, and the productive powers of the soil has been greatly increased by improved cultivation.

Cumberland.

Mr. Henry Tremenheere.

B. 1.

I consider that a man and his family occupying from 20 to 50 acres of poor land, even at a small rent, is far worse off than an agricultural labourer or husbandman employed on a good sized farm.

The population of Longtown is about 2,300, and I should think that one half of the working females are employed in agriculture.

Yours faithfully,

MATTHEW BROWN.

J. H. Tremenheere, Esq.,
Assistant Commissioner.

9. LETTER from Rev. R. C. PATTENSON, Rector of MELMERBY.

Melmerby Rectory, Penrith,

DEAR SIR, April 27, 1869.

IN order fairly to answer the question contained in your letter of the 19th instant I have been making inquiries of various classes of people and I find that the general opinion, which coincides with my own, is this, that the number of small farms is sensibly diminishing, and that farm servants are not so disposed to lay by money for stocking a farm. In many cases they marry too early and settle down as labourers. It is very rare now to find a farm servant living two years together under the same master. This constant changing of service and their extravagance produce bad habits. Drinking amongst the men and fine dressing among the women keep great numbers, in spite of high wages, poor; wages are so good that it is not an unfrequent occurrence for men to refuse to hire for a term, *i.e.*, six months, preferring to live upon the wages of the previous term with the help of earnings from occasional work. A first-class labourer might compete as to fortune with a farm servant, but as a general rule he is not so well off (though often better than the small farmer), and if he has a family his prospect of saving money is very low. I think that the disposition to help himself by belonging to benefit clubs is extending amongst the agricultural labouring classes.

Farm servants were never so well off as they are now, but high wages and the love of change has, I fear, only produced extravagant and careless habits. A great deal of money, however, does find its way into the savings bank, but beyond this naked fact I can give no information. I generally on a Sunday have some of my people to dinner. On Sunday last I had two tenants on this estate, both were originally farm servants. A is 70 years old, and now occupies a farm at the rent of 370*l.*; B is 50, and holds a farm of 150*l.* per annum. A., the elder, lived 25 years under three masters, and B., the younger, 20 years under two masters. I read your questions to them and they considered that they could not *now* have taken farms upon their savings. Far more capital is now required to stock a farm than when they began, as labour is much more expensive. To state an instance:—A few weeks since a farmer wanted some barley thrashed, and though he offered 2*s.* a bushel, he could not obtain a man at the price. 30 years ago 6*d.* was the rate, but then thrashing machines were rare. I can remember when only five were in this whole district, and now we have six in this small parish alone. But not only is more capital required to stock a farm, but small farms are let at extravagant rents, and in the end (and I have seen many failures) become simply nests for poverty or sinks of the capital laid out upon them. The condition of a day labourer is far better than that of a small farmer with little capital. The day of small farms is over. They will die a lingering death, but their day is over. Even in the "Dales," where they are only "grass" farms, they are, I am told, decreasing, and, old tory as I am, I think their death is for the benefit of the nation. Free trade, and above all railroads, are their executioners, to say nothing of the increase of population and wealth and the non-increase of acreage in Great Britain. I do not know whether this letter will satisfy you, but if it is only bad enough to be worth making better I shall be ready to try and respond with a clearer voice.

I am, &c.,

ROBERT SAM. PATTENSON.

J. H. Tremenheere, Esq.,
Assistant Commissioner, &c. &c.

P.S.—I do not think the number of petty landowners is decreasing, but as the purchase value of land increases they must die out. It is astonishing what sums these men will give or borrow for land and what a price they will give for rent; it is almost their only idea of investing their money. No wonder that so many small statesmen are poor; poorer than small farmers; far more pinched than labourers.

---

10. LETTER from the CHIEF CONSTABLE of CUMBERLAND and WESTMORLAND.

Chief Constable's Office, Carlisle,

DEAR SIR, March 10, 1869.

REFERRING to your communication, dated the 12th ultimo, I enclose for your information copies of the reports I have received from four of the Cumberland divisions. Two others have yet to come in, and when they do they will be forwarded to you. Some little delay has necessarily elapsed since I received your letter, for it takes some time to have a careful inquiry made in all parts of a county.

As to the evils arising from the beer-house system nothing could be worse, and all the facts connected therewith have been fully laid before the Home Secretary, but I see he is reported to have stated that the Government don't intend to move in the matter this year. I think it would be therefore only mere loss of time to trouble you with any details in connection with so large a question.

I have no doubt that the great bulk of the crimes committed in these counties are traceable to vagrants, beer houses, and public houses; and if something could be done to place them under some stringent system, coupled with efficient supervision, great good would be conferred upon all classes of the community.

I send you papers on the vagrant subject. They will fully inform you how tramping mendicants are dealt with in these counties.

Believe me, &c.,

J. DUNNE,
Chief Constable of the Counties of Cumberland and Westmorland.

J. H. Tremenheere, Esq.,
Assistant Commissioner, &c. &c.

---

11. LETTER from GEORGE MOORE, Esq.

15, Kensington Palace Gardens,

SIR, March 5, 1869.

I HAVE had the favour of your letter this morning, and I beg to assure you I entirely sympathise with all the objects with which your Commission has to do. I should be glad of a personal interview with you, either any time when you are in London or during the autumn, when I hope to be in Cumberland. As for the employment of women in the fields, I think that in another generation this will gradually be discontinued, as I observe amongst the girls educated in the schools around my part of Cumberland that they show a decided aversion to field work, and it would only be by those whose character was lost or who had not been regularly to school that rough farm work would be chosen. In past years there was nothing done to civilise or indeed *humanise* the labouring classes of Cumberland, and besides, there were so few resident gentry that they saw nothing of a more refined life; there was no opening for servants in indoor places in their own immediate homes, and the greater hardships of out of door life, had greater wages and entire *freedom* to tempt them to follow the way of life of their own mothers.

As for my first special prize scheme, it was principally successful as a stimulus to the masters, and as giving them a direct personal interest in the prosperity

of their own schools. As for the *attendance* of the children, this must always be a thorn in the side of every one interested in the welfare of a school. I must say in my own neighbourhood I exerted all the *personal* influence I could to induce parents to send their children regularly, and as they knew I should inquire into any irregularity the result was pretty good, and as when a few years had passed they found that the boys who got my best prizes were immediately in demand for situations in Carlisle or that I got them good situations in London, the parents became much more willing to insure their regular attendance.

I have ordered a Carlisle journal to be sent to you which will give you an account of the prizes so given on the last distribution day.

For many reasons I have now given up my old prize scheme, and am now interested in one which we hope will reach the poorer, uninspected, and small endowed schools, which are, many of them, in a most deplorable state. We get six schools made into a group, and persuade them to be visited by the ambulatory master, and afterwards have inspection and prizes given besides the Government grant (Miss Coutts' scheme). How this will work I can, as yet, hardly tell you. It has required a deal of coaxing to persuade the old fashioned masters to allow themselves to be in the group, but we have got on an average 13 schools in each rural deanery.

In addition to this we have established competitive examinations for uninspected schools in every rural deanery in the diocese. Of the expense the rural deans give or collect one-third, the Diocesan Education Society give one-third, and I give the other.

Last year we had nine examinations, and considered it a great success, and this year we expect to have every deanery.

I am, &c.
GEORGE MOORE.

J. H. Tremenheere, Esq.

---

12. LETTERS from SUPERINTENDENTS of POLICE to the CHIEF CONSTABLE of CUMBERLAND and WESTMORLAND.

1.

Constabulary Office, Penrith,
SIR, February 25, 1869.

I BEG to acknowledge the receipt of your letter dated the 24th instant, No. 13,331, and in reply thereto respectfully report that Douglas and Crosby have both acted in contravention of the Act 30th and 31st Vict., cap. 130, by employing men, women, and sometimes children in harvesting, hoeing turnips, and gathering potatoes ; they state that they were not aware they were doing wrong, and have not employed anyone for the last four months.

Of the other persons mentioned Brown and Slooms are not known to infringe the Act, and Hewitt states that he has not followed it during the past year through bad health.

I beg also to state that I was not aware of the Act being in force, or I should have proceeded against them. I am, &c.
WM. CARSON, Supt.

J. Dunne, Esq., County Chief Constable, Carlisle.

2.

Constabulary Station, Wigton,
SIR, February 27, 1869.

IN reply to your letter No. 13,327, dated the 24th instant, I have the honour to report for your information that for a number of years down to 1867 Cornelious Laughlin and Arthur Underwood, of Aspatria, have been in the habit of taking turnips to clean or thin from farmers in the neighbourhood where they reside at so much "per acre," and then hiring young persons at so much "per day" to do the cleaning or thinning. Mr. Hodgson, the schoolmaster at Aspatria, has upon several occasions been engaged to measure the land taken previous to the farmer paying for the work done ; he says, "I have seen "them when being engaged upon this duty at work."

I don't know of any other person who acts in contravention of the Act 30th and 31st Vict., cap. 130. I have, &c.
THOS. SPENCER, Supt.

J. Dunne, Esq., County Chief Constable, Carlisle.

3.

Constabulary Office, Whitehaven,
SIR, March 5, 1869.

I BEG most respectfully to acknowledge your communication dated the 24th ultimo, No. 13,330, and to inform you that there are not any persons in this division who act in contravention of the Act 30th and 31st Vict., cap. 130. The farms in general are small, and the farmers employ their own servants, and do their own work. I am, &c.
JOHN LITTLE, Supt.

To J. Dunne, Esq., County Chief Constable, Carlisle.

4.

Constabulary Office, Cockermouth,
SIR, February 26, 1869.

IN reply to your communication, No. 13,329, dated 24th instant, relative to the Act 30th and 31st Vict., cap. 130, I beg most respectfully to inform you that there are no persons in this division who act in contravention of the above-mentioned Act.

I am, &c.
JOHN ROBINSON, Supt.

To J. Dunne, Esq., County Chief Constable, Carlisle.

5.

Constabulary Office, Carlisle.
SIR, March 20, 1869.

IN reply to your letter, No. 13,353, dated the 10th instant, I beg most respectfully to inform you that I find from inquiries that the persons hereinnamed contract with farmers in this division for the purpose of agricultural labour, and employ males, females, and young persons to labour together in one gang, who are mainly composed of their own families.

I have, &c.
A. TAYLOR, Supt.

To J. Dunne, Esq., County Chief Constable, Carlisle.

Thomas Potts, Burgh-by-Sands.
Andrew Todhunter „ „
John Armstrong „ „
William Huggan „ „
Robert Linton, Dyesfield.
William Storey, Thrustonfield.
Joseph Clemison, Wigton.

6.

Constabulary Office, Brampton,
SIR, March 10, 1869.

I BEG leave to report that in accordance with instructions contained in your letter, No. 13,328, dated the 24th ultimo, I have caused inquiries to be made if there were any persons in this Division who acted in contravention of the Act 30th and 31st Vict., cap. 130, and I find that it is not the custom here to employ gangmasters for agricultural work.

Two years ago Mr. Bell, of Nook, Irthington, let some turnip hoeing to Peter Lapping, of Brampton, and he employed several children to do the work, which however they did not complete, and last year two men in Kirklinton took the cutting and sheafing of several fields of corn, and were assisted by their wives and another young woman.

The plan adopted by the farmers in this division when they have a quantity of field work to do, such

Cumberland.

Mr. Henry Tremenheere.

B.
1.

as turnip hoeing or harvesting, is to go to the nearest town or village and employ as many hands as they require, men, women, and children, without the assistance of a gangmaster, the farmer or his head man superintending their labours.

I have, &c.
JOHN T. TOWLES, Supt.

To J. Dunne, Esq., County
Chief Constable, Carlisle.

13. Extract from the REPORT of the CHIEF CONSTABLE of the COUNTIES of CUMBERLAND and WESTMORLAND to the Michaelmas QUARTER SESSIONS, 1868.

THE daily average number of vagrants and tramps was in Cumberland 122; last year 134; decrease 12. In Westmorland 28; last year 35; decrease 7. These figures therefore show that during the year, as compared with last year, there was in Cumberland a decrease of 4,380; in Westmorland a decrease of 2,555, making in the two counties a total decrease of 6,935. It will no doubt be remembered that the Police Committee brought the subject of tramps and vagrants before the last Michaelmas and Epiphany Sessions, and that after the question was discussed it was unanimously recommended that the law in regard to such persons should be strictly carried out. The police have been energetic and vigilant in enforcing the decision come to by the Court, and during the year the number of vagrants and tramps apprehended for offences against the Vagrant Act was in Cumberland 325, of whom 219 were committed to prison, and 106 discharged. In Westmorland 199 were apprehended; 155 were committed to prison, and 44 discharged. Total apprehended 524; committed to prison 374; discharged 150. Increase of 312 apprehended. Increase of 211 committed to prison. With this remarkable decrease of vagrancy there has been a corresponding decrease of offences against the law, and judging from the various reports made to me by the police and the inhabitants generally I am enabled to state that the course adopted by the magistrates has been attended with the most beneficial results in checking professional mendicancy and preventing crime.

Westmorland.

Mr. Henry Tremenheere.

APPENDIX C.—WESTMORLAND EVIDENCE.

CONTENTS.

Nos.
1. Mr. Levi Hodgson, Grasmere, farmer.
2. Rev. Edward Jefferies, rector of Grasmere.
3. Mr. James Fleming, landowner.
4. Mr. William Fuller, schoolmaster.
5. George Borrick, day labourer.
6. James Bousfield, Esq., Langdale.
7. Mr. Thomas Stables, landowner.
8. Mary Raven, wife of day labourer.
9. Mr. William Mouncey, Troutbeck.
10. Frank Jones, Esq.
11. Mr. Crayston Webster, land agent.
12. Mr. Alexander Milne, land steward.
13. Mr. W. Holmes, land steward.
14. Mr. Alexander Webster, farmer.
15. Mr. Isaac Nutter, land steward.
16. Vice-Admiral Russell Eliott, Appleby Castle.
17. Mr. William Williams, schoolmaster, Appleby.
18. Mrs. Elizabeth Graham, widow farmer.
19. Mr. John Hutchinson, farmer.

Nos.
20. Jane Stevenson, farm labourer.
21. Mr. J. Smith, farm bailiff.
22. Rev. J. Whiteside, vicar of Shap.
23. Mr. Thos. Snaith, Schoolmaster, Temple Sowerby.
24. William Graham, schoolboy.
25. Ann Scull, labourer's wife.
26. William Crackanthorpe, Esq., magistrate.
27. Rev. J. Cookson, rector of Kirkby Thore.
28. Mr. Thomas Littlewood, schoolmaster, Kirkby Thore.
29. Mr. W. Robinson, British School, Kirkby Thore.
30. Mr. J. Nicholson, farmer.
31. Mr. Thomas Punchard, land steward.
32. Rev. J. H. Abbott. Perpetual Curate of Middleton.
33. Francis Pearson, Esq., land agent and solicitor.
34. Mr. William Key, land steward.
35. Matthew Thompson, Esq., magistrate.
36. Meeting of the Board of Guardians, Kirkby Stephen.

1. *Mr. Levi Hodgson*, Grasmere, farmer. I drove a cart before I was nine years of age, but boys here are seldom employed before 12 or 13. I never had any education until I was grown up, when I learned to read and write by an itinerant schoolmaster. I am now an employer of labour partly as a farmer and partly as a builder, and possess some little property of my own. If I had been educated when young I might with my opportunities have been now worth thousands. I feel the disadvantages of a deficient education every day of my life. I employ from 20 to 30 labourers, but I confess I prefer those that are uneducated to those who are educated; they are humbler and more quiet and think more about their work. Common labourers here are paid 18*s.* a week, and farm servants hired by the half year from 10*l.* to 16*l.* with their board and lodging. Wages have risen, mowing which used to be done for from 3*s.* to 3*s.* 6*d.* a day cannot now be got done under 5*s.* 6*d.* with beer without limit; some will drink two gallons a day, but two quarts ought to be enough for them.

In 1820 there was only one labourer in this township, and he filled the office of parish clerk, there are now 100. I give my children as good an education as possible because I think it the only way to raise their condition.

Grazing is the only profitable farming here, and all the milk and butter is consumed in the parish. I know of only one woman employed regularly in field out-door labour. All the children in this parish go to school for a part of the year.

2. *Rev. Edward Jefferies*, rector of Grasmere. The national school is fully sufficient for the requirements of the parish, but feels the hardship of the rules imposed by the revised code of only paying for results. School resources are much crippled. It has a small endowment which is now more injurious than otherwise. I believe that there is not a child in this parish but attends either the infant or national school. In the summer the school attendance falls off considerably in consequence of the parents taking their children away for casual employment, Grasmere being at that period a place of much resort, and children of almost all ages are able to earn something in jobs of all kinds, and by being taken into the lodging houses as temporary servants, but the parents cannot resist the temptation of making a little money out of their children's labour, and sacrificing for it the benefit of a continuous education.

Wages are good, averaging 18*s.* per week, but in comparing them with previous rates allowance must be made for the increased cost of living, and a labourer

earning 2*s.* a day 20 years ago was probably as well off as one who now receives 3*s.* The men are vigorous and athletic, and are first-rate labourers.

3. *Mr. James Fleming*, statesman.—I own a small property in Grasmere. Sheep and cows are most profitable. I employ four farm servants, and pay them from 20*l.* to 25*l.* a year with their meat, lodging, and washing. Beer or milk is also given. I consider the labourers thus paid very well off, but many prefer the independence of day labourers, although they are paid nothing on days when heavy rain prevents working, and they are liable to privations when employment is scarce. There is a fair supply of cottages, most of which have two sleeping rooms. Some labourers pay as much as 5*l.* or 6*l.* rent. Most have small gardens attached to their cottages, but they do not grow any vegetables but potatoes. They never cultivate flowers, and care for nothing but what is eatable.

4. *Mr. William Fuller*, Master of National School, Grasmere.—The attendance is very irregular; for four months quite half the school are absent. Many children are kept at home by their parents, doing what the parents ought to do themselves. The boys get a very good education, and I do not confine it to Standard VI., but go far beyond it, and they leave school, if they remain long enough, well advanced in the higher rules of arithmetic, with some knowledge of mensuration. Very few of the boys become agricultural labourers, but a few are apprenticed as shepherds at 14; the others seek higher employment in towns and generally succeed well. I consider that although many of the boys lose a great deal by being withdrawn from school in the summer months, the age at which they leave school in a great degree makes up for it. Parents pay 4*s.* per quarter. The resources of the school are inadequate to its support; but the expenses could not be met unless the Rector contributed to the funds. He paid 10*l.* out of his pocket towards my salary this year.

5. *George Borrick*, day labourer.—I have lived in the township of Grasmere upwards of 20 years. Wages when I first came were 2*s.* a day in fair weather. A labourer who is paid 18*s.* a week gets on an average not more than 13*s.* a week throughout the year. 1*l.* a week is as little as a man can live on with two or three children. I pay 5*l.* a year for my cottage with two bedrooms, a kitchen, and scullery; three bedrooms are requisite for comfort and decency. A good cottage cannot be got for less than 6*l.* or 6*l.* 10*s.* A garden is a great benefit to a labouring man, but it ought not to be less than a quarter of an acre, which is sufficient to grow from 45 to 50 stone of potatoes, which would be a great assistance. Cottages have no ground, or not enough to whip a cat in. I could almost make a living from half an acre, provided it was near a town. A pig six weeks old costs in Kendal Market 25*s.*; in eight months it would be worth 7*l.*, and would supply meat during the winter. I could not keep a pig without a garden. I have stood many a time in the street at Kendal Martinmas hiring fair with a straw in my mouth to show that I was to be hired.

6. *James Bousfield, Esq.*, manager of the Ellerwater Gunpowder Works.—I consider the wages of a labouring man in this district are very good. Ordinary farm labourers receive 20*l.* a year, with board, lodging, and washing, and head men from 28*l.* to 30*l.* Their meals consist of milk porridge for breakfast, bread, cheese, and beer (called a bait) at 10 o'clock, meat and vegetables and puddings for dinner, and porridge again for supper. The hiring is for six months when the men live in the farmer's house. Labourers by the day receive 3*s.*, but the work is not continuous. There is little or no tillage in Langdale; sheep farming and employment in the powder works being the chief occupations. Cottages are on the whole good, many new ones having been built, and the accommodation generally consists of a room and scullery on the ground floor with two bedrooms above. Very few of the cottages have gardens. The people do not care to cultivate anything but potatoes, for which some of them have small allotments. The statesmen, of whom there are 10 or 12, owning from 15 to 50 acres, with a right of pasturage on the fells, are a respectable class of men, and most of them are fairly educated, but the education they received in their youth is inferior to that now given to the children of the humblest labourer. They assist each other on their farms, or in sheep shearing, in which no hired labour is employed, but they go with their servants to each other's homesteads to help to shear the flock until the work is done.

7. *Mr Thomas Stables*, Langdale.—I am a statesman, I own about 50 acres, which I farm myself. I consider labourers very well off, being comfortably lodged and fed with the best of everything, and with plenty of money in their pockets, more perhaps than is good for them. A farm servant living in the house has money wages to the amount of 20*l.* a year, out of which he ought to be able to put by 15*l.*, but that is not often the practice, the men too often spending their money in drink. There is too much of that in this country. The young people are now educated far better than when I was a boy.

8. *Mary Raven*, wife of day labourer.—My boy 11 years of age is a "half timer" at the gunpowder works, and earns 10*s.* a month. I think it good for the lad and for us that he should earn something, however little. We always have fresh meat or bacon for dinner, and milk porridge for breakfast and supper, besides tea and bread and butter, or cakes and tea between dinner and supper; one quart of blue (skimmed) milk, which costs 1*d.*, does for porridge.

9. *Mr. William Mouncey*, Troutbeck, overseer of the poor.—This parish consists almost entirely of statesmen, owning from 20 to 200 acres, including fell pasturage. These properties have been in the families for generations. Their education is not great, but nearly all can write, read, and keep accounts. One can neither read nor write, and can only tell a country from a Bank of England note by the device on it. All the children in the parish get some education, but far less than they ought considering the means of their parents. It is too much the custom to employ the children at an early age in the small farms instead of sending them to school, although they certainly acquire habits of labour which fit them for the work of after life. This is almost entirely a sheep and grazing district; the fells are enclosed, and each proprietor pastures his own sheep on his own allotment. Cattle and milch cows are pastured in great numbers. This is a great "meat country," no labourer but gets one meal a day of animal food besides porridge night and morning. There is no poverty.

10. *F. Jones, Esq.*, agent to General Le Fleming of Rydal Hall.—I consider the labouring men better off in this district than in any other part of England. Wages average 18*s.* per week, or 15*s.* throughout the year, the farmer providing work in wet weather where there is in the larger farms always something to be done under cover. The hiring of farm servants by the half year and at the fairs is prejudicial in many ways to the employer of labour. I attribute the custom to the want of sufficient cottage accommodation. The farmer pays higher for labour by boarding and lodging his men and paying them money wages besides, than if they came to work as daily labourers. It is also a cause of overcrowding in the farmhouses and of immorality. From the nature of the farming there is little demand for female labour, women as a rule not milking the cows, which is chiefly done by men. Some boys are employed in driving cows and carrying milk, but they get a fair amount of education. The children of the small statesman are in too many instances withdrawn from school for months together to assist in farm work, which is chiefly done by the family, the restricted means of many of these small freeholders not enabling them to hire labour. Many of them lead a hard life and have difficulty in keeping their heads

Westmorland.

Mr. Henry Tremenheere.

C. 1.

above water. The tendency is to their gradual extinction. Such cottages as have been built of late years are decided improvements upon the old ones, but they are not sufficient for the wants of the country. This prevents immigration from other districts which the high rate of wages might otherwise encourage. Nothing can be better than the labourers' diet in Westmorland.

11. *Mr. Crayston Webster*, land agent, Kendal.—I have been engaged for many years in my profession, and I know the social and economical condition of Westmorland well. Women are very little employed in field labour, and in many parts of the country not at all, owing to the great preponderance of pastoral over agricultural land. Public gangs are entirely unknown. The condition of the farm servants is one of great comfort. They are well fed and receive high wages. The labour of one Westmorland labourer I consider equal to that of a man and a half of the southern counties. The practice of boarding and lodging the farm servants certainly has its disadvantages in a moral point of view ; the women having frequently to pass through the men's room in going to bed, or vice versâ. No doubt the practice arose from the scarcity of cottage accommodation, but it is continued from habit although it can scarcely be said to be the best arrangement for the farmer. Farm labourers are a very independent class, and think little of breaking their engagements. The statesmen are gradually declining in numbers ; most of their estates are encumbered, being burthened with portions for younger children besides debts. They are not what can be strictly called an educated class, but are very shrewd. When the property is small there is a great inducement to employ all the members of the family in farm work, the education of the children suffers in consequence. The high rate of illegitimacy which distinguishes both Westmorland and Cumberland is in a great degree owing to the want of a sufficient check by public opinion. The low moral tone among the labouring classes is traditionary, and perhaps sufficient time has not yet elapsed to allow the influence of increased intercourse to tell upon the prevailing vice. Girls think it no disgrace to be the mother of one illegitimate child, nor do their friends regard it as such, but it must be allowed that marriage not unfrequently follows.

12. *Mr. Alexander Milne*, agent and land steward to the Hon. Mrs. Howard of Levens Hall. I have been for 15 years manager of Mrs. Howard's estates. Some of the farms are almost wholly arable. I employ about eight women, principally the wives of labourers, in singling turnips, weeding, &c. When the women have infants they find it answer to pay a young girl to take care of them during their absence at work. A woman can earn 1*s.* 8*d.* a day in hoeing and weeding by piece. Their occupation in the field for a part of the year is conducive to health, and does not as far as my experience is concerned produce any evil consequences morally or physically. Women work under a man superintendent. Day labourers earn good wages in this district, viz., 15*s.* a day with a cottage rent free and coals led. Of the two systems of hiring labour I consider that of hiring by the half year and boarding and lodging the labourer is the most disadvantageous to the employer ; he pays more for his labour and loses the privacy of his home. Many of the farm houses are overcrowded, and herding the sexes together too often results in immorality. The only remedy is increased cottage accommodation, to which the chief proprietors are now becoming alive. A labourer should not reside more than half a mile from his work. How can a man who has a greater distance to walk attend properly to the horses and cattle at evening ? Our labourers are well worth their wages ; they are very intelligent, but some are too fond of the public house and the beer shop. They are generally fairly educated, there are now not many who are unable to read and write. Children are withdrawn from school for months together to add to the earnings of a family, and considering the high wages of a labouring man and the occasional earnings of his wife I do not believe that there is any real necessity for such an interference with the education of the children ; nothing will prevent this but state interference. This district is very well provided with schools, and at Levens there is a night school which is successful in keeping young men from the public house ; those who attend it make the steadiest workmen. The statesmen are not a prosperous class, and cultivate their small properties chiefly by the labour of their families ; they are obstinately wedded to the customs of their ancestors, and are averse, from want of capital, to all modern improvements.

13. *Mr. W. Holmes*, land steward to G. Wilson, Esq., Dalham Tower, Milnthorpe. I employ no women except in the hay season and harvest ; it is not the custom of this district. Boys are used for bird tenting, and are in the fields after the corn is sown from seven in the morning until dark. When the corn is ripening similar precautions are used. Boys earn about 6*d.* a day. The labour question is the great one for this county, and I believe that but for the extensive use of machinery the cultivation of the land would be impossible. The men are becoming our masters. The want of cottages has led to the necessity of boarding and lodging them in the farmhouses, and on the smallest offence being given they will throw down their tools and seek another master. Until more cottages are built farmers must be under great disadvantages with respect to labour. This makes it virtually a landlords' question, for if a tenant could get his labour cheaper he could afford to pay a higher rent. The possession of a cottage would have the effect of attaching a labourer to the locality, and checking that propensity to change which the system of farm servants has encouraged. This system is not only economically false but morally injurious. The crowding in the farmhouses of a number of youths and girls without control is to be condemned. I know an instance, and that on the glebe of a clergyman, in which the sleeping rooms of the men and women are only separated by a sheet. There are a few statesmen in this neighbourhood, but they are gradually diminishing in number. As a class they have little general knowledge, and are possessed of so little capital that artificial manures are generally out of their reach. Their children are more employed in farm work than is compatible with their education.

The diet of agricultural labourers in this district is excellent ; if it were not so they could not do the work. In this cold and wet climate they would starve upon the meagre subsistence of a southern peasant. The system of farm servants, besides its other disadvantages, tends to foster habits of extravagance on the part of the labourers. Dissipation of some kind or other is certain to be the result of high wages when a number of men are congregated together. The earnings of the half year are generally expended in self indulgence. Saving is the exception.

14. *Mr. Alexander Webster*, farmer, Beetham. There is no mode of carrying on farming business in this district except by farm servants. I have 30. Daily labourers are bad to get owing to the scarcity of cottages. Farm servants cost more than day labourers, and make a difference in the cost of labour not far short of 25 per cent. I do not see any prospect of the system being improved. I lodge and feed all my labourers in my house, and I have had as many as 12 sleeping in one room, but it was airy and well ventilated. Farm servants have a good deal of money to spare after paying for their clothes. The savings bank would be a grand thing for them if they would take advantage of it, but the men tempt each other to spend money. Generally they are an improvident class, and after having enjoyed high wages for years, often end by going into the union workhouse, and we farmers are burthened by their maintenance. I do not complain of their not being under control, but they are rather independent. The parish is well off for education, but many of the boys are taken from school in the summer for three or four months, and there is plenty of employment for them. In all my experience

I do not know of more than three farm servants who have saved money, although they might easily put by 15*l.* or 20*l.* a year out of their wages. The best men get 30*l.* a year with food, lodging, and washing. I employ no women except as domestic servants.

15. *Mr. Isaac Nutter*, land steward, Burton.—There are no women employed in agriculture on the property which I manage or in this parish, of which four-fifths are in pasture. Wages are 15*s.* a week all the year round for day labourers and 30*l.* a year to head farm servants. The instances of saving money are very rare among this class as it consists chiefly of young men. Intemperance and illegitimacy are our great evils. There is not a child in this parish that is not under instruction for nearly the whole year round.

16. *Vice-Admiral Russell Eliott*, Appleby Castle, manager of the estates of Sir Richard Tufton, Bart.—I rent and farm an estate of 1,220 acres, chiefly in the neighbourhood of Appleby. Boys and women are employed regularly on my farm; of the former some are as young as 11 years. Those employed elsewhere and by the half-year take service and live with the farmers on their farms. On the Langton Field Farm the young persons I employ are chiefly the families of the hinds. A considerable number of women are also employed, and with the children they do almost all the light work. They thin and hoe turnips, weed and clean the land, plant potatoes, and spread dung, but they do not load dungcarts, a species of labour which I consider improper as a rule for females. They drive or lead carts. They also attend to the thrashing machine. There is a great deal of field labour which women do even better than men, such as hoeing turnips, in which they are very expert, and I know of no instance in which such employment, as conducted on my own farm, has been followed by evil consequences to morality. The women employed are chiefly wives and families of agricultural labourers, although there are some single women. Nothing resembling the gang system of the eastern counties exists in this *immediate* neighbourhood. The women, young persons, and children work together, but they require little or no superintendence, and they are paid directly by my manager, and not through the agency of a middle man. Women earn 1*s.* a day, and boys from 6*d.* to 9*d.*

The work which children do in the fields is not, in my opinion, injurious to their health, but the contrary. The effect of the too early withdrawal of children from school, however, cannot but act injuriously upon their education. It would be a good arrangement, in my opinion, if no young persons under 15 years of age were permitted to work unless they could read, write, and cypher to some extent. This would be introducing, if I may so speak, the competition principle into the juvenile labour market, and might act as a stimulus to parents to push forward the education of their children. Any such offering themselves from poverty should be obliged to take half-work divided into three days at school and three at work in the week, and on one of these (Saturday, the usual school half-holiday) always to be at work. The farmer having a double set, however, might find workers for every day.

There are good schools in this neighbourhood, and at reasonable rates, but they are not well attended, and it is not from the poverty but from the apathy of parents that this arises.

The great want in this district is a sufficiency of cottage accommodation for agricultural labourers. Few are attached to the farms, as in Scotland, where every estate has its complement of well-placed ordinary cottages for the labourers employed on it. Such cottages as are occupied by agricultural labourers in this district are chiefly in towns, and the necessary attention to the separation of the sexes is only beginning to be thought of, and is not yet popular or prevalent. The worst results to morality arise in Westmorland from the crowding together of young men and young women in what I may call farmhouse barracks. There is also a great want of control over the servants on the part of the masters. The worst results to morality also arise from the pernicious hiring fairs.

The diet of agricultural labourers in this part of the county is ample and good. In the farmhouses they live exceedingly well on milk porridge, with meat always once and sometimes twice a day. The result is that the farm servant is in the highest physical condition, and, as a rule, can do more work than a day labourer providing his own meals. They might with their wages, varying from 15*l.* to 25*l.* a year, save money. My labourers reside in cottages rent-free, and provide for themselves. Some are saving money, but as a rule neither the savings banks nor the provident societies are taken advantage of to the extent they ought to be.

The wages of my labourers living in cottages with gardens rent free, and a cow kept for them are 12*s.* a week throughout the year, they have also about two sack loads of potatoes grown for them, seed, coals led from the railway, and some additional allowance in the hay and corn harvests. Their mode of living is perhaps somewhat inferior to that of farm servants, as they do not consume so much meat. Eggs are a good deal used, and a kind of scone with jam or preserves is a common article of food. Nothing, however, conduces more to the well-being of a cottage labourer than the possession of a cow. I keep one for each of my married labourers on my farm, and deduct 2*s.* a week from their wages, but the labourer gets, with butter at 1*s.* 6*d.* a pound, a clear profit of at least 4*l.* 16*s.* a year, estimating the produce of a cow as worth 10*l.* yearly. The labourer moreover has always a supply of milk for his children, a consideration of great importance in rearing a healthy offspring.

17. *Mr. William Williams*, master of the British school, Appleby.—Boys remain at school up to 12 and 13. About one-fifth are withdrawn from school for five or six months in the year and are employed by the farmers. They earn 1*s.* a day at harvest and 9*d.* at other times. The education of a boy who only spends six months of the year at school is practically at an end. Nothing but the necessity of obtaining a certificate of a certain amount of elementary instruction before he commences labour will be an effectual protection against this. I have been a master of several schools in the midland and other counties, but never found so much natural ability as in the scholars I now have. I wish the parents appreciated the advantages of education as highly as their children. The imperfectly educated parents seem to value it least; the wholly uneducated and the best educated have a higher sense of its value. I conduct a night school; the attendance averages about 35, and consists of lads of from 16 to 19 who desire to keep up their education. It is attended also by several adults. The boys prepare themselves for situations as clerks or shopmen. Mensuration and the elements of algebra are taught.

18. *Mrs. Elizabeth Graham*, widow.—I farm the estate called the Hospital Farm near Penrith, part of the endowment of 13 almshouses at Appleby. I employ five farm servants, three men and two women. I pay my head man 30 guineas a year; the others have 21*l.* and 16*l.*, with their board. I employ for turnip singling and at harvest young boys ranging from 9 to 13 years of age. The female farm servants get 12*l.* and 5*l.* 10*s.* a year, with board. They work in the fields and make themselves generally useful, and prefer the out-door to the indoor work. They also attend to the thrashing machine.

19. *Mr. John Hutchinson.*—I rent and farm an estate consisting of 700 acres at Brougham Castle. I cultivate it partly by farm servants and partly by day labourers, and get the occasional assistance of a gang of women and children from Penarth. I have six men farm servants living in my house, and two girls for cooking and attendance. My head man has 28*l.* a year and the others from 20*l.* to 15*l.*, with their board. They live as well as I do. Breakfast,—milk porridge with bread and cheese or butter; dinner, always meat and puddings; supper, porridge with bread and cheese

Westmoriand.

Mr. Henry Tremenheere.

C. 1.

and often meat. There are three cottages on my farm; two of them have only two rooms, although the men occupying them are married and have children. These labourers are paid 14*s.* a week all the year round, "wet or dry." They have their cottages rent-free, and in addition 1½ quarts of milk per day and potatoes without paying for them. I consider the wages with the allowances equivalent to 18*s.* a week the year round. These men are saving money. Three out of the six of my farm servants can neither read nor write. I prefer educated to uneducated men, they are more domestic in their habits, and amuse themselves in the evenings with the newspaper or a book instead of seeking excitement in the town or at the public houses. From the general scarcity of labour in this district I am obliged to employ parties of women and children in singling turnips and in harvesting. I obtain them from Penrith, paying a man 5*s.* a day for hiring and superintending them. Good order is kept. I send for the party in carts, but they return home on foot. The hours of labour are from 7 a.m. to 6 p.m., with an hour for dinner. The boys are quite uneducated, often half-grown men, and very badly brought up.

20. *Jane Stevenson*, aged 50 (pulling turnips in a field one mile from Penrith).—I have worked on this farm for 30 years and have no other occupation. I earn 1*s.* 3*d.* a day in winter and 1*s.* 6*d.* during the rest of the year. I get no wages when the weather will not allow me to work. I support a sick husband. I like out-door work, and I find myself quite unwell if I stay at home for a day. My hands are often blistered from pulling turnips. I do other work as well. Scaling muck (spreading manure) is much harder work on grass than on ploughed land, the dung requires to be broken so small. I cannot read or write.

21. *Mr. James Smith*, farm bailff of the Lowther Castle Farm.—I manage a farm of from 800 to 1,000 acres, chiefly pasture land. I employ a good deal of female labour in harvesting, but not at other seasons. I consider a Westmorland labourer especially valuable, because he is a willing servant. He is well paid and well fed, and in general intelligence is greatly superior to the average of agricultural labourers in other parts of England. Education is not so general, however, as it ought to be, but there is a marked improvement in the generation now growing up. Irregularity of attendance at school is unavoidable in consequence of the demand for the children's labour at certain seasons, but I think that within certain limits work is an important part of a child's education.

Girls are only occasionally employed in this neighbourhood in out-door work in hay time and harvest time, but girls from the age of 10 to 13 are not useful except in the lightest work. I would not place any restriction on the ages at which boys should be permitted to work on the land. I think it is better that they should learn to work as early as possible, provided they are not prevented from attending school, nor do I think it desirable to place any restriction on the employment of young females in agriculture, a general knowledge of outdoor as well as indoor work is necessary to make them useful farm servants.

22. *Rev. S. Whiteside*, Vicar of Shap. The education of the children of the labouring classes may be carried too far if it makes them discontented with their position, and induces them to look for employment in towns or on railways to the diminution of the rural population. Every advantage is taken of the opportunities for education presented in this parish. As a rule boys are not employed in agriculture before their 13th or 14th year, they then make half-yearly engagements, boarding and lodging with their employers. Occasionally younger boys are put to work during the hay harvest, which for the most part generally coincides with the month's school holiday. There is a peculiarity in our schools in this parish or at least in one of them. In the mixed school 25 pupils are admitted free who are for the most part the children of labourers. This boon seems to be much appreciated. We have more applications from this class than can be granted.

23. *Mr. Thomas Snaith*, certificated master of the National School, Temple Sowerby, I have 53 boys and girls on the books, but the attendance in the summer and autumn months is between 25 and 30. I lose all my boys above nine years of age from the beginning of April until the end of September; they are hired by farmers for potato planting, preparing the ground for turnip seed, singling turnips, and in the hay and corn harvests. Boys withdrawn from school for six months of continuous field work make no further progress in their education, they might as well leave school altogether. The earnings of the children are necessary for some of the parents, but for many of them they are not. A certificate of a certain amount of proficiency in elementary education before a boy should be hired to labour, would be an effectual check on parental neglect, as they would have a pecuniary interest in pushing forward their children's education.

24. *William Graham.* I am just turned 13. I have gone out to work ever since I was nine years of age. I leave school in April and return at the end of September. I earn 1*s.* a day. At the end of last harvest I and my younger brother had made between us 5*l.*, which we gave to father (a coachman in a lady's service). The work in the fields is hard, but I am never the worse for it. I and five other boys generally work together on one farm. Gaffer (the superintendent) often swears at us and knocks us about. I breakfast at 6, then go to work and take my dinner with me, I have an hour to eat it in and rest, then to work again till 6. The farm is less than a mile from home. I have a good supper, and on summer evenings I sometimes play cricket on the green if not too tired. I find that on going back to school in the winter I have lost my writing but not much else; but perhaps master thinks differently.

25. *Ann Scull*, aged 32, wife of Robert Scull, farm servant. My husband gets 26*l.* a year with his meals, and returns home to sleep. He pays 4*l.* a year for a very small cottage with only two rooms, viz., a kitchen and bed room. I have four children, the eldest a girl eight years old who goes to school. I am Scotch, but left school far too soon, but I improved myself afterwards. I can write well and read to improve and amuse myself. The Scotch would deprive themselves of the necessaries of life to give their children education.

26. *William Crackanthorpe, Esq.*, Newbiggin Hall, Temple Sowerby, Magistrate and Chairman of the Kirkby Thore Board of Guardians. The want of cottages is the cause of prevailing immorality in Westmorland. I have three on my estate, each containing three bed rooms which I let for 2*l.* a year each. Each has a small garden attached. I think cottages should not be regarded in the light of an investment, but as indispensable appendages to property. I pay my labourers 15*s.* a week all the year round "wet and "dry," and I have no doubt that what I get for these wages is worth that of two southern labourers. My men are as willing as they are able. The custom of boarding and lodging labourers in the farmhouses is a necessary consequence of the want of cottages. The farmers do not exercise that moral superintendence over their servants that they ought. The master and his family formerly took their meals with the farm servants and were a check upon them; now they and their family dine in the "parlour." Farmers are now so dependent upon their men that they are absolutely afraid of them, and the consequence is that they have more liberty than is right.

The schools in this neighbourhood are well attended, but in summer and autumn there is a great falling off. How a sufficient amount of school attendance is to be obtained is a problem which has often perplexed my mind. A system of compulsory education will not do, and a plan requiring a certificate of a certain amount of school instruction before a child is permitted to work would I fear bear hard upon those parts of England

where wages are so low that the parents are unable to spare even a few pence weekly for the school fees. In such cases the only course would be to pay for the schooling of the children of the poorer classes out of the rates, but how would the farmers stand that?

27. *Rev. J. Cookson*, Rector of Kirkby Thore. I have no reason to complain of the want of attendance at the school of this parish in the winter months, but in the summer and autumn progress is seriously interfered with. Parents will not deprive themselves of the little earnings of their children, no matter what their circumstances are; one of the characteristics of the Westmoreland people is their love of money, and for money many parents do not hesitate to sacrifice the prospects of their children. The National school is almost deserted for four months in the year, only the youngest children remaining. Most of the labourers in this parish are members of Benefit Societies, but they spend a great deal more money than they ought. This remark applies particularly to farm servants. The system of lodging labourers in farmhouses is one great cause of the bastardy which disgraces this county. I preach and lecture against the prevailing vice, but to no effect. The moral sense on this subject is dead, and no girl feels that by having an illegitimate child she has disgraced herself. A man hired into a farmhouse if he marries loses his situation, and this acts as encouragement to bastardy, as he would rather pay 1*s.* 8*d.* a week to maintain an illegimate child than lose a situation worth perhaps 30*l.* a year by marrying. The arrangements in the farmhouses are in many instances most improper, the men's and the girls' rooms opening into each other.

28. *Mr. Thomas Littlewood*, Master of the Kirkby Thore National School. From June to the end of September the attendance of my school is reduced to half. Boys are hired for field labour at nine.

29. *Mr. William Robinson*, Master of the British School, Kirkby Thore. About the end of May all the elder boys are withdrawn from school, and are absent the greater part of them for three months, but some longer. One boy of 13 has just returned to school after absence of six months. Few remain at school longer than 12 years of age, the greater number leave at 11.

30. *Mr. J. Nicholson*, of Kirkby Thore. I farm two estates of 300 acres each, chiefly arable land. I employ 20 farm servants who live in my house. I will not hire any man who refuses to pledge himself to attend church. I employ boys and women to some extent as well as day labourers who live in cottages. These have 2*s.* 6*d.* a day. I consider good living good economy in the end. My farm servants are young and able bodied, and it is striking to notice the manner in which their superior diet tells upon their work. A day labourer will break down, or have recourse to the stimulus of beer, at a task which a farm labourer would execute with ease. The mode of hiring at fairs is a nuisance which I hope to see abated by a system of registration, but it will take time.

The prizes for flowers and fruits at the shows for cottagers' gardens, now periodically held at Appleby, Temple Sowerby, Kirkby Stephen, and Penrith, have created a taste for garden cultivation among the labourers.

31. *Mr. Thomas Punchard*, land steward to Lord Kenlis, Underley Hall.—Lord Kenlis is the proprietor of 17,000 acres in this neighbourhood, divided into 150 farms. There are few women or children employed in this district, the county being nearly all pastoral, a very small proportion only of the land is arable. Very few boys under 13 years of age are employed here in agriculture, above that age they are generally taken into the farmhouses, and provided with their board and lodging, working the usual number of hours per day. The farmers generally keep their own sons at work on their farms until they are grown up to man's estate. No girls are regularly employed in agriculture, but a bad system prevails of occasionally sending young women who have been hired into the farmhouses for domestic purposes to assist the labourers in their out-door employment, such as loading and unloading dung carts, stacking hay, corn, &c., and as I have even known them sent with a horse and cart to the market towns for manure.

No boy under 15 should in my opinion be allowed to work on the land for more than three days a week; the remainder of the time he should be at school. Some arrangement should be made to enable lads of from 13 to 18 years of age to go to school in the evenings. The means of education are generally speaking ample for the labouring population of this neighbourhood, and the labourers themselves are on the whole fairly educated. Out of 60 labourers employed on the estates which I manage, only six cannot read and write.

Owing to the system of hiring farm servants into the farmhouses there are very few cottages in Westmorland, and of these some are empty, though that probably is owing to their bad state of repair. Taken as a whole those in the rural districts are in decent order. The majority of the cottages are in small towns and villages, and the condition of many of them reflects no credit on their owners, who generally are well able to pay the cost of maintaining them. The supply is not equal to the demand, and the time must come when landholders will find it incumbent upon them to erect new ones. In many districts they are few and far between, while the outcry of the farmers is that labourers are getting scarce and cannot be had when they are most wanted. Overcrowding is one consequence of this scarcity of cottages, though it can hardly be avoided in the present state of things. Cottages here, like the farmhouses, are very badly ventilated, in numerous cases the only part of the window that opens is one small pane, seldom measuring six inches square. Nor is any greater attention paid to water supply, though in towns the compulsory measures of recent legislation promise to have a good effect in this respect.

The cause of the immorality of Westmorland is difficult to trace, and can hardly be laid to any one cause, but rather to a combination of causes of long standing. I do not think the bad cottage accommodation has so much to do with it as is supposed. I rather attribute it to the system of hiring young men and young women into the farmhouses without a sufficient restriction as to their intercourse with each other. The proportion of farm servants to day labourers is that of 3 to 2.

32. *Rev. J. H. Abbott*, Perpetual Curate of Middleton.—Field labour does not interfere with the education of children in my township. I ascribe the high rate of bastardy which prevails in Westmorland to the intermixture of the sexes in the farmhouses, few farmers exercising any vigilance over their servants' conduct. They are so dependent on their labourers that they fear to offend them, and many things are connived at which would not be tolerated elsewhere. Night courtships, for example, are what no man who cared for the morals of his people would permit. The servant girls hired for farmhouses are the chief contributors to the number of illegitimate children, as is shown by the parish registers. Some little amendment in the state of things has taken place within the last few years owing to the influence of the clergy.

33. *Francis Pearson, Esq.*, solicitor and land agent.—The farmhouses generally in Westmorland are old, many of them even built at least two centuries ago, and their arrangement is not suited to our notions of propriety. There is often no separation between the sleeping apartments of the men and women; a door which does not lock often divides them, and the results are notorious. Farm servants in this county have greater advantages than any other description of rural population that I am acquainted with. The farmers are satisfied with the arrangement, and will continue it until the men become so independent and overbearing that it will be impossible to endure it any longer. In the mean time increased cottage accommodation, although desirable, would not materially alter the relations between the farmer and his

Westmorland.
Mr. Henry Tremenheere.
C.
1.

labourer. The farmer finds his advantage in having his men always at hand, which could not be the case with day labourers living in cottages. Farm servants are not now a saving class whatever they may have been formerly.

The competition for farms of from 80 to 150 acres is much greater than for larger ones. There are 10 applications for a farm of moderate size to four for a larger one, and they bring higher rents. The tendency is to form very large farms, but it is economically a mistake. The farming is invariably of a higher character when a tenant is able to overlook personally the whole of his farm and is not above contributing his personal labour. Farms of course may be too small; and a sufficiency of capital is indispensable. The education of the daughters of small farmers is often a mistake. They are kept up to the age of 14 or 15 at the parish school, and then sent for a year or two to a "finish-" ing school" of some neighbouring town, where they only learn to play a little on the piano and to do crochet work. They are not sufficiently educated to be ladies, they are consequently discontented and unhappy, and if they marry it is probably to some young farmer whom they look down upon.

34. *Mr. William Key*, land steward, Casterton.—This is an exceptional district. Education is perhaps nowhere so well provided for; boys never leave school before 12 years of age, and often not until 14. Wages are higher than anywhere that I know, 18*s.* in summer and 16*s.* in winter. In hay harvest I am obliged to give 5*l.* 5*s.* a month to men with their meals. The farms in this district rarely exceed 100 acres, and the average rent is 2*l.* per acre. In no part of England is labour so well paid. Farm servants have five meals a day, besides good wages. The cottage accommodation in my particular locality leaves nothing to be desired; but it is not so generally. We do not however want cottages as a rule with more than two or three rooms. Children get their education over so early that the parents are generally able to put them out to service by 12 years of age, or sooner. I wish the morals in farmhouses could be improved. The great difficulty is the independence of the servants, who will not bear to be interfered with.

35. *Matthew Thompson, Esq.*, Magistrate, Kirkby Stephen.—I employ no female labour on my estates, I disapprove of it, and I avoid as much as possible employing young boys. Two of my farm servants who have been with me for many years have each saved nearly 400*l.* I invest their money for them and keep their books. As a rule allotments are not appreciated or required in this district by the agricultural classes. Their wages are too good to need them.

36. At a meeting of the *Board of Guardians of the Kirkby Stephen Union*, January 4, 1869, in reply to several questions put on the subject of the inquiry, the following answers were returned:—

1. It is neither customary nor desirable in this district to employ boys in agriculture before the age of 13.

2. Women are scarcely, if at all, employed in agriculture. Farmers would be glad to avail themselves of such labour if it could be obtained, but only in very rare cases will the wives of labourers consent to take out-door work.

3. Although the farmhouses are in many instances deficient in proper accommodation, the cases in which there is a free communication between the bedrooms of the male and female farm servants are now quite exceptional, at least in this district.

Westmorland.
Mr. Henry Tremenheere.
D.

APPENDIX D.—WESTMORLAND.

LETTERS, COMMUNICATIONS, TABLES, AND RETURNS.

Contents.

1. Letter from Rev. James Simpson, Vicar of Kirkby Stephen, on the condition of agricultural labourers.
2. Letter from Mr. George Browne, of Troutbeck, on the condition of Westmorland "statesmen."
3. Letter from Mr. Thomas Nicholson, schoolmaster of Dufton, on education.
4. Letter from Mr. Crayston Webster, of Kendal, land agent.
5. Letter from Lt.-Col. Rigg, on the wages of agricultural labourers.
6. Farm bailiff's schedule of wages paid at the Langton Field Farm near Appleby.
7. Table of school attendance in 29 parishes of Westmorland and Cumberland.
8. Returns relating to the condition of cottages in 92 parishes and townships of Westmorland and Cumberland.

1. Letter from Rev. James Simpson, vicar of Kirkby Stephen.

Vicarage, Kirkby Stephen,
March 9th 1869.

My dear Sir,

I have not forgotten your request and my promise that I should give you some particulars in writing of the condition of agricultural labourers in Westmorland and more especially in this part of the county.

You have doubtless learnt from your own inquiries and observation that the employment of women or children in field labour is the exception, not the rule. There may be two or three farms in the neighbourhood of Penrith upon which some of the work is done by contract, and done by persons of various ages and different sexes coming out of Penrith for the day; and there are two or three large holdings about Appleby, Long Marton, and Kirkby Thore upon which much of the work is done by day tale men receiving about 2*s.* 6*d.* per day, and whose wives are employed at certain seasons in hoeing and pulling turnips, gathering weeds, or at harvest work; but upon the great majority of farms the work is done by men and boys hired for the half year, who are boarded and lodged in the farm house, and for the time being form part of the farmer's household.

These half yearly servants are generally unmarried, but not always, and in such exceptional cases, should the wife live anywhere near at hand, the man sleeps at his own house, but if at some distance, he goes home once a week, or more seldom, according to distance.

In a farm house where several men are kept there is necessarily a great deal of work in the house, and unless there be grown up daughters of the family, girls have to be hired.

It sometimes happens that a servant girl is sent out to work in the fields at a busy season, but this is becoming less and less the custom, indeed, as you heard a guardian of this Union say, "if he wanted a girl to "work out he should have to go to Carlisle to hire "her."

Upon some farms the servant girls have to milk the cows and "serve" the calves, as well as attend to the dairy generally, but special mention would be made of "milking" at the hiring, and there are very few girls in this part of the county who would engage themselves to a place where they would have to work in the fields.

The situation of a servant girl at a large farmhouse is no sinecure. She has to rise early to prepare breakfast for the men before they go out to work, and she is often the last of the household to bed, because she

has to "wash up" and "side away" the supper things; and her only holidays are a few days at each of the terms. Many of the girls who begin service in a farmhouse, if clean and active, become domestic servants, and tempted by the offer of higher wages very often find situations in the neighbouring counties; and I am fully justified in saying that they are highly valued for their truthfulness and their honesty. The majority of them are steady, and do well, eventually marrying some tradesman or artizan, some return to their homes damaged in reputation, and while the county gets full blame for the misconduct of the few, it gets no credit for the good conduct of the many, in those tables of statistics from which those who know not the county are wont to judge of the morality of its people.

The wages of men hired into the farmhouse are about 12*l.* for the summer and 10*l.* for the winter half-year; those of boys according to their age, strength, and qualifications. I have known instances of men receiving 15*l.* for the half-year, but they are exceptional cases, in which either the man is well known as skilful and trustworthy or the place is notorious for a "cross master" or as a bad meat place.

I have given the wages for half a year because it is well nigh the universal custom to hire for the half-year and not for the year. As you are well aware, when "the statutes" or hirings were first established it was the custom to hire for a year, and Martinmas was the term. After the passing of the statute, 8 and 9 Wm. 3. c. 30., by which a yearly hiring was made one of the conditions of gaining a settlement, the occupiers would naturally begin to hire for half a year in order to save their parish, and Whitsuntide seems to have been chosen as the other term, not because it was a convenient season for changing servants, but because it fell about six months after Martinmas. I dare say farmers would be glad to have some other term than Whitsuntide, but they cannot find one more convenient than Martinmas, and now that there is no question of settlement involved it seems to me that they would do well to return to the old custom of yearly hirings, and let the term be Martinmas.

The mode of hiring does not greatly differ from that in fashion two hundred years since. On the hiring day the masters and servants meet at some neighbouring town, the men and boys holding a straw between their lips, or having a sprig or leaf in their hatband as a sign that they are to hire, and the women standing together in some accustomed place, described and spoken of as "the cross," having reference to the old custom of standing at the market cross or in the churchyard. The master in want of a servant having singled out one likely to suit his purpose inquires his name, birthplace, where he has lived, what he can do, why he left his place, &c., and what wages he wants. If satisfied with his answers he asks him to step aside or go with him to a public-house and have a glass, and they try to bargain. Should they agree about wages and nothing be said about the amount of "arles," the master gives the man a shilling, and they fix the day when he shall enter upon his service, which is generally on the Thursday or Saturday following the hiring, rarely, if ever, on the Friday. It was commonly thought that the "arles" served to bind the bargain, and if a servant should afterwards refuse to enter upon the service, he almost invariably returns the shilling by way of intimation that he has changed his mind. It is hardly necessary to say that this notion of the shilling arles binding the bargain was a mistake. Under the statute 4 Geo. 4. c. 34, no proceedings could be taken against a servant who refused or neglected to enter upon the service for which he had engaged himself, unless the contract was in writing and signed by both parties, which was very seldom the case. Under the recent statute this has been altered.

The notion itself, as well as the custom of giving arles, may both owe their origin to the practice under the old "statutes," when each servant had to obtain from the high constable of the division a ticket or certificate of liberty before he could offer himself for hire, and for which he had to pay a fee of twopence. When a master hired a servant he would naturally wish to possess himself of the ticket by repaying the fee, and thus practically bind the servant by preventing him hiring to another place. When the ticket was no longer required the payment might continue, and the power of binding the bargain, which arose out of the possession of the ticket, be supposed to attach to the payment.

It is not unfrequently objected to the hiring at statutes that masters have to engage servants without any knowledge of their previous character, but in the great majority of instances this objection does not hold. Though there may seem to be very little care exercised, farmers probably know much more about the character and antecedents of those they hire than do masters and mistresses in a higher station. In a rural district everybody is known to everybody, and as a general rule servants do not go far from homes, or if they do, something is known about themselves or their families, or the master with whom they have lived. Somehow or other a farmer generally knows a great deal about a man he wants to hire, and if he has not been able to learn much about himself personally, he very likely knows something about his name or his birth place, and our Westmorland farmers think there is much in a name, and firmly believe that such things as industry and honesty, and their contraries, run in families. I don't like the name, or his father before him was an idle fellow; or, he comes of a good sort, and the whole family are honest and industrious, and make good servants, are common observations, and exercise their influence upon the chances and the wages of a youngster who stands his first hiring. Nor is this prejudice confined to names or families. Places have their reputation, and there are localities not always or often within the county, from which a farmer would be as unwilling to hire a servant, and especially a woman servant, as were the tradesmen of Newcastle in the olden time to take an apprentice from the debatable land. Nor is this knowledge of previous character confined to masters, servants generally know something of the place to which they hire, and a hard master or a bad place very soon obtains a wide spread reputation.

But however much we may regret the evils that arise out of the "statute hirings" we shall do well to remember that they are the fete days of the neighbourhood. Hundreds attend them, not for the purpose of hiring, but to mingle with their fellows, meet their friends and acquaintances, "to see and be seen;" and in this respect farm servants do but follow the example of those in a higher position.

In the spring of the year there are two days upon which the streets of Penrith are crowded with young people of both sexes. On Whit Tuesday farm servants assemble in large numbers, some to hire, the great majority for a day's pleasure; on the third Tuesday after Whitsunday, locally called little Whitsun Tuesday, there are just as many young people, the sons and daughters of farmers and others in a higher position than farm servants. They go not because they have any business that day which could not be done equally well on any other market day, but because it has been the custom, and on that day they are sure to meet others like themselves. There is not much difference in the amusements offered or the temptations held out, but the dancing rooms are probably not so crowded and there is less apparent excitement and more decorum on the latter day than on the former. I do not know that there is any other place in the two counties where this distinction is made, and at Penrith it most likely arose out of the necessity of the case, or as a matter of convenience, rather than any unwillingness of one class to mix with the other. Servants and sons and daughters could not on the same day well be spared from home and work.

Of late years farm servants have at "term time" had other ways of enjoying themselves than those

Westmorland.

Mr. Henry Tremenheere.

D. 1.

afforded by the statute hirings; but there has been no diminution, but rather an increase, in the numbers attending these half-yearly gatherings. Cheap trips to some large town, of which farm servants avail themselves, are often arranged more to the profit of the railway company than benefit to those whom they convey. It may be well in some respects that country people should see large manufacturing towns, but they do not derive the same benefit from these excursions as townspeople do from a visit to the country, and some of them learn things it would be much better for them not to know.

But then there is but a choice of evils. If they stay at home every village publican contrives something or other to entice them and induce them to spend their money: Races, wrestling, dancing, shooting at a white, and other amusements are provided, all innocent enough in themselves, but fruitful of evil owing to the conditions under which they are available. The following programme of "annual sports" held last autumn at a public house in a neighbouring village, is a fair specimen of its kind:—"A handsome saddle "will be given to trot for, open to all comers; also a "double-reined bridle to trot for, for horses in the "parish of R——. The winner of the saddle will be "debarred from running for the parish bridle. Prizes "will also be given for wrestling, running, leaping, "and other amusements, and a copper kettle to shoot "for. Wrestling to commence at 1 o'clock. A ball "in the evening." These sports are held either the week after the term, when the farm servants are at liberty, or at some vacant time of the year, between haytime and harvest or after harvest, when they can be spared for half a day from their work. The men attend in the afternoon and the young women join them in the evening for the dance, and as the innkeeper's object is to sell as much liquor as he can, the conduct of those present is not always what it ought to be and sometimes most objectionable, and the return late at night, when the young women expect the young men to see them home, is not conducive to morality.

That these "sports" are got up by the publican entirely for his own benefit, there can be no doubt; but the very fact that they are generally well attended and pay may teach us an important lesson. They supply a social want, which neither reading rooms nor parochial libraries nor school teaching can either supply or destroy; and if we wish to lessen the evils of statute hirings and village sports, we must find a substitute for them, and as the lawyers say, it must be *ejusdem generis*.

In rural districts the people want opportunities of meeting each other, and say what you may they will come together somewhere and somehow. And why should they not? One of the best things that could be done for this county would be that each district should have its fete days fixed and settled, when and where the people could assemble, join in such amusements as were provided for them, and return home by daylight.

There might be difficulties, and so long as it depends on local effort these are many and great; but if there was any competent authority to fix the day and place and prepare a programme and exercise proper supervision, the difficulties would all vanish and statute hirings as well as public-house sports would soon cease to be popular, if they did not cease to exist.

Some 12 or 14 years since an attempt was made to have a festival which all classes might attend, and very great success attended the effort. At the village of Reagill (in which, by the way, there is no public-house) a yeoman (Mr. Bland) had a very nice garden laid out in terraces and adorned with statuary and paintings, his own handiwork. Once a year in the month of June a day was fixed upon which anybody was at liberty to go to this garden, a band of music was in attendance, and tea was provided for all who chose to partake of it at 1*s*. each, and during the afternoon and evening the proceedings were varied by speaking, singing, and dancing. This was continued for several years, and on no occasion from the beginning to the end did I ever hear an improper expression, or witness, with one single exception, the slightest misconduct on the part of any one of the many that were present.

Some years afterwards something of the same sort was begun and goes on still at Warcop, with this advantage, that it was grafted upon a custom of long standing, the Warcop rushbearing. On the morning of St. Peter's day (June 29th) the children of the village assemble in front of Warcop Hall, each bearing a garland of flowers. After receiving some refreshment they walk in procession to the church, the garlands are taken and fixed in the accustomed place, where they remain until the following year, and there is divine service. In the afternoon the hall grounds are placed at the disposal of the committee of the Warcop reading room, who charge 1*s*. admission fee, for which they provide tea and music. When first begun there was speaking, the same as at Reagill, but now the only amusement is dancing. Very large numbers attend this annual gathering, and the proceedings are orderly and decorous.

Since I came to Kirkby Stephen we have established shows of flowers, poultry, and dogs, not because we can produce either beautiful flowers or good poultry, but because it is very desirable to bring the people together now and then, and almost anything will do for an excuse. Of course we have a band of music and the people dance on the green sward, but no drunkenness nor incivility in word or act would be tolerated. Probably we owe much of the success of our gatherings to the introduction of a novel feature in the dog show. There are in this district large flocks of sheep, and a number of shepherds' dogs remarkable for their sagacity and the perfection of their training, and not only is there a prize given for the most beautiful, but also for the most accomplished, and they are tried on the field. For this purpose we hire or buy about 40 sheep, and three of these being placed at one end of a long field and the dog and his master at the other, it is the business of the shepherd to direct his dog to fetch the sheep around a post near which he stands and carry them back again, and this without either "hurry or worry." The skill consists in getting the dog well beyond the sheep without alarming them, in keeping them well together, and heading them in the right direction, and in driving without chasing them, and it is difficult to know which most to admire, the skill of the dog or of his master.

But I do not think it much matters what kind of amusements are provided, if only they be innocent. Anything does for an excuse, and so long as you can induce people of different classes to attend, and secure proper supervision, you have done all that is needful; and he who can successfully gather together the people of a district and give them an afternoon's enjoyment, and send them home by daylight pleased with themselves and each other, has done a good day's work, of which he need not be ashamed, whatever his strait-laced friends may say to the contrary.

The greatest difficulty in the way of starting and carrying on one of these holidays is local rivalry. It is just the same as with fairs and markets. If you begin one and it is likely to succeed, another is started at some neighbouring village, and both go on until they destroy each other; so with amusements for the people. If an attempt has succeeded in one place, the neighbouring villages immediately try the same thing and the year following there is a struggle who can secure the most suitable day, or two are held on the same day, and as a consequence the numbers attending are divided, the expenses exceed the receipts, and there is failure and disappointment. Nor will this ever be remedied until the fete days of a district are fixed by some competent authority, as were the statute hirings by the high constables of old.

What we want in country districts are gatherings of the people for amusement and for pleasure under better regulations and apart from evil influences, and until we have such gatherings statute hirings and village sports will continue to be as popular and as much frequented as they are now. I do not think our farm servants and farm labourers care much about

having their hours of labour shortened. They always have been, and I trust always will be, willing and able to do a good day's work, and at a busy season are not particular about an hour or two of extra time; but what they would like, and what they much need, are a few more holidays and some means of rationally and innocently, but thoroughly enjoying them; and their main feature must be that there and then each can meet many others like unto himself.

On this side of the county farm servants have three meals a day in winter, namely, breakfast of porridge, milk, bread, and cheese, and sometimes coffee; dinner of puddings or "dumplings," meat, and vegetables; and supper of bread, cheese and milk, or porridge. In summer an additional meal is given about 4 o'clock in the afternoon, called "drinking," which used to be bread, cheese, and beer, but now tea is sometimes substituted. On the Kendal side they have bread, cheese, beer, or coffee about 10 o'clock in the forenoon as well as 4 in the afternoon, making five meals a day; but I believe they work longer hours than on this side of the county.

The bread used is the best brown wheaten bread, very seldom "barley or booted." Around Kendal oat cake or "hafr bread" is still in common use. The cheese is very seldom home made; the farmers find it more profitable to give the skim milk to the calves and buy Dutch cheese for the use of their households.

But we should form a very inadequate notion of the condition of the agriculturists of Westmorland if we did not take into consideration a numerous, industrious, and most frugal class of men, who, though occupiers of land and their own masters, work as hard as any of our labourers and fare much more frugally than do the servants in a large farmhouse. They occupy farms from 20*l.* to 70*l.* a year rent. Their savings when in service have helped them to stock these farms, and they manage and work them by their own labour and the help of their wives. They can afford no luxuries nor indulgences, and taste fresh or butcher's meat on the average about once a week. Their midday meal is tea and bread, and perhaps a "fried collop" and an egg when eggs are plentiful; their clothing does not cost them much, for they wear what they had before marriage; beer they never use unless it be a five-gallon cask in haytime, and though they generally keep spirit in the house, their stock is usually limited to a single bottle, produced on rare and special occasions. Their families are brought up to work from their earliest infancy, as you heard it said, "from "the time they can crawl," for when they are regularly attending school the boys help their father to do "the jobs" night and morning, such as cleaning the byre, milking the cows, foddering and watering the horses, and the girls assist their mother in the household work. This is the source from which we draw our supply of labour. As the children grow up they go off and hire into farmhouses, and most excellent servants they make. The girls not unfrequently find situations as house servants, and better material out of which to make such servants cannot be found.

You asked if the employment of children interfered with their education. I do not think it does. When employed at all it is only on their father's farm at particular seasons, and their school life is sufficiently long to enable them to be sufficiently educated for their station in life. In this county you rarely meet with a man or woman who cannot read and write. Even out of the few who sign the marriage register with a cross, the majority could write their names if pressed to do so.

But our schools suffer undoubtedly from irregular attendance or rather long absences, and in that as well as some other particulars we find it difficult to comply with the requirements of the Committee of Council. We have not much difficulty in producing the results, as the children are for the most part quick learners and as intellectual as they are strong and healthy; but results, however good, unless attained in the one only way, count for nothing, and as that Procrustean bed they have in "the office" was made to fit towns and populous places rather than rural districts, we very often find ourselves either too long or too short for its dimensions.

It is an easy thing to declaim against the thoughtlessness and selfishness of parents in keeping their children at home to work when they might be at school; but the time a boy is kept at home and employed upon his father's farm at a busy season is not always "time lost." Should he have by his daily labour to earn his daily bread, it needs that he observe and see and learn things that may concern his after-life quite as much as book knowledge. Some years since I had a lesson upon that subject which I shall not easily forget. At a meeting of guardians of the Westward Union a fine strong-looking boy about 14 years of age, who had lived in the workhouse from his infancy, was brought before the board, and it was proposed, if a situation could be found, that he should be sent to a farmhouse and so much a week paid with him. After some discussion as to the amount, I said it was a shame that we should have to pay more than a shilling a week with a boy like that, and if no other place could be found at that price I would undertake to provide him with one. Eventually he was thrown upon my hands, and I directed him to be sent to a farm in which I was interested. A day or two afterwards I had occasion to visit the farm, and the boy, glad, I suppose, to recognize some one he had seen before, ran forward and placed himself in my way, touching his cap and looking much pleased. "Well, my boy," said I, "you have got here." "Yes, sir," said the lad; and wishing to give him a sixpence, I told him to go and get my horse out of the stable and bring him to me. "Yes, sir," said the boy, glad to be noticed, and away he ran. While in conversation with another with my back towards the stable door, my attention was aroused by the loud laughter of the other men, and on looking round I saw the poor lad trying to hold the horse, with the bridle over the head indeed, but the bits not in the mouth, and the saddle set on the wrong side before. This was only one of his many absurd mistakes, and though the others were good-natured with him upon the whole, they could not always resist the fun of allowing him to get into some ludicrous scrape. And yet the boy knew more Bible history, church catechism, and geography, and could read, write, and cast accounts a great deal better than the majority of those who laughed at him for his ignorance of common things and their uses.

When people are poor and old and feeble, and have no near relative to care for them, they are much better in the workhouse where they are kept clean and comfortable; but since my experience of the workhouse boy I have always advocated the policy of keeping children outside its walls, and if they must needs be brought up in the workhouse, then, wheresoever and whensoever practicable, let them go out as much and as often as possible, and see what is going on around them, and learn something of ordinary every day life, and things in common use.

And for somewhat similar reasons I have always been tolerant of absence from school at busy seasons, because though it unsettles your school, disarranges the classes, and is very trying and inconvenient to the master, yet are the boys learning that which is important and useful, and that which a certificated master cannot always teach them, the difference between a *copystyal* and a *cowrak*, and their different uses.

That the agricultural labourers of this county are honest the calendars at the assizes and the sessions bear ample testimony. Of the few persons charged with offences the majority are vagrants.

That they are frugal and save money may be inferred from the deposits in the savings banks, and the fact that out of their savings, when in service, many of them are in the course of a few years able to rent and stock a small farm of their own.

That they are sober may not perhaps be so readily admitted, because whether deservedly or not the county has not in that particular the best of reputations. But as a class I have not the slightest hesi-

Westmorland.

Mr. Henry Tremenheere.

D. 1.

tation in saying that the agricultural labourers are temperate. At term time, that is, twice a year, they may appear wanting in sobriety; but it should be remembered that they are entirely unaccustomed to take beer or spirit; that they are in vigorous health and high spirits, excited by the occasion and the meeting of old friends and acquaintances, and one or two glasses has upon them a much greater effect than upon a well-seasoned toper; and that it is not fair or just to judge them by what you may see at term time. Inquire into their daily life and habits, and calculate how much beer or spirit they consume in a year, and you will find them remarkable for their sobriety.

That there are people in Westmorland who drink to excess there can be no doubt, but they are not agricultural labourers, nor can the farmers as a class be accused of intemperance. They may get a glass or two on a market-day, and walk less steadily or talk more loudly than they ought, but they are not habitual drunkards, and many of them never taste beer or spirit from one market-day until another.

Amongst the most habitual drunkards in the county have been very often found those to whom legacies out of proportion to their position in life have been left. From time to time men have gone from Westmorland (younger sons), succeeded wonderfully in business, and bequeathed their accumulated wealth to their humble relatives at home, and though not many are quite so bad as the man who when he found himself entitled to a legacy of several thousand pounds stayed in bed all day considering what alterations he should make in his mode of life, now that he was a gentleman, and came to the sapient conclusion that he would have port wine to his thick porridge; still they find it difficult to adapt themselves to their changed fortunes in any better way than by frequenting the public-house, standing treat to their neighbours, and being king of the company. The numbers within my own knowledge that have been ruined and destroyed by having legacies left them in this way are not a few; and to their conduct and its sad end the county owes much of its reputation for intemperance.

It is said that the women are "immoral" because a larger per-centage of the children born in this county are illegitimate than in other districts. But surely there are other facts to be considered, quite as important and as necesssary, to enable us to form a just conclusion upon that subject, as the per-centage of illegitimate children. To compare the number of illegitimate births with the number of single women between the ages of 15 and 50 would be much more fair, but even that would not be a safe test unless we also considered the proportion of single women to the population and the lower per-centage of births and marriages as compared with other counties. And in a thinly populated district the children of a man and woman living together as man and wife without being married, or where the marriage is not legal, are registered as illegitimate, whereas in more populous places nothing would be known about the parents or their antecedents, and their children would be reckoned as legitimate. Again, more than one or two cases have come within my own observation in which a woman has had four or five bastard children in as quick succession as if she had been married, and you can only say of her that she is immoral enough to bring shame upon herself and discredit upon all connected with her, but not sufficiently immoral to save the credit of the county in a table of statistics. If before jumping to a hasty conclusion from the large per-centage of illegitimate births men would carefully weigh and compare these and other facts that might be adduced, they would learn that even in this particular the people of Westmorland compare favourably with those of other districts.

It is, however, satisfactory to know that this "immorality," be it much or little, does not arise out of the custom of men and women living together in farmhouses. Since I saw you I have looked into this question more carefully and find that out of 17 cases of bastardy heard before the magistrates of this division in the years 1867 and 1868, there was one only in which the parties had been fellow-servants and lived in the same house, and one other in which the putative father was the master's son, the mother the servant girl, and in neither case was there a word said in evidence that could lead to the inference that there was fault in the sleeping arrangements. You hear people talking continually about what must needs be the consequence when men and women are thrown so much together as are servants in a farmhouse, but as a matter of fact it very seldom happens that a man pays any attention to a woman with whom he is living as fellow-servant; and if it were so, and noticed, the master would take the very earliest opportunity of sending one or both of them away, because, as he would say, they would be "minding "each other much more than their work, and that "did not answer for him."

That "statutes" or "hirings" are full of evil and danger and temptation to young women there can be no doubt, though they are less so since they could go and return by railway, because they have the protection of company. Some years ago we tried to establish a register office with a view of superseding the hirings, but it did not succeed, masters like to see the servants before engaging them, and servants are unwilling to give up a day's pleasure. Good has been done at this place by providing suitable refreshments at a reasonable price, and thus making it less necessary for the women to go to public-houses, and for this movement the Temperance Society deserves credit.

But the greatest mischief arises from the evil custom of "night courting" or "sitting up," and if that could be stopped a great step would have been made in the right direction. When a man in the position of farm servant wishes to pay his addresses to a young woman he goes, after the family has gone to bed, to the house where she lives, knocks at the window of her room, induces her to come down and let him in, and sits with her in the kitchen or the parlour the greater part of the night. The girl is of course most anxious to conceal from her mistress her conduct in "sitting up," consequently she places herself entirely in the power of her lover; and as it not unfrequently happens that men who are unwilling to marry because they would thereby place themselves in a lower position and have to do inferior work, and equally unwilling to restrain their passions, go after girls much younger than themselves for the basest of purposes, take a most cruel advantage of their weakness and want of protection, and ruin them against their will. In a town such men would find other means of gratifying their lusts, and illegitimate children would not be the consequence; or if married men could retain their situations as ploughmen or "topsmen," and wages were paid entirely in money, and cottages could be had, such men would marry and young girls be saved from much temptation.

Taken upon the whole, however, there are few counties of which that can be said, which was reported of the county of Westmorland to the Quarter Sessions in October 1862, by the chief constable:— "It is in my judgment," he says, "worthy of special "mention, that in the superintendent's returns for "the county of Westmorland there is not one person "or house recorded under the respective headings of "'known thieves and depredators,' 'receivers of "'stolen goods,' 'prostitutes,' 'suspected persons,' "'houses of receivers of stolen goods,' 'public-"'houses of bad character,' 'houses of ill fame,' or "'other suspected houses;'" and, so far as I know, this is as true of the county now as when reported. The public-houses are for the most part respectably conducted, and we have very few beer-houses in the district.

Owing to the custom of lodging farm labourers in the farmhouse, cottages are not so much needed, but the great majority of those we have are, so far as I have seen, sufficiently commodious and decent. Rents vary very much according to locality, from 2*l.* to 5*l.*

a year, and there is generally attached to the cottage a small portion of garden ground; but so far as my own experience extends I do not think agricultural labourers care much for cultivating a garden. It used to be the custom for a labourer to plant a "stitch" or two of potatoes in the farmer's field, he finding the seed and the manure, and the farmer carting it for him and ploughing the land; but this is not now so commonly practised. I suppose the farmers do not find it pay.

The yeomen or "statesmen" who farm their own land are rapidly disappearing from the county, and their holdings are passing into the possession of large landowners. There may have been more causes than one for this change, but no one thing has contributed more to bring it about than the Wills Act of 1837. Before the passing of that statute the eldest son of the family looked forward to inheriting the estate, which was generally of customary tenure, and the father had no power to will it from him or charge it with legacies for younger children, except by a troublesome and expensive process to which he would not willingly resort. Should he wish to leave portions to his daughters he had to provide them by his own industry and thrift, and the younger sons had to look out for themselves. As a consequence the yeomen were not only more frugal, as a class, but most of them sent a son either into one of the professions or business; and there is no county that can boast of more successful men than can Westmorland. There youths were honest and industrious, persevering and careful, and at the same time too proud of their family to do aught to disgrace it, and knowing that they must for their success in life depend upon themselves they did well. The eldest son stayed at home, took pride in the estate which would eventually be his own, and followed in the footsteps of his father. Then came the change. The Wills Act was passed, which enabled the Westmorland statesman to cast the burden of providing for his younger children upon his successor. Instead of striving and saving, and doing as his fathers had done before him, and giving his children a fair start in life, he could charge his son's inheritance with the portions of his younger children, and consequently persuade himself that there was no obligation upon him to do this out of his income; and the children, instead of going out into the world and providing for themselves, "sauntered" about home, "living upon expectations." The eldest son, not being sure of the inheritance, felt less interest in the property, and the younger sons could not divest themselves of the hope that they might supplant their elder brother, hence came jealousies and wranglings and divisions amongst them.

Again, in disposing of his property by will, the yeoman generally erred in valuing his land much too high, and made the legacies so large as to leave his eldest son poorer than he intended. Then came the mortgage to pay the legacies, and the first mistake made was in borrowing less than was really needed. This led to the want of capital to manage the farm, buying stock, or credit too dear, and selling under pressure at a disadvantage. Three years soon passed away and then came a renewal of the mortgage and a year's interest added to the capital sum, because the money was needed to pay the attorney's fees, and so it goes on, the farm neglected, the debts increasing year by year, the owner troubled on every side until he is obliged to sell, and it is well for him if he does this in time to save out of the wreck sufficient to enable him to stock a farm of the same size and value as that which was once his own. You hear it said that yeomen often do well as farmers of the land upon which they could not live as owners, but that admits of easy explanation. The payment of interest upon the mortgage and expenses probably amounted to as much as the rent, and over and above the wear and anxiety involved, the owner had very often not sufficient capital to go on with. As it was expressively said of such a one, "he had to hop off one twig on to "another, and never had time to make anything."

It is all very well to talk about the justice of giving a man's children an equal share in his property. It is not a question of justice but of policy, and if it be desirable to prevent large landowners adding field to field, then should small landowners find it as difficult as possible to dispose of their property by will, and especially difficult to burden it with portions for younger children. If the Wills Act of 1837 had never come into operation there would still have been a goodly number of statesmen in Westmorland, and they would have been as industrious and provident and *independent* as their forefathers; their younger sons would have followed the example of their uncles, and gone out into the world and found for themselves a place and a name, and the elder sons would have succeeded to the property unincumbered, and would have been in the forefront of agricultural improvement and progress. As it is, their best friends and wellwishers can but commiserate the position in which, by no fault of their own, many of those who remain have been placed. They must soon cease to exist, and the honest, independent, fine-hearted old greycoats, "Westmorland statesmen," will soon be amongst the things that were.

I have to express my regret that I could not give more time to this subject, and my hope that these remarks may in some small measure help you to form a right judgment of the condition of Westmorland and her people.

Yours very truly,

J. H. Tremenheere, Esq., JAMES SIMPSON.
Assistant Commissioner.

---

2. LETTER from Mr. GEORGE BROWNE, of Troutbeck.

SIR, Troutbeck, Dec. 2, 1868.

I AM in receipt of yours of the 20th ult., I have not returned the circular that accompanied your letter, so very few of the questions apply to our system of agriculture in this part of the county; the labourers employed in agriculture are mostly young unmarried men, who are lodged in the farmhouse and live very much like their masters. The married men find it more profitable to work as day labourers at other kinds of work, a great many are employed in the neighbourhood of Windermere village, cutting foundations for new buildings, gas works, bobbin mills, &c.

For a few week in summer married men are employed on the farms during hay time and harvest (the first generally requires much more time), it is usual to hire a man for a month. Last year a good man would get 5*l.* for the month, together with meat and lodging; when hired in this way it is understood that they will have to work longer hours than common labourers at other kinds of work; women and children are scarcely ever employed at agricultural work, except a few fine days during hay time, when a woman haymaker will get about 1*s.* 6*d.* per day, and a boy from 12 to 14 will get about as much. The cottages are generally roomy and well ventilated, most part of them have at some time been farmhouses, and as the land gets into fewer hands some of the old farmhouses are turned into labourers' cottages.

You ask for some information about the "statesmen" of Troutbeck, I find there are only about six who are occupiers of their own land, having no other occupation than cultivating their land; there are one or two who live on their own property, and are also renting more than they own; there are two others who live on small pieces of land of their own, and also carry on the occupation of joiners and wheelwrights. The largest number of acres owned by one person of this class is about 800 acres, and the smallest about 100. The number of persons who are owners of small farms is gradually decreasing. There have been two farms of this description sold within the last three weeks; one farm containing 122 acres, let for a rental of 66*l.*, was sold for 2,588*l.*; and the other, let for 101*l.*, sold for 3,835*l.* These places were sold in several lots, and (with exception of 15 acres) have been added to larger farms.

It seems to have been an invariable custom at one time for the second son to go into the Church; in some

Westmorland.

Mr. Henry Tremenheere.

D. 1.

families two or three sons have been clergymen, this was when they could be educated at Bampton and St. Bees; at the present time it is too expensive for the smaller "statesmen" to make their sons clergymen, It is usual at the present day for the sons to remain at home until they get married, and then for them to take a farm for themselves; sometimes when there are more than one farmhouse and buildings on an estate, at the death of the parents they are divided amongst the sons.

I am, &c.
GEORGE BROWNE.

J. H. Tremenheere, Esq.,
Assistant Commissioner.

---

3. LETTER from Mr. THOMAS NICHOLSON, schoolmaster.

SIR, Dufton, B.S., Jan. 2, 1869.

1. I DULY received your note of inquiry respecting the state of elementary education in my neighbourhood, particularly as to the employment of children in farm work during the busy seasons.

2. My abilities as a teacher and my opportunities for forming any well grounded opinion on the subject under inquiry have evidently been greatly overstated to you by a kind friend. Yet I am glad to communicate anything I can for your use.

3. So far as I have been able to learn by reading and conversation with intelligent individuals from other districts of the country I have reason to think that the state of elementary education in the East Ward of Westmorland will bear a favourable comparison with that of any other district in England. The proportion who sign their own names to the marriage register is often mentioned as an index to the state of elementary education, I consider this test a fallacious one, many who are able to write, on account of their timidity, nervousness, caprice, or other cause fail to write their names then.

4. Yet this state, so excellent as I regard it comparatively, is far from satisfactory.

5. One of the leading, but not by any means the only, cause of the imperfect education with which a considerable number of the labouring classes are allowed to grow up is their too early withdrawal from school to assist in farm work.

6. Some of the evils arising from the irregular attendance of children at school are, (*a*) the necessity of repeating the lessons given in their absence to the rest of the class, or of allowing the absentees to go without them; thus (*b*) retarding the progress of the regular attenders, (*c*) the average attendance is kept down, (*d*) a smaller number attain the 200 attendances necessary to qualify them for examination, (*e*) of those who reach the requisite minimum attendance or a little over, there are some who distribute it so irregularly over the year that they are unfit for examination as regards attainments. The three last-named causes tend to reduce the Government grant to a considerable extent. All these causes combined make it impossible for the teacher to be satisfied with himself, if he be a conscientious man; or to satisfy the managers, the inspector, or the parents. Of course the moral character of the children is much impaired both by the actual practice of such irregularity themselves, and by witnessing it in others.

7. Viewing these evils from my own stand point as a teacher, I was at one time prepared to pronounce in favour of compulsory education, but on considering the matter more in its practical bearings I am now scarcely prepared to go so far.

8. The parents in deciding between the immediate gain likely to result from employing their children at home when they ought to be at school, and the prospective distant and somewhat uncertain gain they expect from a good education are greatly influenced by the principle briefly expressed by the old proverb "A bird in the hand is worth two in the bush."

9. Some of the irregularity is, in my opinion, attributable to the schoolmasters themselves. Several have certain fixed periods, as quarters, and if a child attend but a week or two at the close he is charged for the whole quarter. Frequently the scholars miss a few weeks solely for this reason. If occasional holidays were given only in cases of absolute necessity the attendance would be more punctual. When parents and children see that trivial causes form excuses for the master's absence they readily follow his example.

It is almost useless to insist upon a higher morality in the children than they see exhibited in the teacher's conduct. Irregularity in teacher produces irregularity in scholar. When the villagers are persuaded that they have an earnest and efficient teacher, who takes an interest in their children's progress and welfare, I believe that unnecessary absence from school will be very small.

On first reading my views may appear scarcely reconcileable, but after minute and careful inquiry I believe you will find them fairly correct. At least I consider them so with my present limited means of deciding. Wider information might modify them. If I can give you any farther assistance, I shall be glad to do so.

Many of the thoughtful part of the community in this district I find are in favour of a compulsory system. I think it ought to be reserved as a last resort. Every possible reform and improvement of the teaching organization should precede.

I am, &c.
THOMAS NICHOLSON.

J. H. Tremenheere, Esq.,
Assistant Commissioner.

---

4. LETTER from Mr. CRAYSTON WEBSTER, Kendal.

DEAR SIR, Kendal, May 28, 1869.

I HAVE pleasure in sending you a few remarks upon the condition of the agricultural labourers in this my native county of Westmorland, and will take the points raised by you *seriatim*.

1. Excepting at the seasons of haytime and harvest, females are not employed out of doors to any considerable extent. In the great majority of cases farming servant men, boys, and maids are hired half-yearly and live in the farmer's house, often sitting at his table, and forming for the time part of his family. Servant girls are a good deal employed in the outbuildings, in milking and attending to the live stock, but are rarely seen working in the fields. As an exception it may amuse you to know that a widow farmer of my acquaintance used to do her own *ploughing* with two horses herself, and a very good hand she was!

Near towns and villages it is not uncommon for women and girls to be employed in weeding or thinning turnips by the row or day. This of course is only for a very short period and at a pleasant time of the year. On the whole I do not think that the employment of out of door female labour is carried to an undue extent, but is often a means of a very welcome and needful addition to the poor man's income, enabling him perhaps to rub off his arrears of rent or to procure himself a new suit of clothes or a pair of boots. There may be too much squeamish delicacy in interfering with female labour.

2. The "public gang system" is unknown here. You remember telling me you had unexpectedly discovered a case near Penrith, but I don't know whether or not it was in this county, the boundary of which runs close up to that town in Cumberland. You will observe in my report to the Royal Agricultural Society that the agricultural customs vary remarkably, those on the northern side assimilating to those of Cumberland. I can only say that in my constant professional excursions to and fro in every parish for many years I have never met with anything of this character.

3. Turnips are generally singled or thinned by the hand or hoe.

4. The great drawback of small farmers of, say, from 30*l.* to 60*l.* rent is insufficiency of capital, but indeed the same remark applies to nearly all our farmers. It is very common for a "servant man" and his fellow servant girl or small farmer's daughter

to marry, both possessing only a trifle of cash, but with character and credit to borrow a little more, and so manage to set up housekeeping and farming in a humble way, when by the most self-denying thrift and industry they contrive not only to pay the rent, but to manage the land satisfactorily and bring up their children respectably, though "hardfully," and by degrees attain to a larger farm. I am of opinion that to absorb all these small holdings in large ones (notwithstanding more expense in keeping up the homesteads) would be ultimately found to be unwise and impolitic. There are many advantages in moderately sized (not too small) farms. Higher rents are obtainable, more attention is paid to the production of butter, eggs, poultry, honey, and other useful minutiæ which the large farmer deems beneath his notice, and they are the best producing grounds for relays of well brought up and efficient servants and labourers. I know many who, with very small beginnings indeed, have progressed from less to more and filled in their way respectable social positions. Many years ago I had a day labourer in my employment who, on the strength of his small savings and a loan, married and scraped up as much as enabled him to take a small farm under my agency, which he has cultivated almost like a garden, and after rearing a large family, now mostly gone to service, he is looking out for a larger farm. Now if there had not been in his own neighbourhood and within his limited reach a farm small enough, he must have remained a labourer all his life, with perhaps only the prospect of the workhouse in his old age. I look upon this class as one of the groundworks of our national stability. Neither do I condemn the arrangement of large farms under proper circumstances. I think a mixed system is the most advisable.

5. It must be admitted that small farmers do employ their children, somewhat to the detriment of their education, but I think this is improving, and will improve by degrees as the schools and other educational facilities improve, and as public attention is directed to and legislative action taken on that most important point.

6. It cannot be doubted that in very numerous instances (as to my own knowledge) there are old fashioned farmhouses wherein defective bedroom arrangements conduce to the unfortunate notoriety of our county for an undue percentage of illegitimacy; but there are other causes which do not lie on the surface, and if these were all rigidly investigated I believe this stigma would be materially lessened. It is a delicate question which we can only leave to the good sense and advancing intelligence of the people. It would be well, however, if the general feeling were more strongly pronounced and more social dishonour and loss of caste attached to both parties guilty of this evil; and, further, every landowner may well consider whether any share of the blame and responsibility lies at his door.

7. I certainly do not see my way to the abandonment of keeping farm servants in the house. Whenever you wish suddenly to change ancient custom you always find deep-rooted, obstinate, and widely ramified obstructions. One great difficulty would be the want of suitable extra dwellings on our comparatively small and poor farms. It is most desirable and necessary that more and better cottages be provided for the labouring poor. There has long been culpable neglect in this respect, and in no case is the breeches pocket more carefully buttoned than when any outlay is called for to rebuild or repair the ancient cottages. Consequently the poor are driven into towns and villages where they and their children fall under debasing influences, and drift into other employments and unsettled habits, to their moral and physical deterioration. So now we have the universal outcry that farm men servants, girls, and day labourers, are not only scarce and consequently dear, but idle, careless, and inefficient. I am certain that the erection of suitable cottages, each with its nice garden plot, although perhaps not directly remunerative, in the hard, selfish, business point of view, would ultimately be the best investment any large landowner could make, irrespective of any moral obligation, as providing plenty of efficient servants and labourers, attaching them to the soil and parishes, and facilitating kindly sympathies and elevating influences.

I am, &c.

CRAYSTON WEBSTER.

J. H. Tremenheere, Esq.,
Assistant Commissioner.

---

5. LETTER from Lieut.-Colonel RIGG, Morland.

DEAR SIR, Crossrigg Hall, June 14, 1869.

I HAVE much pleasure in writing you a few particulars as to the wages I give for labour in agriculture.

For a married man, who is allowed a cottage and garden rent free, 15*s.* a week the year round, and 1*l.* extra for hay time.

Men on regular wages paid fortnightly, whatever the weather may have been:—

	£	s.	d.
Martinmas and Candlemas	0	15	0
February to May	0	16	6
June	0	18	0
July, four weeks hay-time	1	5	0
August, four weeks harvest	1	0	0
September and October	0	16	6

For women, according to season, as follows:—

	s.	d.	
Early spring, gathering stones	1	0	a day.
Turnip-sowing time, gathering twitch, and spreading manure	1	2	„
Haytime and turnip-hoeing	1	6	„
Harvest	2	6	„
Autumn, pulling turnips	1	0	„

When there is any extraordinary job in land improvement which cannot be done by piece, such as digging the furrow after the plough, and getting out earth-fast stones, &c. by choosing a comparatively slack time of year in spring or autumn and by making it known a week beforehand, I can get together from 20 to 40 ordinary good men on 3*s.* a day, working weather; no pay if it is too wet to stand out.

Piecework, and above everything draining, is what the men like best and is most satisfactory to the employer. A good man earns a guinea a week at this, and superior hands more. In one drain you may see a couple of powerful men in the prime of life, and in the one next to it an old man and his grandson; both parties equally satisfied that their earnings are measured by their abilities. To the casual observer it appears a very hard life to labour in the wet miry field with clothes plastered by clay from the sides of the narrow drains, but when a man has once taken to this kind of work, if he can find enough of it, he will never go to any other.

Our working day is from 7 to 6, with an hour for dinner at noon. I never pay for over-time, holding that if a man works honestly for ten hours he ought not to do more. In haytime and harvest I give no food, only beer.

A very great disparity will be noticed between the earnings of the casual worker and the man with a cottage and regular engagement for a year. I can only say that those who live out in the villages are constantly catching at any pretence to demand an increase of wages. Whilst on the other hand I am just completing the converson of an old barn into comfortable cottages, and there is great competition for them.

I have one ploughman and one cowman, wages 27*l.* and 21*l.* per annum respectively, boarded with the bailiff. They are very troublesome, and from the insight I have had at petty sessions to this kind of service I am determiued to have as little to do with it as possible.

As for a farm servant girl the bailiff's wife tried having one, but gave it up after the first half year, saying she had rather do all the work of the house herself than be troubled with a lass! Of course mine is not a dairy farm.

My opinion is that a farm house ought to be the best place of training for the young people of both

Westmorland.

Mr. Henry Tremenheere.

D. 1.

sexes, but that from inadequate sleeping apartments and from laxity on the part of employers as to the moral conduct of those who are inmates of their houses, a great deal of immodesty prevails amongst farm servants, which renders them unsettled and bad to manage, whilst it swells the Registrar-General's returns of illegitimate births; but further allusion to this subject would lead to a question apart from the one with which I started.

I am, &c.

J. H. Tremenheere, Esq., Assistant Commissioner. H. Rigg.

8. RETURNS relating to the Condition of COTTAGES in 92 Parishes and Townships of WESTMORLAND and CUMBERLAND.

Name of Parish or Township.	State of Cottages.
WESTMORLAND.	
Bongate	A great want of cottages, far from sufficient for the farm labour, separation of the sexes not popular or generally practised.
Grasmere	Cottages sufficient and not overcrowded.
Hutton Roof	Fairly sufficient but not well ventilated.
Brough	Cottages bad, insufficient in some, and insufficient to separate the sexes properly.
Crosby Ravensworth.	Cottages fairly good, but not so well ventilated as they should be.
Middleton	Cottages very inferior, ventilation defective.
Kirkby Thore	Cottages good.
Whittington	Tolerably good but ventilation might be improved.
Morland	Generally good but ventilation might be improved.
Shap	Cottages not good, for the most part small, and often only one sleeping apartment, ventilation generally very bad.
Kirkby Lonsdale	Cottages not very good and not well ventilated.
Heversham	Cottages in fair condition but not nearly sufficient for the supply of labour; not well supplied with water.
Beetham	Cottages pretty good, but overcrowded, seldom more than two bedrooms, and occasionally only one.
Applethwaite	Cottages bad, not near enough of them, not conveniently situated, often overcrowded, bastardy and ante-nuptial fornication very prevalent, very badly supplied both with air and water.
Brougham	Cottages good, but not sufficient for the labour.
Kentmere	Cottages good in every respect.
Burton	Cottages upon the whole good and tolerably ventilated.
Orton	Cottages generally good and sufficient for the population.
Casterton	Cottages very good in all respects.
Clifton	Cottages in fair condition.
Warcop	Cottages rather small.
Long Marton	With some exceptions the cottages are in good condition.
Ormside	Cottages sufficient for the present, but not enough to allow of any increase of population.
Lowther	Cottages generally clean and comfortable, sufficient in number, and generally well ventilated.
CUMBERLAND.	
Bassenthwaite	Cottages generally good, but few have gardens.
Holm Cultram	Cottages rather above the average and not much overcrowded.
Great Salkeld	With few exceptions cottages in a good condition and sufficient for the supply of labour, the ventilation fair.
Millom	Cottages are of all conditions, but sufficient.
Keswick	There has been a considerable increase in the number of cottages of late years, but the ventilation is imperfect and they are often overcrowded, to the moral injury of the occupants.
Bootle	Cottages bad, and generally only one convenience to several cottages, and some have no access to any.
Scaleby	The condition of cottages is better than their outside would indicate, as mud and thatch make very dry and warm houses, but there is great room for improvement.
Kirkoswald	Many very bad cottages, "bad as they need be."
Nether Denton	Cottages good and sufficient.
Ireby	Cottages fair for a country village.
Farlam	Cottages fairly good, sufficient for the supply of labour.
Hutton	Cottages good and sufficient.
Dacre	Cottages good and enough of them.
Irthington	Cottages want improvement, too small and deficient in the most necessary conveniences; they are overcrowded and illegitimacy frequent.
Brampton	Cottages badly ventilated and overcrowded.
Sebergham	Many cottages empty and many in ruins, those occupied capable of great improvement as they are constructed without any regard to morality.
Stapleton	Cottages sufficient in number but not nearly large enough; in some a whole family live (cook, eat, and dress) in one room, very few have more than two, privacy is unknown in many, morality suffers in consequence, ventilation generally most imperfect.
Cleator	Cottages generally speaking sufficient, but the tendency is to overcrowd them and the result is to reduce the moral status.
Wetheral	Much required to be done to cottages, more are required, and it would be a benefit to the farmers to have them built on their farms, few have more than two rooms, the family all sleeping in the same room in a couple of beds.
Holm Cultram	Cottages in good average condition, but scarcely sufficient for the labour required, more accommodation to be desired, occasional evil results to morality traceable to this cause.
Embeton	Cottages bad, insufficient for the supply of labour, in a few instances overcrowded; ventilation bad.

Westmorland.

Mr. Henry Tremenheere.

D.
1.

Name of Parish or Township.	State of Cottages.
Walton	Cottages some good, some very bad.
Egremont	Cottages in good condition generally.
Kirklinton	Cottages generally good.
Edenhall	Cottages generally good.
Alston	Cottages superior to those of the southern counties, but far from being as good in their accommodation as they ought to be.
Uldale	Cottages generally good, and sufficient for the supply of labour.
Grimsdale	Cottages insufficient in number.
Ainstable	Cottages in good condition.
Plumpton	Cottages sufficient.
Cumwhitton	Cottages tolerably good but not enough of them.
Gamblesby	Cottages generally good and quite sufficient.
Irthington	Cottages have only two rooms.
Castle Sowerby	Cottages generally good.
Croglin	Cottages much improved but several empty.
Ousby	Cottages for the most part good.
Upperby	Cottages capable of great improvement, frequently overcrowded, and many without any conveniences.
Westward	Cottages mostly good and sufficient, many being the houses belonging to small farms which have been joined with other farms.
Caldbeck	Cottages comfortable and large enough.
Bewcastle	Cottages generally good and sufficient in number.
Isell	Cottages in good condition.
Wreay	Cottages pretty good, but difficult to prevent lodgers being taken.
Camerton	Cottages pretty good, but badly supplied with water.
Hayton	Cottages good.
Bridekirk	Cottages fairly good.
Kirk-Andrews on Eden.	Cottages indifferent.
Beaumont	Cottages indifferent.
Ireby	Cottages old but of a fair quality.
Wigton	As a rule cottages good.
Allhallows	Cottages generally good but quite as full as either health or decency will permit.
Irton	Cottages generally good.
Burgh by Sands	Cottages in average condition but inadequate in number, generally overcrowded in regard to health and decency, bedrooms especially ill ventilated, in fact no window ventilation.
Kirk-Andrews on Esk.	Cottages much improved.
Flimby	Cottages require improvement in every respect.
Lanercost	Cottages above the average, but insufficient in number; want of cottage accommodation greatly felt.
Crosby on Eden	Cottages generally small, consisting only of two rooms, consequently often overcrowded and not sufficiently ventilated.
Torpenhow	Cottages generally small; requiring ventilation, and often without conveniences.
Crosscannonby	Cottages far from good and overcrowded; neither well supplied with water nor well ventilated.
Greystoke	Cottages much improved, many new ones built.
Ravenglass	Cottages very bad, overcrowded, badly supplied with water, and not ventilated.
Hesket	Cottage accommodation bad; windows not made to open.
Arlecdon	As a rule cottages not adequate in size for their numerous occupants and but indifferent supply of water.
Castle Carrick	Cottages pretty fair.
Silloth	Cottages not of a first-class and not properly ventilated.
St. Bridget	Cottages good and sufficient.
Addingham	Cottages comfortable and good, only overcrowded where there are large families of children.
Aikton	The condition of cottages bad, and not a sufficient supply.
Gosforth	Cottages good but very few of them, ventilation generally by doors not windows.

1. *Mr. George Drewry*, Holker, agent to the Duke of Devonshire.—Women are only occasionally employed in this part of Lancashire in agricultural labour. Wages are generally so high that no necessity exists for the wives of labourers to seek such employment, and it is only in hay and harvest time that their services are to be had. The labour of children is in request, but not to such an extent as to interfere much with their education. They are employed in preparing peat, in barking, and in the turnip and hay seasons, but seldom under 11 or 12 years of age. They work generally under the superintendence of their parents. We have no gangs.

Wages are high; varying from 16*s.* (the lowest) to to 25*s.* a week. On the duke's estate day labourers are employed; they live in cottages, for which they pay 2*s.* a week, and the accommodation is all that can be desired. The farms in the Furness district vary in size from 50 to 500 acres. There are many small holdings, and I should say that their occupiers contrive to make a living out of them, and on the whole do justice to the land.

This district is much affected by the iron mines, which give employment to a large population and raise the rate of wages.

If we build cottages for agricultural labourers they are certain soon to turn miners. Farmers have no alternative but to board and lodge their men; it is expensive, but it cannot be avoided. There is no part of England in which the labouring classes are so well off as in this part of Lancashire. Labour is scarce, and the sands of Morecambe Bay afford a lucrative employment for hundreds in gathering cockles for the manufacturing towns of Lancashire.

2. *Rev. T. Rigg*, incumbent of Flookborough.—This is one of the principal villages on the shore of Morecambe Bay, and is inhabited chiefly by fishermen and by a class of people called "cocklers." At least 100 boys, girls, and women go on the sands daily, and sometimes twice a day, to collect cockles for the supply of the manufacturing towns of Lancashire. The system is this:—Some person who has, perhaps, himself been a "cockler" forms a connexion with a dealer, say, in Manchester or Preston, and undertakes to supply him daily with fresh cockles, which he purchases from the people who go upon the sands, and sends them off in bags by rail. The occupation is a lucrative one, and a man and his family sometimes earn as much as 12*s.* a day. The children employed go upon the sands as young as 7 or 8, consequently they get no education whatever, rarely even going to the infant school. The occupation is continuous throughout the year. One of the principal cocklers of this place has seven children of from 8 to 17 years of age, not one of whom has received any education. The children and young persons engaged in this business are in a very demoralized condition; they never enter a place of worship, and their language when idling about the streets is disgusting. At 14 boys and girls become so independent that they often leave their parents and lodge with strangers, spending their earnings in drunkenness, even at that early age. It is very desirable that some restriction should be imposed by law on the age at which children are allowed to "cockle." I think none should be allowed to go before 11 years of age. Taking the eight or nine villages on the shores of Morecambe Bay there must be several hundreds of children who, owing to this cockling business, are growing up in a state of heathenism. Quite as much necessity exists for putting this system under regulation as in the agricultural gangs of which I have read. Boys, girls, young men, and women are out for hours together on the sands without the slightest control, and the results to morality may be imagined.

3. *Mrs. Butler*, Flookborough.—I have three girls now on the sands. They are generally absent from home 10 or 12 hours together; in spring tides they have to walk five miles to the banks, which, with a mile to the shore, makes 12 miles going and returning, besides cockling for five hours. They are a bit tired when they come home, and are quite ready for a meal; they have nothing when on the sands but a piece of bread, of which they eat a little bit now and then just to keep off hunger. It is a slavish life, but what are poor people to do? My girls went to the infant school until they were 8, but they have not been to any school since; they cannot read.

4. *Mr. Burrow*, Flookborough.—I have four boys on the sands to-day; they went at 4 this morning, and will return at 4 this afternoon. They have never been to school. For cockling children must begin early; little things 5 years old go out to help a little and to learn. They get a lift in the carts. A good bit of the work is walking. The children live chiefly on tea and bread.

5. *Rev. John Macaulay*, rector of Aldingham.—Women and young children never work in the fields in this part of Lancashire. It is exceedingly difficult even to get a few women to help in hay-making or in

Lancashire.
Mr. Henry Tremenheere.
12.

following the reaping machines to bind up the corn. The wages of the married men, who almost all work in the iron mines, are so high, averaging 5*l.* a month, that their wives see no necessity for going out to work. Those married men who do not go to the mines are fishermen, and their wives are occupied in gathering shell fish on the sands.

Day labourers are very little employed in this part of the county. The farm servants are hired by the year, and are lodged and boarded in the farmhouses. Boys are employed as early as 12 or 13 generally, and sometimes at an earlier age for light work, such as taking cows out and home to pasture and to water, and in hoeing, &c.

There is one employment for children which is very general on the coast of this part of Lancashire, viz., cockling. I may say that all the children of the fishermen and labourers who reside near the shore are employed in this way from an early age. They are generally accompanied by their parents, or by one of them, and the earnings are so considerable that it would be almost too much to expect the parents to resist the temptation to employ their children in this manner. A women and three or four children can sometimes earn 12*s.* a day. In my parish there may be about 30 children thus employed, and they get no education, but only a little instruction at the Sunday school, and not all even that. They begin to work at 7 or 8 years of age, and they consequently grow up in entire ignorance. They become very rough in their manners, and their language is very coarse. I do not think that the practice of cockling leads to positive immorality; for the work is carried on by daylight and on the open sands; but the constant association together of boys, girls, and young women have a bad effect upon their characters. It would be very desirable, if possible, to enforce school attendance upon these children up to a certain age.

6. *Mr. Richard Presow*, Sunbrick, Ulverstone, farmer.—We cannot get women to work out here; their husbands are too well off. We are obliged to get all our work, even weeding, done by our farm servants. The children make more by cockling than they could by working in the fields.

Everybody in this part of Lancashire is well off. Wages are high and employment regular. There is no poverty.

7. *Mr. Malachi Cranke*, farmer, Urswick.—I rent and farm an estate of 300 acres chiefly arable land. I keep 10 farm servants, whom I board and lodge. All the work of the farm is done by them, and it is the only way in which agricultural labour can be obtained. Almost all the cottages here are occupied by miners, and if more cottages were built and agricultural labourers were put into them they would in a very short time turn miners. The mining of this district is not deep mining, but quarrying, and therefore almost any intelligent labourer can quickly learn it.

Our farm servants are difficult to manage; they are very independent, knowing that if they quit one place they can get another directly. I pay my head man 27*l.* a year, with his board. The other servants are paid according to their age and qualifications. They live exceedingly well, meat twice a day. I don't think they save as much money as they ought, and the higher their wages the more inclined they seem to spend them.

8. *Rev. Canon Hubbersty*, vicar of Cartmel.—There is nothing to complain of in the school attendance of the children in this district generally, and the schools are good. The only drawback is the practice of small farmers in withdrawing their children from school at too early an age, and the result is that in a year or two they lose almost all that they had acquired. This is also very much the case with such of the boys as enter farm service at 12 or 13. They have little or no means of keeping up the knowledge they have acquired, for the distance of the farmhouses generally from any town or village is a bar to their attending night schools. Farm servants seldom read anything but the local newspaper. Some years ago I was the incumbent of Allithwaite, a village on the coast, and I saw much of the system of "cockling." It is the only abuse of children's labour that we have to complain of in this district, and I am of opinion that in any scheme for the enforcement of a certain amount of education this class cannot consistently be omitted. In fact they get no education at all, with perhaps the exception of a little at the Sunday school. It was the practice of the parents at Allithwaite when they left the house for the sands to turn such of their children as were too young to be thus employed into the streets to take care of themselves, locking the door of the house and taking the key away in their pocket.

The wages of an ordinary day labourer in this parish are 18*s.* a week, with the privilege of planting potatoes on his employer's land. There is a piece of land laid out in allotments of the twentieth part of an acre each. They are much sought after and appreciated by the agricultural labourers, which I attribute to the smallness of the allotment, being in fact only a small garden (few of the cottages here have any attached). A man who is paid good wages is generally disinclined to serious work in the evenings, but he likes to amuse himself, and on a small allotment he can entertain himself by cultivating a few vegetables, such as early potatoes, lettuce, peas, &c. I attribute the success of allotments here to the fact of their not being large, and being near to the labourers' dwellings.

9. *Mr. J. Lethbridge*, land steward to John Foster, Esq., Hornby Castle.—The whole of the valley of the Lune is purely pastoral. The farms are, with scarcely an exception, grass farms, and therefore very little labour is required. For a farm of 600 or 800 acres a man or two, just to look after the stock and see that the fences are kept in good repair, are all that is required. Under these conditions the labour of children is not needed, and that of women only in a slight degree in hay-making. Wages are 18*s.* a week for a common day labourer, or 15*s.* if employed throughout the year, wet or dry. Farm servants get 28*l.* or 30*l.* a year, but the custom of boarding and lodging men in the farmhouses is not general here. Wages are so high and labour so scarce that we anxiously look to every improvement in machinery. We could not possibly save our hay without machines. Being myself a native of Devonshire, I tried to induce some labourers from the county, who were only receiving 9*s.* a week, to settle in this neighbourhood, where they received nearly double those wages; but after having been a few months in the county they all returned to Devonshire. They missed their cider, and said they could not understand the Lancashire people, nor the Lancashire people them. Almost all our boys go off to the manufacturing districts when they are 12 years of age or earlier, but they get a fair amount of education before that, as there is nothing to interrupt it in the way of early labour. The school of this parish is a private one, supported by Mr. Foster, and is well attended. There is scarcely a child in the parish who does not get a good education. The valley of the Lune is of wonderful fertility, a rich loam in some places 10 feet deep. It is capable of growing anything, but it is most profitable to leave it in pasture. If we wished to grow wheat or anything else, we could not do it for want of labour. The rent of farms varies from 2*l.* to 3*l.* an acre.

The small population is collected in villages. The cottages are very indifferent, but improvements are in progress.

10. *Rev. E. F. Manby*, rector of Poulton-le-Sands.—This is a rather remarkable district, from the very high rent of land of a certain description and the amount of employmentwhich collecting cockles and other shell fish affords to the population, particularly to the children of the labouring classes. The state of education is consequently very unsatisfactory, many children not getting any instruction whatever. Early potatoes are grown here to a great extent, and the people who cultivate them pay a rent for the land at the rate of from 15*l.* to 16*l.* per acre. The soil being light, and the

almost total absence of frosts in spring, this vegetable is produced earlier than in almost any other part of England. Children are employed both in planting and taking up potatoes, of which many hundred tons are despatched by railway to the manufacturing towns.

But the employment which interferes most with the education of children is cockling and collecting mussels. Many are employed as young as 7, the parents being often able to make 1*s.* a day by their labour even at that age. Many much younger children here are employed for the greater part of the day in picking shrimps. You may see in many houses mere infants seated at a table and thus employed for hours together. The shrimps are prepared for potting or tea parties, and children 4 years old can earn in this way 6*d.* or 9*d.* a day. The money made by many people here is extraordinary. 12*l.* a month is quite a common thing, but they get it out of their children's labour, to the injury of their education.

11. *Rev. C. T. Royds*, rector of Heysham.—No women are employed in this part of Lancashire in agriculture, and boys only to a limited extent. Some find employment on the beach in gathering mussels, but it does not in this parish interfere with their education, the children attending school being in the ratio of one-sixth of the population. Our educational state is satisfactory. Wages are high, averaging for day labourers 18*s.* a week. The cottages are good; most of them with sufficient gardens; they grow potatoes chiefly for sale, this being a peculiarly favourable district for their cultivation. For this reason allotments are in request, and I have a considerable piece of ground let off in portions of about a twelfth of an acre. The farms about here are small, none exceeding 200 acres, but they are well managed. There is a fair supply of day labourers from the village. Detached cottages are rare.

12. *Rev. R. Gibson*, vicar of Bolton-le-Sands.—The farms in my parish are small, none exceeding 120 acres, consequently there is little employment for women in out-door labour. The greater number of the children in my parish are engaged in "cockling," for which they are made use of by their parents from 8 years of age or younger. The occupation being almost continuous throughout the year, they get no education whatever; for those who attend the Sunday school, being unable to read, derive little benefit from it. It would be very desirable to bring this class of children, of whom there are some hundreds in the villages around Morecambe Bay, within the provision of some law for the regulation of juvenile labour where the young cannot protect themselves. The parents are generally improvident, and I have known some make as much as 4*l.* a week by their own and their children's earnings. The children and young persons of both sexes work together in groups, and their language and manners are very bad. Boys are hired into the farmhouses as farm servants at an earlier age than they were formerly. The age is now frequently 12 instead of 14, consequently what with the irregularity of attendance while at school, and the early age at which they leave it, the education they have received is of course soon forgotten. The high price of labour has caused the services of boys to be more sought for, particularly in districts where women are not employed in agriculture.

13. *Rev. J. D. Banister*, vicar of Pilling.—This part of Lancashire strongly resembles the fens of Lincolnshire; it is reclaimed moss, and is now highly productive, growing potatoes, oats, wheat, and beans. Perhaps there is no part of the kingdom where the area under potato cultivation is so large in proportion to its extent. Women are scarcely at all employed in outdoor work, but boys are required, chiefly for planting and gathering potatoes and in wheeling turfs to the carts for stacking. The moss provides most of the fuel of the district. The school attendance is very good, one-seventh of the population being under education. The employment that boys get is no more than is good for them. In the winter months the school is very well attended, and at no season do we allow any child to continue absent without a satisfactory cause being shown. If a child should be absent for any considerable time without a sufficient excuse, it would not be allowed to return; this regulation acts very beneficially upon the parents.

Cockling was formerly carried on from this place to a great extent, but the cockles have disappeared, to the great benefit of the parish, morally and intellectually.

The wages of a day labourer are 18*s.* a week, or, if employed throughout the year, 15*s.* The labouring classes are remarkably well off, and there is no poverty. The farms are small, rarely amounting to 120 statute acres. There were many small proprietors, but they have mostly disappeared.

14. *Rev. W. Pedder*, vicar of Garstang.—There is very little employment of female outdoor labour in this parish. I do not think that there is a single girl thus employed, except occasionally to stack turf; neither are women employed, except occasionally in weeding. Even in the hay and corn harvests women are now very rarely employed, nor are boys employed to an extent that affects their education. Planting potatoes and wheeling turves from the moss are their chief occupations. The causes of non-attendance at school are not early labour, but the neglect or indifference of parents. The rural population in this part of Lancashire is diminishing. Wages have risen considerably within my recollection. A day labourer employed throughout the year, "wet or dry," receives 15*s.* a week, and a labourer whose employment is not so regular 18*s.* Cottages are being rapidly improved. I invariably require those built under my direction to have three bedrooms; but it will be long before this is universal, and it is difficult to prevent tenants from taking lodgers, even when they have got only two bedrooms. I would suggest that all cottages with only three bedrooms, in which the family occupying them consists of male and female children, should not be allowed to take in lodgers. Gardens are much appreciated and well cultivated, and they are generally of a good size. The labouring population generally are in a very satisfactory condition.

15. *Mr. George Hunt*, land agent, secretary of the Royal North Lancashire Agricultural Society.—There is very little in the county of Lancashire to which the Commission on the employment of children, young persons, and women in agriculture can have any application. Neither public nor private gangs are to my knowledge used in any part of the county. The light work done by boys is not injurious to them, but they are perhaps taken into farmhouses as farm servants rather too young; 12 is not now an unusual age, whereas it was formerly 14. The change is to be regretted. The practice of boarding and lodging labourers in farmhouses prevails to a considerable extent, but I frequently hear wishes expressed that day labourers could be procured instead, and I am often pressed to build cottages to encourage a settled agricultural population. I think the system of farm servants, although in favour with some farmers, under the impression that they can get more work out of their men, will be gradually abandoned. The farmers have great trouble with their men, and the men are so independent that they will not brook control. A labourer settled with a wife and family in a cottage is much more tractable, and you have a security that he will not capriciously absent in his employer and emigrate to another locality. The great question now, morally and economically, is how to supply a sufficient number of good cottages for the agricultural population.

16. *Mr. Jonathan Butler*, solicitor and land agent, Poulton-le-Fylde.—The only women employed in agriculture in this district are Irish; a few of whom have settled permanently in this parish, and others come in April and leave in September, after the harvest. They are well conducted, and work generally in company with their husbands. A man contracts to do a piece of work and others join him, receiving a certain sum per day. The scarcity of native labour here is so great that farmers could not get their work done without some such assistance. Children work a good

Lancashire.

Mr. Henry Tremenheere.

1 2.

deal at certain seasons of the year, but not in gangs, generally going with their parents to plant and gather potatoes, weed, &c. Plough-boys are used, the land being heavy; three and sometimes four horses are required to get the plough through the stiff soil. A boy of 12 years old is generally competent to drive a team of horses. They are seldom at school after that age, and often leave it younger. There is no "bird-keeping," but plenty of other employment for young boys.

The wages of an agricultural labourer do not here exceed 12*s.* a week the year round, and out of that he has to pay rent for a cottage. Most of the farmers have labourers boarding in their houses, but they do not depend entirely upon them. A farm servant gets from 15*l.* to 25*l.* a year, according to his qualifications. Land in the Fylde is generally high-rented, being very fertile. From 3*l.* 10*s.* to 4*l.* per acre is not an unusual rent.

17. *Mr. G. H. Porter*, master of the endowed school, Poulton-le-Fylde.—I have 80 scholars on my books, but the average attendance does not exceed 40, and half of the school are away for five or six months. None stay longer than 12, and many leave before 11. There is no payment, the education being given gratuitously, and my opinion is that on that account it is not appreciated. People think that what costs nothing is worth nothing. Quite one-third of the children in this parish do not go to school; the parents are so indifferent about it, and those who do attend school leave so early and are absent for large a portion of the year that they do not derive any benefit from it.

18. *Rev. G. W. Osborne*, perpetual curate of Fleetwood.—The only way in which children are employed in this place to the neglect of their education is in "cockling." There are from 30 to 40 children thus occupied for a considerable portion of the year. They are chiefly the children of Irish who here engage in this business. Their children are taken on the sands at about 7 or 8 years of age, and as they have received no education before that age, they certainly get none afterwards. None of them attend Sunday schools, and they grow up heathens. The language habitually used by these children proves them to be in a very degraded condition. As the sands are not resorted to in bad weather or regularly in winter, there is time enough left for some education.

19. *Mr. Richard Cookson*, Layton Hanes, Poulton-le-Fylde.—I farm an estate of 400 acres. There is very little female outdoor labour employed in this part of Lancashire. A few women may go out hay-making and harvesting, but not to any extent. I employ boys of from 9 to 13 years of age from March to September in occasional jobs, but there is plenty of time left for their education if their parents would take care they went to school. There is an endowed school, where they can get a gratuitous education for their children, but they are too often quite indifferent about it. I have six farm servants, whom I board in my house. The highest wages that I pay is 16*l.* a year, with meat. I pay day labourers 12*s.* a week, giving them work the year round. I prefer day labourers to farm servants, if they can be got, but there is a scarcity of labour. All my farm servants are Irish.

Boys enter farm service at 12 or 13. At that age they are only fit to do little odd jobs about the farm and learn, but we are obliged to get them young, or we should not get them at all. My farm servants live very well; five meals a day, and fresh meat twice a day. No beer is given, but only milk or buttermilk. The Irishmen prefer buttermilk if they can get enough of it. The people here are very well off for gardens and cultivate them carefully. They have no need of allotments. Cottages are being gradually improved. I know of none with fewer than two bedrooms, and many have three. There has been a great improvement in that respect of late years. The immorality in the parish of Great Marton, of which this is a township, was a few years ago very great. I have known as many as 38 bastardy cases heard at the petty sessions in one day; but since the improvement in cottages there has been a marked change for the better. I can speak with authority on this subject, being a poor law guardian.

We have no agricultural gangs in Lancashire. A few children may work together at times, but always under their parents.

20. *Mr. W. Knowles*, Lytham.—I rent and farm an estate of 250 acres in the Fylde. The employment of women in field labour is scarcely known in this part of England, and boys are only occasionally employed, as in potato setting and wheeling turves to the stacks, a short period in the spring and summer, leaving plenty of time for their education, for which the means are ample. The schools are generally endowed or supported by the funds of wealthy landowners, and the education given is almost gratuitous. There may be a few instances of neglect on the part of parents in availing themselves of these advantages for their children, but not many.

The scanty population in this district (the Fylde) places farmers under great disadvantages, and but for the assistance of Irish it would be impossible to farm at all. The wages of a native agricultural day labourer are 3*s.* a day, but few can be got. I pay my Irish labourers 2*s.* a day, and the work of my farm is almost entirely done by them for half the year. There are some thousands of these men, who take up their residence in the Fylde for a portion of the year. They are most efficient labourers, always cheerful and willing. "Pat.," I said to one of my men the other day when I wanted a little extra work done, "suppose "you work a couple of hours longer this evening "for an extra quart of buttermilk." "Anything to "please your honour," he replied; "I will work "all night if your honour likes, and take nothing for "it."

21. *Mr. Robert Hunt*, farmer, Bispham.—When I first came to this country 14 years ago, women could be got to work out; now you cannot get one, unless occasionally, and she will ask 2*s.* a day and her food. I rent and farm about 90 acres. Farms are generally small in the Fylde. I hold mine under six different proprietors. I have two farm servants living in my house; to one of whom, a lad of 14, I pay 6*l.* a year; to the other, who has been with me for several years, 16*l.*, with his board. My day labourers are Irishmen, of whom I employ four for six months in the year, and I pay them 2*s.* a day. They provide their own food, but are allowed a quart of buttermilk a day, and this with wheaten bread is their sole diet. They sleep in the barn upon straw. They are well-conducted, hard-working men, and I could not desire better labourers.

There are no cottages in this neighbourhood except in the villages, which are small, we are therefore obliged to hire farm servants. I should prefer day labourers if they could be had near, but not if they had to come from a great distance to their work. The landed proprietors generally are too poor to build cottages; it is only great landlords who can do that. Boys go out to service at 12 or 13, but they can get a fair education before that; if they do not it is the fault of their parents.

22. *Rev. R. B. Robinson*, vicar of Lytham.—There is no such demand for the labour of children in agriculture in my parish as to interfere with their education. The little employment they get in the potato season and in wheeling turves is no more than is good for them. The schools are well attended, and being almost entirely supported by private contributions or by endowments, the education is given almost gratuitously. There is no poverty, and owing to the sparseness of the population in the Fylde employment is always to be found at good wages. It is not the custom for women to "work out," except at hay-making and harvest, which they regard as holidays. Working in gangs is entirely unknown.

23. *Mr. James Fair*, land agent, Lytham, and manager of the estates of Col. Clifton, of Lytham Hall.—I have had nearly 48 years' experience of the part of Lancashire in which I reside, namely, the Fylde. It is a tract reclaimed almost from a state of nature within the present century, consequently the population is very scanty. There is a great dearth of

labour, and much of the land is therefore thrown into dairy farms. Land which 30 years ago brought only 5*s.* or 7*s.* 6*d.* per acre now lets for 30*s.* or 35*s.* Wages are from 2*s.* to 2*s.* 6*d.* a day, but a great deal of the work is done by Irish labourers who now receive 2*s.* a day. I remember the time when 1*s.* per day was the common rate of payment. They live chiefly upon bread and butter milk, the latter supplied gratuitously by the farmers. When I first came into this district few of the townships possessed either churches or schools, now they are general. A great many of the schools are endowed or supported by the contributions of resident proprietors, of whom Col. Clifton is an example; education in this district therefore is almost gratuitous. The old class of schoolmasters is gradually giving place to certificated masters, and the state of education may now be considered as decidedly satisfactory.

A great improvement is being gradually effected in the cottages of this district, the want of which has been long felt. The old cottages, of which many still remain, were built of mud and thatched, and few had more than two rooms. Those now building by Col. Clifton (who owns 40,000 acres in the Fylde) and the Earl of Derby have all three bedrooms, and slated roofs.

24. *Rev. James McIlwaine*, curate in charge of the parish of Hambleton, Poulton-le-Fylde.—There is at the distance of a little more than three miles from this parish a considerable extent of moss land, out of which a large quantity of peat fuel is dug early in the spring, and again about the end of summer. All the farmers in this parish, and many of the better class of labourers, have allotments of this moss, and some cart a large quantity of peat fuel for sale to the neighbouring towns. Part of this moss land having been drained and otherwise reclaimed, is now let to small farmers and others in this and neighbouring parishes, and grow annual crops of corn and potatoes, a large quantity of the latter being grown in this district. Boys are employed in agriculture in this parish at certain periods of the year from 7 years old and upwards, and about 20 girls from 8 to 16 years of age are employed in spring, summer and autumn in placing peat fuel to dry after being dug, making the squares into which the fuel is cut into small stacks and frequently turning them; and in weeding corn and potatoes. About a dozen women are also employed in the same occupations as girls.

I should be very glad, were it possible, if boys were not permitted to work until they are 12 years of age, and girls until they are 15.

There are two schools in this parish; a Church of England school, and a private industrial school, the payments at both of which are very trifling; but advantage is not taken of these schools to near the extent that it might be, which may be accounted for in some instances by the ignorance of the parents themselves, or by their apathy or negligence, and in not a few cases by the dislike of the children to learning, often caused by being put to labour too soon when they acquire a fondness for riding in carts when going and returning from work and to the conversation and companionship of grown-up people.

The cottages in this parish are chiefly of clay and thatched, and as a rule are in tolerably good condition, but they contain too few rooms and are overcrowded, and various cases of immorality have come under my notice in consequence. The ventilation of most of them is very imperfect. They have in general fair sized gardens which are well cultivated.

25. *Rev. W. Stratton*, vicar of Gressingham.—The state of the labouring class in this valley (the Lune) and neighbourhood is enviable, especially in this part of it, for the farmers are in want of labourers they can rely on. In this part of Lancashire the parishes which are purely agricultural are better off than any that I have seen or heard of. In many there is hardly a person receiving parish relief. In this union (Lunesdale) the rate is at present 1*s.* in the pound. The moral standard is peculiar. If a young unmarried girl has one child her character hardly suffers; if more than one it does. [This parish is on the border of Westmorland.] Again, men paying high rents, and most honest men, at the last election voted with their landlords, some openly expressing a difference of opinion, and not deeming they had a grievance.

In the vale of the Lune it is the exception to find women and girls employed in outdoor work; there is a great demand for them as house and farm servants, and wages are high.

Boys of 14 going to a farm can get their 7*l.* or 9*l.* wages. I find from my general observation that boys of 13 go to work with every advantage. The control of the master is good for them, and they are under a stricter discipline than at home. In my parish most of the young children (that is, under 13) are employed at home looking after the gardens or cows of their parents, and thus are getting some practical training without hard labour.

My own wish would be to see the employment of females in agriculture so restricted, that no woman or girl under 21 should go out to such work. But if the employment of females is inevitable there must be some other restriction than that of age. Females differ so much in constitution, that one is more fitted than another to labour. Could not the medical officer of the union examine and give or withhold permission for any female to work?

Parents are somewhat indifferent about education here; children are kept at home for any trifle, not because they are wanted for early labour.

The cottages are in very fair condition, especially those occupied by agricultural labourers. The great desideratum is cleanliness in the people. During the late cattle plague the inspectors had great power to compel cleanliness in the stable, and therefore I suggest that power to inspect not only cottages but small farms would be of advantage, even if there were no power to impose a fine. The visit and report of an inspector would spur the inhabitants to keep their homes clean and ventilated.

In this neighbourhood there are so many schools that if a boy cannot read and write it must be from his dulness or the neglect of his parents.

26. *Mr. T. Wilkinson*, farmer, Gift Hall, Garstang.—The wages I give to my men are as follows:—One man 22 years of age I give 22*l.* a year, and one old man I give 18*l.* a year; both of whom have board and lodging; two other men have in money 14*s.* a week each, with perquisites worth from 2*s.* 6*d.* to 3*s.*, thus making their weekly wages equal to 16*s.* 6*d.* or 17*s.* Two or three other men I employ occasionally have 22*s.* a week in hay and harvest time; at other times they have 12*s.*, with the liberty of going off in turf and potato-getting times. These are about the average wages given in this part of the county at present.

The supply of labour at some seasons is not equal to the demand. The labourers, with very few exceptions, are well-housed, have good gardens, and may be said to be well-off. When I first came into Lancashire, in 1851, the best yearly servants were getting only from 12*l.* to 15*l.*, with board and lodging, and married men, finding themselves, were earning from 11*s.* to 13*s.* with no additional privileges.

The agricultural value of land varies from 25*s.* to 45*s.* an acre, averaging about 35*s.* There is nothing of the agricultural gang system in this county, neither are women or girls employed much in out-of-door work. In turf and potato-getting times the father of a family generally takes his children to assist in dressing the turf and gathering potatoes.
